Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Robert Stout

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Jacklene Spector

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Richard Owens

Such radical interference with the earth's structure without fully understanding of what fracking does may cause irreparable damage which will impact future generations. I grew up in a time when people poured used oil down the drain and many neighbors in the community died from cancer due to factory pollutants in the local stream in Connecticut. Lives cannot be brought back.

Thank you for your consideration of this complex matter.

Sincerely,
Lydia Kowalski

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Eliha Jacobe

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Holly Bolt

We live in the Hudson Valley and I serve a church in Saugerties, and we are very concerned about shipments of gas via rail, ships and pipeline through our region, and New York continues to maintain a moratorium on fracking until more studies are done. We have a summer cottage in PA, not far from many gas wells and where we've heard of many cases of well water contamination. The truth will out, and you need to speak the truth, not what the gas and oil and coal companies tell you to say.

Sincerely,
Edward Schreiber

I lived in the Bay Area during the 1989 earthquake. People lost wells due to fracturing of rock strata. Fracking intentionally shatters layers of rock with the idea that more flow is good, it is aimed at a single purpose. If we ruin or pollute wells across America, we have cursed rural land for generations. The DOE and EPA need to scientifically evaluate the effect of gas and fracking fluid on underwater supplies, with the public review that proper science and public health demand.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Mary Leslie

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Melinda Reidinger

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Margaret Sweeton

An analysis of the impacts of fracking on local communities would also be appropriate. The impacts to be studied should include air and water contamination, illness, reduced fertility, and death of livestock, illness of nearby residents, damage to roads, and the increase in demand for police, fire, and other emergency services. These are costs to our communities that should be weighed carefully against any benefits to corporations of increased exports.

Sincerely,
Carol Hay

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sean Allen

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

In addition to the prepared message below, I would like to add on to from an engineering standpoint. Fracking has been shown to destroy water supplies. Wyoming successfully sued because they found multiple chemicals especially Butanol that was in the drinking water at 50 times than the safe limit, and they were able to point it back to fracking. While other's may claim that fracking has no harm, I know for a fact that there is harm. Although the technology is suppose to go well below the water table, that doesn't mean it wont disturb the water table above it. There has been many opponents to fracking and I have scene 2 shows on HBO that have also discussed their problems after fracking had come to their area. They day the fracking industry found that people can light the water coming out of their sink on fire, is the day all fracking should have come to an end, While many companies buy people off and force them to sign non-disclosure agreements so that they can't talk, doesn't mean the problem doesn't exist. One day they won't have enough money to buy a person off and eventually their will be a class action law suit. Me on the other hand, I am more than willing to start pointing my finger towards government. The government was designed to protect the people from harm and lately you guys haven't been doing that very well. Big business is trying to take over Washington, and I refuse to let that happen. So think carefully when you decide to let fracking take place, because I can tell you I have shown a lot of evidence to a lot of PhDs at my local university that shows the harmful effects of fracking, and I try and spread the word and show the results as much as I can because they are trying to bring fracking to Colorado. While I drink only Aquifina anyways, but that is because the city is adding harmful chemicals to the water supply. So if my water gets tainted it affects me less, however, I still have to shower with this water. Be prepared for the consequences when you make bad decisions for American's. There is a lot more of us, than there is in big business.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Evelyn Palder

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

We need now to be investing in the kind of public understanding, mobilization, and new kinds of supportive infrastructure that will allow us to rapidly reduce all our emissions and transition to clean and renewable energy sources to restore the planet's natural energy balance for the health and well being of the biosphere and all life, current and future.

This requires leaving 'unconventional' fossil fuel sources and most remaining coal in the ground, beginning yesteryear already! You know this, right?

To keep Earth's temperature to what scientists are now recognizing as necessary to stabilize the climate and other effects due to already too high cumulative ghg levels within the atmosphere -- to keep temperatures within the Holocene range of temperatures, we must ACT NOW to rapidly reduce carbon emissions - and NOT be expanding our extractions and use of fossil fuels!, to prevent a warming over the base used by these scientists of anything much more than 1.1 degrees C. (They now are able to determine with new data and models that warming of 2 C would have disastrous consequences... see Hansen, et al). This means all fossil fuels!! including gas.

We must be courageously honest and forthright about this and include the climate impacts and costs any form or phase of processing, transportation, and use of all kinds fossil fuels will have in the biosphere, acutely and long term.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how

LNG exports will have on our climate is critical.

Thank you for taking on the responsibilities on behalf of all living things and the intricate healthy functioning on the entire biosphere upon which we all depend.

With encouragement for you,

Sincerely,
Margy Halpin

ALBANY NY IS A SMALL CITY WHICH has gone from receiving almost no crude oil shipments to approximately 200 rail cars carrying 6 million gallons of highly explosive crude every day. These rail cars carrying the oil are called DOT-111's and US regulators have known for 20 years that they are not suitable for flammable cargo. Originally used to haul such substances as corn syrup, the regulators have done nothing to require a safer railcar. A member of the National Safety Transportation Board has stated these rail cars carrying the Bakken crude from North Dakota are an "unacceptable public risk,"
