Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Phil Dunihue

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Victoria Coleman

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Gary Bloom

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Satya Vayu

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Kris Dobbmeyer

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Barbara Reddington

Furthermore, DOE. This 'kind' of Energy is a Waste of Time, and 'Wrong Energy'. This 'simply' about a Group of Evil, Greedy 'Oil Barons', getting more and more 'rich'. We 'Need' to be Going to SOLAR, as is GERMANY, a 'country', that, 'WE, THE PEOPLE', Paid For, Rebuilding. My 'father', Spent 11 Months in STALAG-IV-B, way up Near Budapest, Hungary, and later, when he 'Re-Enlisted', into the Air Force, for 20 years, on top of his time in the Army Air Core, he had to Deliver a Giant Turbine Engine, 'manufactured' by American Workers, to Germany, to one of Fritz Thyssen's Steal Factories, he had 'bombed' in the B-24 Bomber, he was on, the Tallahassee Lasee. And, Now, Germany, is using Primarily, SOLAR, while 'we', are continuously, Sold on this 'Pretentious' Need of Fossil Fuels. And, 'we' are Sick of the DECEPTION.

Sincerely,
Sterling McVay

There is no safe fracking, it needs to be banned. Remember the 40 men who died in NY when an LNG storage tank that was nearly empty exploded. A full tank explosion would be a disaster and a target for terrorists. There is no safe place along our populated coasts for such storage.

Sincerely,
Robert Rice

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Genine Davis

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Hooray for the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications! However, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of ANY fracking, especially when it is not for our own country, but to meet foreign demand.

DOE's own analysis makes it clear that exports will cause additional fracking, and the dangerous environmental impacts from increased fracking must be considered as part of your analysis.

Please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production. Gas is coming out of the water taps in some areas!

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Dorothy Richmond

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Sandra Saltzer

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Brian Erickson

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Nancy Soke

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Dear Mr. Moniz:

I live in Albuquerque, NM. I am a nurse and a veteran. I have grown up in NM where we now face droughts & forest fires. The Ogallala Aquifer runs between eight states known as the breadbasket of the United States, New Mexico is one of those states.

The new route proposed by Trans Canada still goes thru the Aquifer at some points along the way.

Do you remember the BP oil spill in the Gulf Coast? We were helpless for days as oil spewed into the ocean. BP had "booms," essentially paper towels moping up one of the biggest oil spills as it was gushing into the ocean. Can you think of a way to mitigate an oil spill into the Ogallala? How can it be approved without them proving to you exactly what they would do in the scenario of a leak or a natural disaster that causes a leak in the XL pipeline.

The oil is being shipped out of the United States so it won't help us at all but it can destroy our water source which will send our economy into a tailspin again. How many times do we have to pay for people's arrogance and audacity to put our water supply at risk?

If you have any children, please think of the world you are leaving them behind. If you don't think of your constituents, I hope you love America more than the greed of the oil baron. It will only create very few jobs (35, it is said) so I cannot see an upside to the people of America.

When our water is compromised, all the money in the world won't get you a drink of fresh water. How many days do you think you can live without fresh water?

We are killing our wild life and our oceans are polluted enough. We are on a destructive pathway for what? Who is getting the money, the rich who only give others a pittance to be on their side. They won't have drinking water either. Mother Nature does not care about how rich you are.

There comes a time in everyone's life when they must do the right thing or our way of life will be destroyed. Please if you have a conscious or you care at all about America, please stand up and say no to freaking fracking! Do not let our breadbasket go down on your watch.

Thank You!
Marie Fuentes

Sincerely,
Marie Fuentes

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Pamela Livermore

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

Fracking is a very dangerous extraction procedure that produces such side effects as flammable water due to the number of chemicals that leak into the water table as well as increased number of earthquakes. We must carefully consider the environmental cost before approving export applications as they are very legitimate concern.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

Jul 13, 2014

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Jordan Cove proposed export terminal and Pacific Connector gas pipeline in Southern Oregon needs to be withdrawn from the conditionally approved list.

I am an affected landowner of PCGP - a Williams Company proposal. As you know, William's Company has an atrocious safety record with two recent explosions in Opal, WY and Plymouth, WA.

As a former permit processor for San Diego CNTY Air Pollution Control District I have witnessed many negligent practices in industry. I have also helped shutter some.

Now we have a scenario of a 36 inch extremely high pressure natural gas pipe planned to go under the Rogue River at 800 feet from a gasoline service site and a half mile radius from populations in the town of Trail, Oregon and 1.1 mile from the City of Shady Cove, Oregon. Never mind the pipe buried a mere 18 inches in forested rural area and rugged, steep terrain next to my new passive solar home. We had over 10,000 lightening strikes in my area last summer and five mega wildfires. The closest burned 12 miles away.

Williams Company was also responsible for the Appomaddox, VA fiasco a few years back. They had just completed a PIG monitoring safety check on the line that exploded next to four homes - burning two severely. This was also near a gasoline service site where their pipe rocketed through forest and left a huge crater next to these homes.

Please do not allow the over 200 families and family businesse along this proposed Pacific Connector Pipeline route fall victim to this project that will export gas from Canada. Many of these businesses are long lived - some over 60 years - don't through the heart of Oregon away!!

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental

Protection Agency has underestimated the amount and potency of methane gas leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of the impacts of LNG exports will have on our climate is critical.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Julie Phelan

Please follow the link contained in following article for a .pdf file containing 347 cited reasons for disallowing fracking anywhere, under any circumstances. This is a crucial issue and since the two towns in New York have successfully banned fracking, take it for granted that it will happen elsewhere, many times over, because the precedent has been set.

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Are there studies that show that fracking is safe? If something goes wrong does the company have to clean it up? They should!! What happens when they are done in an area and it caves in or makes the water bad? Have they had to set aside a fund of money for ten years to be sure they can pay for it?

Water is the new gold be sure you protest it!!!

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,
Eudell Bossard
