Ernest Moniz

Subject: Environmental Review of LNG Export Applications

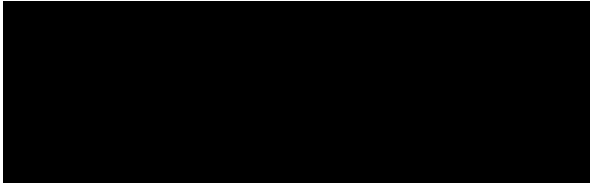

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Sonja Meijer

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Jean LaRocca

Fracking should not be allowed anywhere. Why not implement clean, renewable sources of energy instead of caving into the demands of greedy Big Business whose only concern is making more and more money with no concern about the negative impact on our environment.

Sincerely,  
Nancy Fox

Subject: Environmental Review of LNG Export Applications

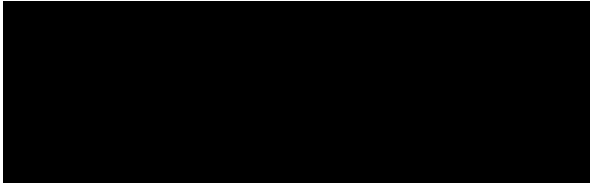

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Karen Norton

Anthropogenic global warming!!! We need to round up methane leaking from: Arctic ocean along coast of Alaska, along all our coasts especially near mouths of rivers, sanitary landfills, livestock manure, municipal waste water treatment plants. And we need to store all of that securely until we can make good use of it--preferably by displacing both natural gas from fracked wells and COAL.

Sincerely,  
Grace Adams

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

American citizens have been asked for years to get behind "energy independence", and we have been asked to compromise our environment to achieve this lofty goal. Now we watch as the profiteers quietly make and execute their plans to sell off our resources, not only causing local environmental problems in the process, but greatly exacerbating global climate change.

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Carol Perrault

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

Please!!! Bring us into the 21st century!!!!

Renewable and sustainable energy options are what we want and need.  
Forget this expensive, dirty, irresponsible, greedy industry!!!

Secretary Moniz, have you toured the country to check on the aftermath  
of this fracking industry? How large IS the collateral damage  
allowance?

I offer you one particular map at Earth Justice's webpage:  
<http://earthjustice.org/features/campaigns/fracking-across-the-united-states>  
Have you really looked at all the accidents, the potentials of all this  
increased methane and other harmful chemicals not only to our planet,  
but to US CITIZENS and their families and livestock who have been  
affected by the toxic chemicals emitted from these operations? Let  
alone the warnings from so many scientists about the potentials for  
water and ground pollution?

All to send record profits to the oil and gas companies (who never  
admit wrongdoing or irresponsibility and enforce gag orders on the  
folks they do settle with).

Honestly Sir. You have the power AND the responsibility to push this  
country towards a more wholesome, equitable, and sustainable future and  
present.

Certainly your brilliance understands this.  
Thank you very much for your attention (just incase someone does  
actually read this:)

Sincerely,

Caprice Huffman

Sincerely,  
Caprice Huffman

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
John Felton

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

The Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications is a good step, but much more is needed such as understanding the impacts of allowing LNG exports and protecting communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking. A thorough analysis is needed of the environmental impacts from increased fracking.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production.

A more complete understanding of how LNG exports will effect our climate is critical and must include all facets of production from the fracking process in the U.S. to the potential for the displacement of clean energy in countries that choose to take advantage of the availability of exports.

Sincerely,  
Sharon Schmit

Ernest Moniz

Subject: LNG Export Applications

Dear Ernest Moniz,

I am pleased to hear that the Department of Energy (DOE) has a proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications; however, I believe that more study is needed to understand the impacts of permitting LNG exports. The communities in which fracking occurs to meet foreign demand for LNG are subject to an increase in the dangers inherent in the process. I urge the DOE to evaluate LNG export facilities and update the analysis to reflect recent studies that show the Environmental Protection Agency (EPA) has underestimated the amount and potency of methane leaked during gas production. A more complete understanding of LNG exports is critical for many reasons - none more important now and for the long-term is climate change.

Sincerely,  
Pamela Ferris-Olson

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Alice Johnson

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production, and the degree to which methane contributes to greenhouse gases affecting climate change.

No analysis of the impacts of LNG would be complete without examining the consequences of hydrofracking relating to the contamination and removal of so much of our country's fresh water, particularly in view of the droughts that we can expect from a warming planet. Abundant fresh water is not a resource to be taken for granted. There are alternatives to producing energy and stimulating an economy, but there is no alternative to fresh water.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
M Carroll

If fracking is going to continue here in the USA, then it should at LEAST STAY in the USA. No more allowing "Big Oil & Gas" to make huge profits on the health and well being of Americans, by sending what they get out of the ground across the oceans to the highest bidders. It should at least stay in this country for Americans to use. You MUST do what is right!!

Sincerely,  
Georgia Davison

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Catherine Rodriguez

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis. I am opposed to fracking because it creates health and environmental disasters for the local communities where it takes place. The short term goal of making profit blinds the gas and oil industry from seeing the dreadful long term consequences of fracking. This gas and oil are not cheap nor clean.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Rose Mary Sullivan

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Hillary Butler

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
James Berkey

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the serious environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency of methane leaked during gas production. Methane is an extremely potent greenhouse gas, and increased methane emissions will further exacerbate the impacts of climate change.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Yulia Gurevich

DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.

With a full understanding of the impacts of LNG exports -- from the fracking process in the U.S. to the potential displacement of clean energy in importing countries -- a more complete understanding of how LNG exports will have on our climate is critical.

Sincerely,  
Chris Washington

Ernest Moniz

Subject: Environmental Review of LNG Export Applications

Dear Ernest Moniz,

While I applaud the Department of Energy's proposal to end the practice of conditionally approving liquefied natural gas (LNG) export applications, much more is needed to understand the impacts of allowing LNG exports and to protect communities from the dangers of increased fracking to meet foreign demand. DOE's own analysis makes it clear that exports will cause additional fracking, and the environmental impacts from increased fracking must be considered as part of your analysis.

When it comes to evaluating LNG export facilities, please update your analysis to reflect recent studies showing that the Environmental Protection Agency has underestimated the amount and potency methane leaked during gas production.
