

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Harvey & Lynn Lyon

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications. However, given how much damage is being documented arising out of fracking to obtain oil and gas, MUCH MORE is needed to understand the impacts of allowing LNG exports, and strong measures need to be put into place to protect communities from these dangers.

It is simply ridiculous to allow thousands of people, whole areas of the country and cities to be destroyed due to increased fracking, only in order to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Please listen to the many who see the dangers in fracking

Sincerely,
Susan Toner

Ernest Moniz

Subject: Personally affected-Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I live on well water on the Triassic Basin in NC where the state legislature has stolen \$1million in taxpayer money to entice the frack industry to come and poison our water, air and land with toxic fracking keeping secret the chemicals and overriding local county moratoriums on fracking! This is unacceptable, especially withthieves like Halliburton, Exxonmobil, Shell (Southwestern Energy trade group coaching our Mining and Energy Commissioners on what THEY want!). I can provide hundreds of articles showing the destructive nature of fracking where it is in process. Please read them all yourselves before you even consider selling citizens out to these polluters. We should have been on solar, wind and geothermal years ago. Gas is a "bridge to No Where"

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Ernest Moniz

Subject: Environmental Review of LNG Export Applications

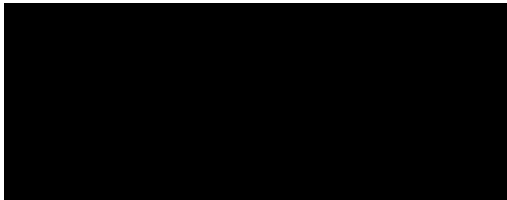

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

U.S. citizens are sick of their general welfare taking a back seat to corporate welfare--and in this instance, it IS welfare. Corporations take for themselves, but offer little in return while the general population picks up their tab!

Sincerely,
Carol Dodson

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Orlando Olmo

Our entire region, here is south-central Texas, has been horribly hurt by the fracking boom -- people being sickened by toxic releases, water polluted, farms being made unusable, roads destroyed by heavy machinery traffic, and smog from the entire boom affecting communities downwind, so much that ozone levels have become dangerous in one of our most populous cities.

If the U.S. is going to continued to extract natural gas, it is imperative that we should allow extraction ONLY for the benefit of our own people. As coal is being phased out for energy production in the U.S., our national policy should be to be careful stewards over the oil and natural gas, to be sure it lasts long enough for the country to transition to other sources of energy.

We need to have all energy extraction (including gas/oil/coal/and uranium) much more carefully regulated to eliminate all negative effects on human health and on the well-being of communities where the extraction, pipelines, refineries, and shipping occur.

Sincerely,
Meredith Mcguire

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Kelly Wilkie

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Jonathan Memmert

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Fracking is an unproven technology, therefore the precautionary principle should be in place: prove that it will cause no harm. Exporting fracked gas turns the US into a raw materials "colony" of other economies. We reap the environmental degradation while large corporations make the money. Bad policy, bad idea!

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Ken Larsen

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Joy Johnston

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

resident Obama and most of the Senate, Congress, Governors, state and local politicians are Christians. Christianity teaches that God created the natural world (garden of Eden) to last forever in the pure form that it was created. It is the responsibility of present day Christians to adhere to what their God's original plan was. Solar, wind and others can meet all of the earth's energy needs and do it with more harmony to the original garden of Eden. Christianity also believes Jesus will return one day. Jesus will want to see the leaders honoring God's original plan.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

When Uneducated decisions are made hastily by individuals not in the industry, mistakes are often made in the pursuit of short term profit at the cost of long term damage to everything involved. Natural gas is deemed as less of a threat than coal, but when you look at the broader picture the threats from Fossil Fuels and their arbitrary extended usage when there are much more reliable, efficient, and profitable ventures such as hydro, electric, solar, wind, magnetic and other natural resources that are provided for us by the planet that sustains our very existence. We need to learn to work in unison to prosper on this world instead of attempting to work against it to profit for ourselves in our fabricated societies of falsehoods and anguish.

