Natural Gas Supply/Demand Notice of Inquiry  
-----

Sender Name: David Blittersdorf

Company/Organization: NRG Systems, Inc.  
-----

Pay attention to geology. Your EIA division seems to be clueless in their future estimates of NG supply as they base the supply on demand requirements. Understand M. King Hubbert.

Quit cutting the wind energy R&D budget and triple it for each of the next 5 years. Wind can displace NG for electricity generation. Stop building CCNG plants. Too much demand and declining supply of NG is driving prices higher. Promote solar thermal for residential hot water and not NG. Make the solar tax credit permanent and at 30% without a \$2000. cap.
