

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Belinda Langner

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

It seems to me no one agency is looking at the big picture here. Fracking is harmful to the environmental in many cases. Is that risk worthwhile at this point in time? For the most part, the LNG being produced is exported; perhaps no meal in America will be cooked on the gas being produced at great risk. Fracking has shown in some instances people can cook their dinner by lighting their tap water. If that would be considered acceptable at your house, then it's understandable why DOE has previously hurried through the export application process.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Latham Horn

Dangers to the areas around LNG ports are evident - leaking methane and the constant risk of explosions with catastrophic results.

Sincerely, Jill McManus

IN FACT THE ENTIRE PRACTICE OF FRACKING CAN BE REPLACED WITH A FAR LESS HARMFUL PRACTICE TO THE ENVIRONMENT CALLED REVERSE MINING. THE ONLY PROBLEM IS THAT THE CORPORATIONS WHO USE IT HAVE IT PATENTED. THEREFORE, SOME WAY MUST BE FOUND TO CIRCUMVENT THAT SITUATION AND ALLOW THE PRACTICE TO BE MADE AVAILABLE TO ALL..

Sincerely, Richard Firth

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Sincerely, Paul Hofheins

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications because much more is needed to understand the impacts of allowing LNG exports and much more is needed to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production. This is a serious environmental risk.

Other risks of fracking include destabilization of land causing hundreds of earthquakes and/or sinkholes in states where fracking is done, contamination of the aquifers affecting availability and safety of water, and damage to wildlife habitats essential to our food chain.

I urge you to undertake full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries. This is critical for an import/export decision that works well here and abroad, and is safe now and for the future.

Sincerely, Peggy Yates

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Jo Dolittle

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Hans Wiegert

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Jeannie Smith

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Maggie Hagen

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Thomas Nash

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Barbara Lalonde

Fracking produces a short term gain for some, and results in long term pain for many. Every activity in a finite system has limits to its growth, and human activity is approaching its limits in this world of ours. As we run up against these limits our life style must revert to a more basic one, and access to local food and water will be critical. Fracking could seriously degrade this for many for a very long time. The long term pain so exceeds the short term gain that it clearly is not in our best interests, as should be apparent to anyone.

Sincerely, Donald White

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I am for the Department of Energy's proposal to end the practice of unconditionally approving liquefied natural gas (LNG) export applications, more research is needed to find the best way to regulate the impacts of LNG exports, and to protect communities from the dangers of increased fracking to meet foreign demand.

According to DOE's own analysis, exporting fracked gas will lead to more fracking, and the environmental impacts from increased fracking must be carefully considered. I might add that the industry, under pressure from irate citizens whose property was contaminated by fracking activities, stated that once there was enough gas to serve the domestic market, the fracking will stop. Now, we find that the fracked gas is intended for foreign markets, in spite of industry statements to the contrary, and that more drilling is being considered, putting more residents at risk. What are we to think of an industry that lies only to placate people, and then does whatever they want?

When evaluating LNG export facilities, please update your analysis according to recent studies which show that the EPA has underestimated the amount and the potency of methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the environmental hazards of the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more thorough study of how LNG exports will affect our climate and our environment is critical.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications...Cove Point

Dear Ernest Moniz,

I live 1 mile from Dominion's Cove Point entrance.....Please read this article that was written by a local volunteer fireman..

Cove Point Is Too Dangerous Mickey Shymansky 7/9/2014

I'm a firefighter, not an activist or an environmentalist. I've been a firefighter for 30 years. I am a captain in the District of Columbia Fire Department, and, until recently, I was the assistant fire chief in charge of operations for the volunteer department that serves my hometown of Lusby, Maryland--the Solomons Volunteer Rescue Squad and Fire Department.

But I could not keep silent when I learned how dangerous the proposed liquefied natural gas (LNG) export terminal at Lusby's Cove Point would be, and when I saw how far from seriously its owner, Dominion Resources, is taking fire safety. Cove Point would be a firefighter's worst nightmare.