The dangers associated with Fracking and Natural Gas exports are wide reaching, damaging the communities and others involved in the process of its creation and shipment.

It is simply this: One must work with what sustains our lives, for if you work against it, you are merely working against yourselves.

Canned Statement Below:

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Barbara Regan

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Living in Utah where the state and the county governments hate all regulation on energy production, I rely on the Department of Energy to watch out for my health. Thanks for the DOE proposal to stop the conditional approval of LNG exports. Please do more to learn about and protect communities from the dangers of increased fracking before we export more LNGs for foreign consumers. Please consider the environmental impacts of fracking in your analysis. The EPA now thinks it has significantly underestimated the amount and potency of methane leaks during gas production and I am increasingly reading about earthquakes caused by fracking. We must rely on our government agencies to force clean energy production. Business as usual, ignoring the impacts, gets us deeper and deeper into climate change AND earthquakes, man made. Help us!

Sincerely,
Nelda Bishop

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Deirdre Weliky

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Alex Graas

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

The Department of Energy needs to approve more liquefied natural gas (LNG) export applications, allowing LNG exports will help our balance of trade and provide clean fuel to developing nations. There have been no definitive studies to show that fracking is cause for environmental concern. The art of fracking is allowing the US energy industry to become an exporter of natural gas and oil and help make the US energy independent and not have to rely on the Mideast. It will also help to break the hold Russia has on the European energy market. These are good things.

Given the present 'clean energy' technologies none can meet the demands of the US or the developing world. Until some form of new nuclear technology is developed we will be dependent on the hydrocarbons for most of our energy needs.

Please move forward with your plans to approve more of these LNG facilities.

Sincerely,
John Corrent

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Philip Ciaffa

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Currently we (America) are exporting fossil fuels (in massive amounts). The sole purpose of these exports is so that the fossil fuel can be burnt. Thus adding CO2 to our atmosphere and increasing the Global Warming we suffer. This makes absolutely no sense! We get the Global Warming without even having used the energy to drive cars or air conditioning or cooling.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. And if I may add a personal note. Right now Kinder Morgan is proposing to build a natural gas pipeline that will cross the length of Massachusetts from the New York state border to the city of Dracut. The proposed route will cut through farm land, state forests, conservation lands and water shed areas for many of the 45 effected communities. The amount of gas this pipeline will carry far exceeds any "reasonable" estimates for New England's future energy needs. The "hidden" goal is for LNG exports. When you add up the damage done from fracking wells, new pipeline construction, to the building of new or expanding current LNG export facilities, natural gas is neither cheep nor environmentally green. It is what it is ... A FOSSIL FUEL Any project which will increase our dependency on this kind of energy and heighten the climate change problem (both here in the US and abroad) needs a very careful and through evaluation without undue influence from companies whose major concern is for profits and their share holders rather than the common good.

Sincerely,
Nancy Mcrae

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Jeff Lowry

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

The lack of oversight or concern about what fracking is doing to this country will cost us dearly in the future. Oil train explosions, salt water spills, unknown chemicals dumped into the ground that will enter our aquifers some day is criminal.

More serious regulation of an industry that has this country needs to be applied to all aspects of the fracking process including LNG shipments. Do something for us before it's too late. Roseanne Grosso

Subject: Personally affected-Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I live on well water on the Triassic Basin in NC where the state legislature has stolen \$1million in taxpayer money to entice the frack industry to come and poison our water, air and land with toxic fracking keeping secret the chemicals and overriding local county moratoriums on fracking! This is unacceptable, especially withthieves like Halliburton, Exxonmobil, Shell (Southwestern Energy trade group coaching our Mining and Energy Commissioners on what THEY want!). I can provide hundreds of articles showing the destructive nature of fracking where it is in process. Please read them all yourselves before you even consider selling citizens out to these polluters. We should have been on solar, wind and geothermal years ago. Gas is a "bridge to No Where"

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand.
