Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Christopher Sullivan

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I would like to move back to central Oklahoma but because of the amount of fracking going on I am hesitant. The state is now averaging more earthquakes than any other and this is not a good way for anyone to live. My kids and grandkids are there and this scares the heck out of me. I've been told from a firm that pumps the "treated" water into the fracking sites that this is probably what is causing all the earthquakes. Don't bury this issue, please take action.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Leslie Roeder

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I am very concerned about environmental practices that causing great harm to our planet to those who live on it. I have an Associate of Arts degree, emphasis in Journalism, and a Bachelor of Science degree in Communication and use my knowledge to benefit others through education and correspondence.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Wayne Darlage

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Gary W Munroe Sr

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Ellen Adler

Since our government was purchased by Energy Co. CEO's and owners we have no idea 'WHAT' chemicals are being pumped into our aquifers and no environmental impact statement is required to do so. At what point does the health and welfare of 'the people' come before the profits for a few wealthy individuals? Oh yeah, I forgot...corporations are 'people' too now. The wanton pollution for profit is simply a byproduct of a profoundly corrupt government whose supposed mandate to protect it's citizens is only a mild irritant to a few wealthy fossil fuel magnates . It's waaay past time for the EPA to live up to it's title and "PROTECT" the environment.

Sincerely,
Robert Jett

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Fracked gas profiteers want to squander our alleged "100-Year Supply" of gas TODAY, in hungrier international markets - converting our continental patrimony of energy reserves into cash in their own accounts... TOO BAD, for the rest of us!

At the very least, DOE should promulgate a COMPREHENSIVE environmental impact statement, accounting for the NET BURGEONING of greenhouse gas emissions liquefaction would trigger. Studies indicate that fracked wells themselves, on average, LEAK 30% of their methane, directly into the atmosphere - TRANSCENDING the greenhouse gas effects of combustion of the marketable 70%, BY ORDERS of MAGNITUDE! ...So presumably, the direct emissions of a liquefaction plant itself would be inconsequential, by comparison. The real harm would result from money-crazed FRACKERS, GONE WILD, grasping for all that loot! Furthermore, since we don't really vet, or closely supervise, the quality of fracked well operators - and their investors see only Return on Investment, as THEIR holy grail - why WOULD investors favor ethical, "best practices" drillers, when those who cut corners at every opportunity are permitted to persist in the business? Bad operators tend to cut off the oxygen to the good guys, and the race to the the bottom is on. Gas in the ground is a beautiful thing. We should PRESERVE as much as possible, for future reference.

Any thorough and credible examination of the impacts of the liquefaction agenda will demonstrate critical harms to the environment, as well as undercutting of clean energy initiatives. I urge you to hold all aspects of such operations up to rigorous scrutiny. The petro-profiteers' interests are not the only ones that you need to represent, here. Citizens of the USA having a survivable environment should count for something, too!

Sincerely,
robert Parshall

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Robyn Mccrea

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
R Clay

I live in Southeast Ohio and we are being "Fracked to death." Pipelines, well pads and refineries, going in everywhere. They are moving so quickly no one can know what the real impact will be to our area until it is too late. And for what, so our country is raped of its natural resources, so they can send the products overseas? What will be left for future generations? NOTHING!!

Sincerely,
Ellis Freeman

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Betty Sabo

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Marcie Nepo

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Nancy Carl

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Please insist on a complete environmental impact study of the proposed Cove Point LNG export facility. This facility is driving the proposed construction of a new gas line that will cross the tributaries to Loch Raven Reservoir impacting Baltimore's drinking water, and require clearing a treeless corridor across Baltimore County's largest forested park at Oregon Ridge.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Bruce Johnstone

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Frankly, I find energy exports a ridiculous idea. In this age of energy concerns, we should be sequestering all of our potential energy for future needs.

I appreciate your consideration in this matter.

Sincerely,
Justina Cotter

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I appreciate the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications. However, much more is needed to understand the impacts of allowing LNG exports, and it is imperative that our natural areas and communities are properly protected from the dangers of increased fracking. The premise of allowing these companies to go ahead without an full understanding of the impact because the natural gas is needed so urgently here does not apply anymore, since it is only to meet foreign demand!

DOE's own analysis makes it clear that exports will cause additional fracking. The environmental impacts from increased fracking must be considered as part of your analysis.

The evaluation of LNG export facilities must be updated to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

Furthermore, the environmental effects of fracking and the chemicals used as well as those released into the water, soil and air during the process need to be better understood. The impact of fracking on seismic activity must be evaluated.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Maria Minno

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Vera Taylor

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

As a New Yorker who experienced the effects of Hurricane Sandy, it is clear to me that climate change is becoming a reality in all of our lives. The responsible and economically beneficial thing to do is to focus on creating alternative energy solutions.

It is time that government is forced to examine the energy cost of their projects and where that energy is coming from. Maybe then America will catch up with other nations in sustainable energy technology and make it available for everyday life.

Sincerely,
Elise Baker