At first I thought that transforming Cove Point from an inactive LNG import terminal to a very active export terminal would bring some needed jobs to Calvert County. But then I went to a meeting that Dominion held for fire department leaders in the region this past January.

When you've fought fires for as many decades as I have, you know fire-safety irresponsibility when you hear it. Dominion proposes to build a 60-foot-tall wall between the terminal and the subdivisions right next to Cove Point. In public, the company says it would be a "sound wall" to protect the hundreds of neighboring families including my own from the deafening noise of the terminal's proposed power and cooling plants.

But at the private meeting, one of the Dominion officials told us that the wall is also intended to function as a firewall that "should" -- in an accident -- direct a leaking natural gas cloud or fireball up sixty feet in the air, high above the subdivisions, allowing people within the one-to-two mile impact zone to safely evacuate.

I was floored. Natural gas isn't that cooperative. Where it gathers, it displaces oxygen, so if you aren't wearing protective gear to allow

you to breathe, you'll asphyxiate and die. As it warms, any liquefied gas that escapes will become a cloud, and it could ignite. If even a fraction of the millions of square feet of the gas (which is mostly methane) that Cove Point will process daily catches fire, the explosive power would be catastrophic. No wall could contain that.

And even if the wall somehow survives the blast and the burning cloud stays 60 feet above the ground, the fire's heat would radiate downward hot enough to fry hundreds of homes and to ignite flammable sap in trees. Roads would rapidly be blocked with debris, and the fireball would suck in oxygen, causing evacuating cars to stall and people to asphyxiate.

When I asked the Dominion official, during our January meeting, to justify the company's "firewall" fantasy, he changed the subject.

If this is how Dominion does its safety planning, everyone who works at or lives near the Cove Point terminal is in real trouble.

Dominion clearly knows that LNG and Cove Point are dangerous, but they are hiding it. They claim to have provided Solomons FD with specialized training, but that was at least three years ago, and there's nothing on the calendar. They asked Solomons FD to submit a "wish list" of equipment, but they haven't followed up, not even to discuss it.

The proposed Cove Point terminal is too dangerous. It is too close to too many homes. It must be stopped.

But if the powers-that-be continue to smooth the way for its approval, we need far greater emergency response capabilities in Calvert County than we presently have. Our local firefighters are all volunteers with day jobs. Oftentimes we can't even fill one fire engine crew. That may be fine for house fires, but this?

Solomons FD has limited capability with hazardous materials (HAZMAT), and the county sheriff's HAZMAT team has to cover serious mileage to get to a scene. When a private plane crashed this past winter and leaked fuel, it took 90 minutes for them to arrive.

So far Dominion refuses to do the responsible thing: to provide its own full-time HAZMAT-capable fire department at Cove Point, on duty 24/7. Indeed, Cove Point used to have its own fire department but Dominion canned it to cut costs.

I'm still a volunteer and I'll go in if I have to, but I could never in good conscience send my courageous but understaffed and under-resourced colleagues into an emergency at the new Cove Point. Dominion must see that it would be like fighting a dragon with a butter knife, and we would lose.

Mickey Shymansky, a captain in the District of Columbia Fire Department, was Assistant Fire Chief of Operations for the Solomons (MD) Volunteer Rescue Squad and Fire Department from 1991 to 2002 and from 2012 through April.

350 homes, of which I am one, east of Dominion's entrance have NO EVACUATION ROUTE if there is a catostrophic event.......

Sincerely, Eleanor Callahan

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Nancy Grosfeld

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Laine Whitcomb

There are plans to do some fracking in Naples Florida which is close to where I live. Where the site is located is close to homes and a panther sanctuary. Please understand and do something before we mess up our planet even more....

Sincerely, Carol Miller

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Jeffrey Miller

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Frank Kelly

The damage to our climate should be your first concern. LNG production and

regasification are extremely inefficient and polluting not to mention dangerous. Almost every process step releases and vents methane. This step cannot be justified in a our future and its pursuit is sadly business as usual and business for business sake...

NOT for the sake of humanity and our planet.

Sincerely, Martha Girolami

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Gary Davis

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely, Ronald Gall

Ernest Moniz
