Natural Gas Supply/Demand Notice of Inquiry

Sender Name: Inge Terrill

Company/Organization: Concerned Citizen

Please consider heavily your decision to pursue the new natural gas agenda. What this country needs are federal agencies that will look at the long term benefits and environmental health of the energy decisions that are being made in the name of progress and fulfilling energy demands. We do not need more short term (10-20 year) solutions for the energy needs of this nation. We already have safe energy alternatives. Why are we not pursuing them? This planet has been under attack for too long by narrow minded, short term, environmentally destructive energy programs. Please stop pushing fossil fuel uses (coal, propane, natural gas) and start pushing renewable energy. We can not put off the inevitable. The time has come. **THE TIME IS NOW!!**
