

CSLF Strategic Planning – Discussion

Mark Ackiewicz and Eddy Chui

CSLF Technical Group Delegate Virtual Meeting

Hosted by the Kingdom of Saudi Arabia

September 30, 2020

Objective for today: input from all CSLF members so we can plan and strategize where CSLF TG can be most impactful in our work

To facilitate discussion:

- How can CSLF TG contribute to broader CCUS discussions?
- What can the CSLF TG do to facilitate advancement of CCUS by industry and governments?
- To those ends, what new Technical Group activities would be useful? What and where are the opportunities?

How can CSLF TG contribute to broader CCUS discussions?

Currently:

- Input into CSLF PG/CEM – Messages to Ministers, Meeting participation
- Collaboration with IEAGHG – study proposals, etc.
- Collaboration with CO2GeoNet – workshops, etc.
- Technology Roadmap and monitoring progress

Opportunities (i.e., What activities would be useful?)

- Communications/Outreach?

What can the CSLF TG do to facilitate advancement of CCUS by industry and governments?

Currently

- Task Forces
- Workshops
- Establish networks (e.g., International Capture Test Center Network)
- TG Meetings – content-rich agendas

Opportunities (i.e., What activities would be useful?)

- Take action on task force report recommendations and findings (e.g., Offshore Storage Workshop Series in collaboration with IEAGHG, H₂ Workshop with IEA H₂ TCP)
- Communications: present Task Force report results/findings more broadly – webinar, linkage with CEM-CCUS etc.
- More group discussion (but focused on **meaningful outcomes... and need all participants**)
 - What will it take to get CCUS started/commercialized/relevant in YOUR country?Besides \$, £, €, ₩, ¥.....
 - What R&D or other technical activities would be of interest to YOU/YOUR country?
 - How can we facilitate: 1) collaborative R&D, 2) meaningful country-to-country and/or multiple country engagement?
