Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Joyce Niksic

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

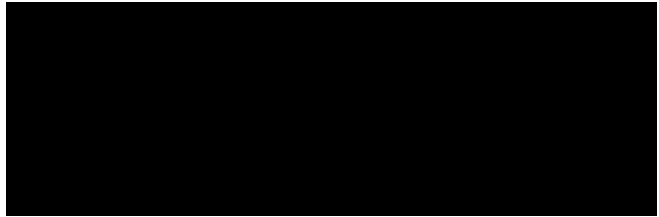

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, more needs to be done to understand the impacts of allowing LNG exports, AND to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking: the environmental impacts from increased fracking must be considered as part of your analysis.

Regarding evaluation of LNG export facilities, please update your analysis to reflect recent studies that show the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

With better knowledge of the full impacts of LNG exports, from the fracking process in the U.S. to the potential displacement of clean energy in importing countries, a more complete understanding of how LNG exports will affect our climate is critical.

Sincerely,  
Natalie Houghton

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

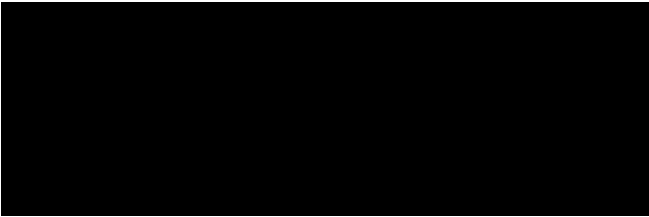

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Lynn Marquardt

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Kate Wilke

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Before you expand fracked gas imports, please look at the environmental impacts to our communities, to the air, to the waters, and to the climate. Fracking has caused damage to the environment with the increased number of earthquakes, the pollution of groundwater and air purity, and to the health of the people who live near the fracking sites. Please take your time and research this well. Thank you for your time.

Sincerely,  
Marsha Elston

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Jennifer McNeill

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Janet Parks

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Elizabeth Lamers

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Would you agree to something life changing before you knew all of the details? For years, the Department of Energy (DOE) has been doing just that when it comes to fracked gas exports. They call it "conditional approval" -- meaning a liquefied natural gas export facility is approved to move forward without knowing the environmental impacts to our communities, air, water, climate and coasts.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

You, Secretary of Energy, Ernest Moniz, need to take a look at the big picture when it comes to proposals for fracked gas export facilities. All details need to be known before you approve any liquefied natural gas facility to move forward without knowing the environmental impacts on any "condition". No "conditional approvals" allowed. I am watching you and your department and what decisions you make. Make them in favor of our communities--not in favor of the pressure and bribery money the Big Oil and Gas Companies are using to influence your decision.

It's time to look out for the welfare of all the citizens of the United States--not just the wealthy and they wealthy excessively profitable Big Oil and Gas companies. They should not, by the way, be receiving any subsidies from the government. I do not want my tax money used to subsidize them. It is welfare, by definition, to the richest companies in the U.S. Yet, they look down on those citizens who really need assistance to survive because of their lack of ways to earn enough to

cover their basics. This is bullying and name calling and beating people down in the worst way. And the government thinks n  
Do you think this is truly the way it should be? I don't.

Sincerely,  
Kay Beams

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical. Another point often overlooked is the shortage of inspectors on these fracking sites. We need more inspectors and more inspections to ensure a safe environment.

Sincerely,  
Valborg Freyholtz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

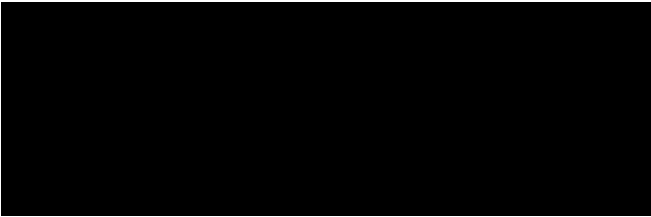

Although I am glad for the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, MUCH MORE IS NEEDED to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand.

