Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Jason Richter

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

I LIVE in a fracking zone. While the activity has just started near my home, friends of mine in neighboring Washington, Greene, and Fayette Counties are sick due to exposure to airborne pollutants - including hexane, a recognized neurotoxin - from natural gas sludge pits, and compressor stations near their homes. Seizure disorders and polyneuropathy are common in these areas, as are cysts in the lungs and around the heart.

To take steps to INCREASE industrial activities in areas near the residences of American citizens, to knowingly allow an industry that is exempt from key portions of the Clean Air Act, the Clean Water Act, the Safe Drinking Water Act, the Right-to-Know and Superfund Act to operate literally only a few hundred feet from homes, schools, hospitals, day care centers, exhibits an attitude that is not only irresponsible and cavalier, but that points to a type of corruption in U.S. government of legendary proportions - a type of corruption hitherto attributable only to the worst of Third World governments.

We can do better than this. We, as a country, are better than this.

I fully recognize the industry pressures upon those serving in government. Even so, I am asking you to step back, remember the values and the mores with which you were raised - with which all of us were raised - and find in yourselves the courage to do the right thing - not the convenient thing, not the easy thing, but the right thing - remembering that the health and the lives of countless American citizens hinges on your decisions on this issue.

Picture in your mind for a moment your own families - your aging parents, your children, your grandchildren, their beloved pets. If you would take steps to ensure that none of them lived near a natural gas extraction zone or natural gas processing or refining facilities, if you would take steps to protect them, if you would take steps to spare them the pain of watching those they love become sick and die, won't you do the same for other Americans as well? We all have names, we all

have faces. We are not simply population or demographic statistics. We are individuals, each with rich stories and accomplishments, triumphs and griefs of our own.

Forget for one moment the back-slapping buddies who engender group think in Washington. In solitude, reflect on this matter, reflect on this decision, and do the right thing.

Thank you.

Sincerely,
Dorothy Bassett

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Dorothy Carlo

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Thank you for proposing to end the practice of conditionally approving liquefied natural gas (LNG) export applications.

However as you know, we really need to understand the impacts of allowing LNG exports.

We really need to protect communities from the dangers of increased fracking to meet foreign demand.

Obviously, exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Humanity is being tested - can we control greenhouse gasses? The US has failed the test so far. We need to start leading.

Sincerely,
David Harrison

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical. It seems the DOE hasn't kept up with the science of the results of fracking in the communities where so much damage has been done to groundwater, soils and air. Why have a DOE if you're not performing the work it takes to protect our communities from the assaults of the gas and oil companies.

They are racking in huge profits and taxpayers are left cleaning up and dealing with the health effects on their bodies.

Sincerely,
Sandy Ahlstrom

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
M Klein

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Lee Kowalski

Subject: Needed: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, but much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from current fracking and increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production. Also please update your analysis to reflect recent studies proving earthquakes have been caused as a result of fracking.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical. Thank you.

Sincerely,
Jolie Blackburn

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Fracking has the potential to contaminate the water table, polluting our environment and destroying our clean water. There are also hazards involved in transporting and treating frack water, transporting LNG, and building export facilities. Early proponents of fracking said this process would make us energy independent. Now we are looking at the potential for damaging our environment to ship our gas overseas, not for energy independence but for corporate profits.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
sandra busking

I am a land owner whose property in Colorado has been affected by this for years - it's too late for my community there, please don't throw away our land for short term dollars, no matter how many. We won't be able to reverse earthquakes, land erosion, water contamination and wildlife disruption - not to mention noise pollution and property devaluation due to fracking.

Sincerely,
Linda Runkle

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

HERE IS A VALID CONCERN.

Wyoming has no CURRENT PROTECTION from the corporations that use FRACKING and have severely damaged the environment and drinking water supplies. (e.g. Pavillion WY.)

Imagine what your town could be like if they handpicked agency members- (like the Department of Environmental Quality, with the director and board members---ALL appointed by the Governor, who will NOT recognize the EPA, or any their damage findings. This state government WON'T release contamination findings to the public, until the companies have an opportunity to "make changes in the report". We also have seen more wildlife losses in a decade, and we have NO RECOURSE WHATSOEVER.-- state testing is limited and only available when and if they state decides it is needed.

WHY SHOULD WE ALLOW NON-REPAIRABLE DAMAGE TO OUR own state, just for the overseas sales to foreign country's??? PLEASE PROTECT OUR HEALTH, and the devaluation of our homes and properties.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, MUCH MORE is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased Fracking JUST to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional Fracking, and the environmental impacts from increased Fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the Fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

CAN YOU HELP US OUT IN WYOMING ??

Sincerely,
Willis Patterson

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Edmond Labore Jr

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Marylee Smyth

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand

.Initially we were told that the fracking would be used within, the U.S. in order to be dependent of foreign supplies. Now we are risking major degradation of our natural resources and for other countries!! The longterm effects are not known and , respectfully I insist that DOE, under your care, Mr.Moniz, guarantee that no lasting harm is done. Notices of increased earthquakes occurring in various states, for example, need to be assessed before hastily to occur. permitting this activity DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

I fear for those who will be here in the future. America the Beautiful will be in the past if international corporations whose goal is profit, have their way. So, respectfully, WAIT-no harm's done- before allowing LNG exports to continue.

Sincerely,
Joyce Kunkle

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Hans Jostlein

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I am grateful that the Department of Energy proposes to end the practice of conditionally approving liquefied natural gas (LNG) export applications. That is certainly a good step in the right direction.

However I really am concerned that moving ahead with exporting large quantities of liquefied natural gas will increase the demand for fracking. There are so many unknowns about the impact of fracking. Frankly, our allowing fracking without being sure of potential impacts scares me, not so much for my personal well-being since I doubt Connecticut will allow it anytime soon, but for family members in other areas of the country.

I know that exports are vital to economic health. However it's a part of a bigger picture. I urge you to view the situation holistically with thought for future generations.

Sincerely,
Lisa Barr

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
cindra broenner

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I find it appalling that this country preaches energy independence as a way to free the U.S. from dependence on Mideast and other foreign sources of oil, and then undermines that goal by exporting Liquefied Natural Gas (LNG). Either this government supports energy independence or it does not. Seems like the DOE is trying to have it both ways! This means more fossil fuel extraction and continued risk to our security caused by dependence on foreign oil and other fossil fuels. Exporting LNG should stop immediately!

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, it amounts to rearranging the deck chairs on the Titanic. In addition, it's an ecological hazard and much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Dept. of Energy's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

I call on you to go far beyond a new analysis of the environmental impacts from LNG Exports. The Dept. of Energy should lead the way in calling for an end to export of any and all fossil fuels and rededicate its efforts to phase out fossil fuels while aggressively supporting development of clean, renewable energy sources in this country. Climate change is here and we are fiddling while Rome burns.

Sincerely,
Toni Francis

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Cynthia Maguire

It has been stated often that shale gas and other dirty energy production, including coal, is necessary for our energy independence. If that is the case, then there is little justification for expanding export capability, unless this is yet another give away to wealthy corporations who simply want to sell gas at higher international prices. We've given enough to fossil energy giants and must not continue to sacrifice our health and quality of life to satisfy their greed.

Sincerely,
Eric Hopkins

Why is the DOE seemingly willing to trade clean drinking water for LNG? Contrary to "industry science", fracking has disturbed local geology, caused earthquakes, and leaked into local water sources. I suggest that fracking "waste", called "salt water" (ha ha), contains deadly chemicals and will eventually pollute all the potable water in the country. Please do this one right!

Sincerely,
Dana Huffman

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Diane Groat

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Vickie Shoemaker
