Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Amanda Slepski

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
S Raviv

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Paula Jarrett

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sandra Severt

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Pamela Bosco

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Robert H. Feuchter

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Greg Paxton

Subject: Fracking is plain bad...

Dear Ernest Moniz,

I live in KS and we frequently have earthquakes up from Oklahoma's fracking. Oh, fracking doesn't cause earthquakes? According to Scientific American, Oklahoma has seen more than 230 earthquakes registering magnitudes of 3.0 or higher in this year alone. Before 2008, the state only averaged one of these earthquakes a year.

Some 2,500 earthquakes in Oklahoma linked to fracking

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis. We didn't elect our representatives to support American business without regard for the impact on ALL Americans, in terms of health and the quality of OUR environment. If a process threatens our most basic privilege, to be able to drink groundwater that has not been exposed to contaminants THAT COULD BE PREVENTED, then that process (FRACKING) must be challenged, questioned, examined, and possibly prohibited. I'm a single voter and devoted citizen. I am trusting you to do your job and review this situation before an entire industry has gained so much momentum that it will be unstoppable, TOO BIG TO FAIL, and most sad of all; NORMALIZED. Fracking, as a means to a financial end, is a bad deal for us all. And we now will set another crappy example for the rest of the world.
WHERE IS THE LEADERSHIP?

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, the Department of Energy needs to completely stop supporting all energy development that promotes climate instability, the destruction of water, soil and air quality, and private gain at the expense of the common good.

Specifically, when it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

Fracking hurts our climate. It increases weather extremes, which results in higher energy demands. It helps the rich get richer, and makes the poor and middle classes more vulnerable. The DOE is part of the government, entrusted with protecting the common good.

Please, protect the common good, and stop all fracking work immediately.

Sincerely,
Will Phinney

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Carol Siemaszko

The fact that the E.P.A. has utterly failed in its obligation to review this at the source. Not even requiring that companies engaged in hydraulic fracturing reveal the contents of the fluids they use is totally irresponsible. Please do not compound this failure by permitting these companies to export materials they are recovering by injuring the communities in which they operate.

Sincerely,
Philip Murphy

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Shirley Johnson

HYDROFRACKING

The problem is no one trusts private corporations to do the right things when it comes to protecting the environment or human life or our right to know so we can protect ourselves. Nor do we trust our elected officials since they can be bought and controlled through campaign contributions and lobbying. It has become very hard to judge and understand the rules and regulations needed to control this process since knowledge of the process is secret. We do not know: how to nondestructively test and monitor the wells, what to do with the waste water and if it can be recycled without the flowback water becoming more toxic with each reuse, how to capture the released methane, what to do with the released radon gas, what chemicals are involved and if they are being stored in a safe and secure manner. Recently, we have learned that the process can cause low intensity earthquakes this has been documented as occurring in England, Oklahoma, Nebraska, Ohio, Texas and perhaps other areas. The U. S. Geological Survey has reported a sudden rise in the rate of 3.0 magnitude and greater earthquakes in areas where hydraulic fracturing of shale layers and deep hydro-waste storage wells occur. EPA has issued a finding that the chemicals used in the hydrofracking process; as well as, methane can leach or leak or otherwise find a way into water supplies, wells, aquifers and streams. The United States Center for Disease Control and Prevention and doctors across the nation have called for a moratorium on fracking pending further research into the effects of injecting hydrocarbons such as: petroleum distillates, naphthalene, formaldehyde, benzyl chloride, volatile organic compounds and glycol

ethers deep into the earth. Of the 353 chemicals presumed ingredients, 60% can harm the brain and nervous system, 40% are endocrine disrupters and 30% are both suspected carcinogens and developmental toxicants. Those who have studied the fracking is seen and measured its effects have identified seven major impacts industrialization of rural areas; clearing and fragmenting woodlands wetlands and grasslands; introduction of urban air quality and pollution; evacuation of communities due to accidents and lack of safety; the disappearance of fresh water due to the huge volumes needed; the long term bio-accumulative effects of RADIUM-226 (1/2 life 1,600y) which neither the state, nation nor world is equipped to handle and in the end the gas will run out but the environmental and ecological damage will remain.

Sincerely,
Keith Loomis

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Chervine Lamb

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Once again, I can't believe this isn't totally obvious to everyone - we can't keep screwing up the environment for the sake of shareholders! Please - do the right thing and make corporations sweat the details. Who cares if they take their business elsewhere? The oil isn't going anywhere. It'll be waiting there for a responsible, ethical, eco-friendly company to pull from the ground. Good lord, man! This is straight-up madness. Do us all a favor and be the sane one.

Sincerely,
Steven Vaccariello

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Dennis Isselmann