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, PLEASE UPDATE YOUR ANALYSIS to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Donna Davis

It is also critical that you evaluate the health studies which are now beginning to come out which are looking at the impacts of this activity on local populations, and the birth defects that are occurring to woman as well as to animals and to livestock (Colorado Study), as well as its effects on our children and the population of our future .

As this activity is not occurring in a few isolated areas, but actually moving into towns --affecting neighborhoods, farms and forests as well as the people-- throughout a broad area of our country, the decisions you make will impact the lives, living conditions, and future health of millions of our residents across large swaths of our country -- especially in the more densely developed northeast.

As suitable locations for deep well injection get used up, we are also creating the potential for myriad Love Canal's and localized toxic waste issues. None of the above even begins to address the impact this industry has on local water supply and the fact that we have developed our land in ways which have paved over aquifer recharge areas and the aquifers we rely on for our water can no longer adequately recharge. Where is clean water for present and future generations going to come from?

In addition, along with a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- it is critical that we have a more complete understanding of how LNG exports impact our climate.

Sincerely,  
Louise Usechak

You must look at what "fracking" does to the water supply, and the possibility of induced earth quakes. The evidence is clearly against this process if we want to maintain a water supply useable by the population and our animal live stock.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Bruce Lowrey

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
John Reynolds

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

We must be wise in our decisions and actions by taking into account the impact on the next generation of human beings. Without looking at the big picture and taking into consideration the cost of human health and productivity, our whole country could become a contemporary version of Victorian London with its polluted air and water and diseased population; our country could become the world's industrial zone with disastrous consequences.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Deborah deForest

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Mariah Branham

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Kimberly Wylie

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I live in Lancaster County and we are apparently going to be "hosting" the Williams Co., which is supposed to install part of the Sunrise gas pipeline. There is much opposition and grief about this apparently done-deal, which risks to threaten our environment due to our well documented earthquake activities, our precious land (much of it is preserved), water, and old forested areas.

Additionally, Williams has a TERRIBLE safety record, with many disastrous accidents. It is unfathomable and unconscionable that our government would allow unfettered access and permission to risk damage/ruin to our pastoral way of life, lives, land, farms, and natural resources. Our Susquehanna River empties into the Chesapeake Bay, which is a critical water supply, wildlife habitat, bird nesting and flyway, and fishing supply - ANY damage to the Bay would be disastrous. We are decades of cleanup and management into finally restoring it back to health.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production and transmission.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Elizabeth Townsend

Ernest Moniz

Subject: Environmental Reviews clean water, and LNG

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed!

It is your duty to understand the impacts of allowing LNG exports and to protect US communities from the dangers of increased fracking.

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

You simply cannot allow any increased fracking for any reason - and least of all while there is no present way to store all the natural gas being harvested for either domestic or foreign demand. All infrastructure should be required to be completed for storage and so called "flaring" eliminated 100% - actually before any fracking is allowed - and indisputably before foreign demand is considered.

Do not make the US into a 3rd world dumping ground of the toxic wastes used in tracking. Least of all to enrich a few while depleting the most valuable resources we have and putting not only our water supply at risk, but possibly that of the globe.

It's just not worth it!

Sincerely,  
Terry Jeanne

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Richard Riger

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Please consider the whole picture when you consider conditionally approving liquefied natural gas export applications. The whole picture includes all the toxic fracked slurry water that is being transported and stored all over the country in re-fitted injection wells that leak into the surrounding community's ground water with dangerous results. Also consider all the additional pipelines and tankers which will be needed to transport the fracked gas through communities all over the country in order to get it to export stations. Also consider all disruption of communities when the extractors ramp up their 24-hour operations all over the country to blast out this fracked gas so it can eventually be exported. Please consider that there are newer, safer, cleaner ways to obtain energy.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.
