

To accelerate Canada's CCUS potential, Natural Resources Canada has a 3-pronged approach

1. Harvesting and sharing learnings from large-scale CCUS projects
2. Developing lower-cost next-generation carbon capture technologies
3. Accelerating carbon use and conversion

Objectives...

- *Improving the economics via:*
 - *cost reductions*
 - *enhanced performance*
 - *new revenue opportunities*
- *Promoting commercial and research opportunities for Canadian CCUS stakeholders*

In support of these priorities, NRCan engages with domestic and international partners.
