Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Kaye Gucciardo

Jul 13, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

The Department of Energy should not allow the contamination of precious and irreplaceable water supplies of U. S. communities for any reason. Certainly not to meet foreign demand for natural gas.

There is evidence in the film "Gasland" that hydraulic fracturing (fracking) forces methane into ground water sources. There is nothing to prevent the toxic hydraulic liquid from also reaching ground water sources. Air and surface water is also contaminated in the area of the drill site.

LNG exports must not be supplied by hydraulic fracturing--otherwise the effects on our environment will be devastating.

Sincerely,  
M. McIntosh

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Harold Dezotell

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Elizabeth & Ronald Butler

I have heard that there are plans for fracking near Chaco Canyon here in northern New Mexico. This could be a real threat to a very historic part of our nation. I hope you have studied wind, solar and natural gas power as much as humanly possible. Thank you.

Sincerely,  
Allen Lovekin

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Francille Willis

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Vicki Arnett

Jul 13, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications. Much more is needed to understand the impacts of allowing LNG exports in our country. Much more is needed to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production. Our children do not need to be breathing benzene, a known carcinogen and leading cause of childhood leukemia, for instance. Benzene is leaked in the process, also.

A full understanding of the impacts of LNG exports is needed -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries. An in-depth understanding of how LNG exports will impact our climate is critical as well.

Our government is supposed to be for the people, by the people... supporting we the people, not the corporate entities making profit off of our good earth. Protecting our communities from these LNG facilities is of utmost importance. Your department has the capacity and duty to do so.

Thank you for considering my views.

Sincerely,  
Janet Weidman

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Pam Chestnut

Every day I listen to a plethora of oil company paid advertisements telling all of us in Colorado how lucky we are to have big oil companies fracking everywhere in the state. Our ground water has become toxic and ignitable. People who live close by are getting sick and we are now having earthquakes in Colorado. I've lived here for 69 years and can tell you for a fact Colorado is not a state that experiences earthquakes...until we were BLESSED by the oil companies coming in and fracking. Remember the butter commercial that said "It's not nice to mess with Mother Nature"? Well the knotheds that run this country, you amongst them, just can't see the forest for the money. Let's hope you don't have children or grandchildren dear Secretary Moniz, one of these day in the near future, they will hate you for all the damage you did to the earth and all the money you left them for your part in this won't mean a thing. Money won't buy potable water and fix global warming. You Ernest will have to step up and take the bows for creating that nightmare. you and all your compadres in Washington..you know the other crooks.

Sincerely,  
Kathy Falbo

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

The number one source for fresh water in the United States is groundwater. Contamination of our groundwater resources has irreparable consequences. Safety protocols should at the very least protect our water supplies. There is a need for MANDATORY protocols for accident prevention and remediation - that must include assurances that affected communities will be provided with clean, safe fresh water. Mandatory inspections and the ability to force companies to make needed upgrades/repairs, and replacement of old materials are needed. Additionally, the inspections should be by parties not associated with the oil/gas companies that are fracking.

Sincerely,  
Felicity Francis

Jul 13, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Additional action must be taking against fracking companies to protect the environments and communities that are affected by them. Many people find that their water is so filled with gas that it's even flammable and if they speak up then they have gag orders brought against them. There are many other alternative energy sources so very little importance should be placed on fracking due to the severe environmental damage and the fact it can ruin people's lives.

Sincerely,  
Shawn Nagle

Gas/coal/oil are on the way out. Sure it will take years but now is the time to stop fracking for EXPORT. The United States does not need it so why pollute our atmosphere, water, ground with chemicals that only will need to be cleaned up later. Our next generation does not need this problem to deal with. Plus this will not induce importers of the fracked materials to clean up their acts. NO TO FRACKING. Just drive through Pennsylvania and upper state New York and see the signs indicating opposition to fracking.

In Massachusetts Kinder Morgan wants to put a pipe line through the state to the coast for export. People who do not sign agreements with Kinder Morgan are in danger of losing their rights to say no if the federal government takes their land by eminent domain. This is unAmerican and unjust.

Sincerely,  
Luean Anthony

Jul 13, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I endorse the Department of Energy's proposal to end the practice of "conditionally approving liquefied natural gas (LNG) export applications," much, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis. I have family north of Pittsburgh, and every visit I see the impact of the fracking boom on western Pennsylvania and it is not a pretty picture. Additionally, when -- as we've seen recently on the news -- the immediate damage done to the earth is taken into consideration (contaminated ground water in Ohio and western Pennsylvania; earthquake activity in the western states), the negatives far outweigh the positives to even allow increased fracking activity to meet this so-called demand.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical. Our efforts should be to put to use in expanding clean energy, not padding the wallets of dirty polluters like the fracking industry.

Sincerely,  
Jesse Reyes

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Anne Volz

America is based on Freedom of religion. That means many decent and loyal Americans DO NOT BELIEVE in an Apocalypse! We believe that God and Earth and humanity will be around for a long time. IT IS NOT OKAY for religious-political conservatives to throw our world and our country away for their religious predictions OR their overwhelming greed.

Clean, sustainable, sensible energy only. There are no exceptions!

In addition, I have just read a summary of a report on the increase in the number of earthquakes in Oklahoma that have been attributed to fracking. Because of that increase the state has put restrictions on fracking as a practice, but not enough. If that is happening at all, if fracking has been found to cause earthquakes period, fracking should be suspended everywhere until further studies are carried out. The enormity of the possible dangers to all of us is mind boggling. And for what?

Sincerely,  
Mary Hoglund

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Just why would our own Department of Energy propose to EXPORT when we could use this natural gas right here in the US???

Sincerely,  
Darlene Heere

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Shirley Trietsch

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Victoria Nautel

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I'm appalled by the Department of Energy's proposal to approve liquefied natural gas (LNG) export applications, much more is needed to understand the dangers of fracking to meet domestic US energy needs.

The US has absolutely no business exporting a single drop of energy ever. We will never have enough to meet our own needs let alone those of other parts of the globe.

Please do everything in your power to stop the export of energy from the US as well as to stop fracking anywhere it poses an environmental hazard.

Thank You.

Sincerely,  
Steve Doerr

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Ronald Boisvert

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Jeannette Mistretta

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

The methane leaks alone, have shown how damaging tracking is for our environment. Look into it, will you? Please.

Fracking spills + spilling kills.

Sincerely,  
Robin Herzig

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Mike Kelly
