Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Irene Grubbs

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Rachel Anne And Marg Landau

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Melissa Dyas

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Casey Carroll

I have read countless reports that lead me to conclude that fracking is an ecological disaster. Methane and other environmentally bad chemicals leak from poorly sealed wells.

We should put all our resources behind sustainable futures such as solar panels and wind generators and crops like corn and cattails which recycle carbon and have a net zero footprint.

Sincerely,
David Klassen

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sydney Bryan

I strongly object to LNG export facilities. There are many adverse effects on our country, such as environmental devastation, pollution of groundwater - source of drinking water for many communities, loss of valuable freshwater resources used and polluted by the fracking process, and an increase in the price of natural gas. Do we really want to ruin our natural resources to: provide energy overseas; endanger our drinking water supply and quality; enrich the oil industry at the expense of U.S. citizens' health, quality of life, home value, increased cost of energy? Please consider the American people.

Sincerely,
Natalie Pien

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Debra Rehn

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
David Medina

My town, Loveland, CO, was hijacked by a corrupt majority in city council and sold to oil and gas companies to frack within our city limits. I am outraged!!! We petitioned for a ballot issue, and the oil and gas companies spent \$900,000+ to buy the election out from under us. This is wrong! There should be no fracking within the city limits of any city in the US. We have a right to protect our health, our property values, and our quality of life!!! These rights are not for sale to oil and gas companies to make a fast billion dollars and leave us with the damages.

Sincerely,
Ellen Woodbury

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Don Najita

Endangering our planet with the hazards of fracking is sort sighted and unsustainable. In the future water will be the most valuable natural resource -- Water, not gas, not oil. Risking our water supply by contaminating millions of gallons of water per day with extremely toxic chemicals is a very poor choice. Transporting long tanker trains of LNG via our railways through towns and cities and waterways is a catastrophe waiting to happen. Please look at the long term consequences of this disastrous technology before entering a huge expansion of this most questionable practice. Do not allow export facilities to be built.

There are alternatives to our domestic energy needs: solar, wind, geo-thermal. These should be expanded upon. US industry should be developing the technology to export these sustainable energy products -- not one that endangers our communities and water supplies, with incredibly toxic waste whose long term impacts are unknown, but almost certainly dire.

Sincerely,
Sharla Perel

Fracking is dirty, and that is why I am against it. Fracking requires lots of water that is scarce in many regions of our country and often results in contaminated groundwater in the area surrounding the gas wells. Water was a hot natural resource issue long before oil was recognized as a significant fuel, and in the not too distant future, the scarcity of water will become a survival issue that will make the energy industries seem as small as neighborhood lemonade stands.

I come from a Texas oil family, and I have known since grade school that the production, processing, transport, and burning of oil and gas is DIRTY, and that the politics behind oil is even dirtier. The US needs to phase out the use of fossil fuels as fast as possible by using renewable energy to generate electricity. Part of that electricity should be used to power mass transit systems in every city and intercity passenger and freight trains between all cities. Extracting, processing, transporting, and burning more fossil fuel is the wrong direction our nation should be heading.

Sincerely,
Stephanie Stout

I is an Antiquated TECHNOLOGY, TOO EXPENSIVE in all ways especially to MANKIND as well as Environmentally Destructive to the Planet and to all life forms on the Planet AND IT IS NOT NECESSARY! PLEASE promote a Competition between Universities to Invent the simplest, probably also the cheapest technology to bring "OUR HOT MOMA'S" HEAT to run our "STEAM ENGINES for Generating Electricity and even running steam thru copper tubing in the floors of our large public buildings. This HEAT is underneath our feet all over the planet. And I assure you that our "Climate Change" IS INDEED the first Phase of A Mini-Ice Age. We may even have time to create an Energy Grid world wide that will save millions of persons, like you and your family, me and my family to name a few, from being FLASH FROZEN in the DARK. Remember the mastodons were found with semi tropical plant food, totally identifiable, in their mouths. Also, the meat was just like flash frozen meat in your local supermarket. We truly need to give up fossil fuel.As Human Beings, this most likely means that we WONT, so that the persons who survive will have many generations to Repent until they forget like us. Do Your Research and Wake Up Your and your countrymen's Problem Solving GENIUS ! THANK YOU ! I'm already 85 yrs old, so being flash frozen in the dark won't really bother me. I just think that we can do much better for our children, grandchildren and great grandchildren, as well as for the rest of the "Family of Man".

Sincerely,
Barbara Hibner

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Samantha Schneid

Jul 12, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Fracking is an unsafe process even though the harvest may be hopeful.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis. The U.S. and its citizens will not be the beneficiaries of that harvest. Allowing corporations that already have mega millions make more without contributing more to the many needs of the country is not in the best interest of the country.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical. Please consider all of the implications of the procedure. Thank you for hearing my concerns.

Sincerely,
Phyllis O'Daniels

Dear Ernest Moniz,

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, but much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand! DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

Please also consider the global climate impact of exporting carbon and thereby encouraging its use. And please consider the US jobs that will be lost to abroad because countries that already have cheaper labor costs will (because of our exported carbon) also have equivalent or lower fuel costs. **WE DON'T NEED TO EXPORT CARBON AND JOBS! NO ONE BY THE FOSSIL FUEL INDUSTRY BENEFITS FROM EXPORTING FOSSIL FUELS - BY YOUR OWN ANALYSIS!**

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
James Conklin

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Walter Pozywio

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Shawn Vanatta

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Marcia Bollo
