

# Incentive Registry

Develop a global registry of commercial, fiscal, and market-making incentives for use to promote the deployment of CCS technology and projects. The registry will cover incentives including use of CO<sub>2</sub> for EOR, tax and financing incentives, regulatory incentives, and market-making policy drivers. The registry will serve as a vital resource for both developed and developing countries wishing to contribute, exchange, and retrieve information on the status of CCS incentives. It is hoped that the registry will serve as a tool to support and maintain equity between and among CSLF participants throughout the deployment life-cycle.
