Ernest Moniz

Subject: Environmental Review of LNG Export Applications

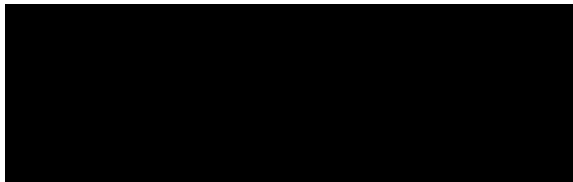

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Anthony Palombo

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Christina Courtenay

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Mercy Drake

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sheryl Petri

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Sad that the Obama administration didn't close the Clean water Act loophole that Cheney opened on Day 1 of his presidency, and that democrats haven't demanded it. No trust, no respect - just walking all over Americans lives to make the rich richer. You might as well all just be republicans - we can't tell the difference anymore, so that's how we're going to vote.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Fracking just does not make sense. Fracking to export gas to other countries is a betrayal of the public trust. Say no to corporate greed and let's bless the USA with sanity.

Sincerely,
Angela La Manna

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

MY WORDS: I thought the rush to frack was to make the U.S. energy independent. I see now, well actually, it's always been obvious, but now blatantly so, it's about a relatively small group of people and the corporations they represent, making a lot of money, and leaving us with the mess. So...the following note is polite. And that's a good thing. I personally no longer feel polite about these issues. I'm sick and tired of my government taking my money and then working for corporate interests.

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

We only have one opportunity when nature is involved. To many species have been lost forever because no concern was given to the effects of "progress". We know better now and need to think of climate and the environment in the long term and not just potential short term and monetary gains.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Kenneth Large

I live in Colorado where fracking is rampant and the lies that are continually perpetuated on the people of CO about the amazing benefits of fracking border on ludicrous. It's time we did a serious halt and rethink on the supposed 'benefits' to the US on this energy resource, not only for what it's doing to the earth, humans and animals who live around it, but because we don't see any of the benefits! Our gas and oil is still just as outrageous as ever! Only the oil companies, and perhaps the government profit from this sham. It's time the people of the USA had some say in what goes on in their country!

Sincerely,
Lori Taylor

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Patty Kowalczyk

We here in Az. & N.Mex. are experiencing earthquakes & their aftershocks as we speak through the internet! This is a very real concern, not to mention the damage to our water wells & underground sources for H₂O. Please stop this horrible experiment for \$\$\$.

Sincerely,
Dawn Schlum

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I am worried that we are putting the health of our children at stake so that companies can make money selling liquified natural gas to other countries. I am also concerned about what fracking in our country will do to the environment that we leave our children. While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand.

Please pay attention to recent studies showing that EPA underestimated how much methane leaks during gas production.

We need to understand more the effects of exports of LNG on our own and the whole world climate. Fracking seems to be bad for us and future generations.

Sincerely,
Jane Goldthwait

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Lisle Lewis

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I do not support the quick expansion of fracking and consider it both environmentally unsustainable, as well as socially unsustainable. What it is causing to the fabric of many communities is appalling.

So, I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications. Yet, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Your own analysis makes it clear that exports will cause additional fracking. All responsible agencies must consider the short and long term environmental impacts from increased fracking before approving more and more activity.

Updated environmental and socioeconomic analyses are needed as part of the evaluation of LNG export facilities. They should also include the recent studies that show the EPA has underestimated the amount and potency of methane leaked during gas production.

A more complete understanding of how LNG exports will affect our climate is critical. EISs and EAs all need to fully assess the cumulative impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries.

Sincerely,
Heidi Lovett

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I add my voice to plead for responsible leadership so urgently needed in our priorities-skewed world. We need leaders who listen to the wisest voices from both the sciences and from public policies that shape our relationship to the natural habitats and resources we depend on. We need to lead by example in an enlightened approach to energy use -- by drastically decreasing our exploitation of fossil fuels and investing in creative renewable energies: solar, wind and other possible innovations that our best minds envision.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
P Wright

Fracking is making a toxic wasteland of our nation. Alternative energy resources must be explored instead. Think of our children. They're watching and waiting for us to do the right thing for the future of our land. Please help them.

Sincerely,
James Johnston

In my mind, it is both foolish and dangerous to ignore the uptick in earthquakes that is linked in Oklahoma to extensive fracking. Let's concentrate on wind, solar, biofuels and leave our earth alone!

In hope and prayer that you will consider these issues carefully -

Sincerely,
Megan Wholey

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand.

In NC, the legislature actually fast-tracked fracking and made it unlawful for us to even know what chemicals they are using that may pollute our waters. Despite significant protesting and the need for honest safety studies, the greed factor won and we are now in jeopardy of ruining our state beauty and citizen safety. So for the purposes of short term gain in the fuel industry, we will sacrifice the safety of the citizens, the beauty of the state, and all other industry and tourism currently attracted here. What ever happened to clean fuel like solar and wind?

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sharon Meyer

I would just like to say, stop being stupid. Stop all exporting of OUR countries fuel resources. This is OUR country and these corporations are making billions of dollars exporting OUR resources and leaving us with all the problems. Gag orders is not how we do business in this country or at least it used to be. When an industry locks out the citizens of the country they are drilling in, those citizens are being used for profit that harms them. This industry IS DESTROYING LIVES in this country and by you allowing the export YOU are directly signing their death warrants and killing OUR planet (the only one we can live on, remember). It is time to stop the madness. Demand full disclosure of this killing industry machine.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Val Stelse

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production. The huge amount of water that the fracking requires is ignoring the facts of global warming and less water available to everyone. Fracking just is not safe.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Carol Haley

Fracking is dangerous and disruptive to the earth. While decreasing our dependence on foreign oil is a noteworthy cause, we must think of the critical state of our environment. Instead of continuing to exploit this Earth's limited and precious supply of oil, we should make more of an effort to explore alternative sources of energy, for these sources of energy hold the key to survival. Through the use of more sustainable, cleaner sources, we can ensure a future for our children that would otherwise be doomed.

Sincerely,
Eszter Janossy

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Irene Thiel

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Katya Kantor

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Fracking is unsafe. Stop the export of Fracked Natural Gas. It only lines the pockets of the big companies and leaves the American Citizens with polluted environment.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Diann Darnall
