

*"Knowing the sensitivity of the monitoring equipment."*

# CO<sub>2</sub>FieldLab

CSLF Technical Group, 12th June 2012

# Background

- Regulatory framework
- Leakage must be well addressed
  - Safety
  - Mitigation and early remediation
  - Public acceptance
  - Accounting
- Validated monitoring system for leakage
- Technology assessment

**Crucially  
needed!!!**

# CO2FieldLab near Oslo

Schlumberger

CLIMIT

# Objectives

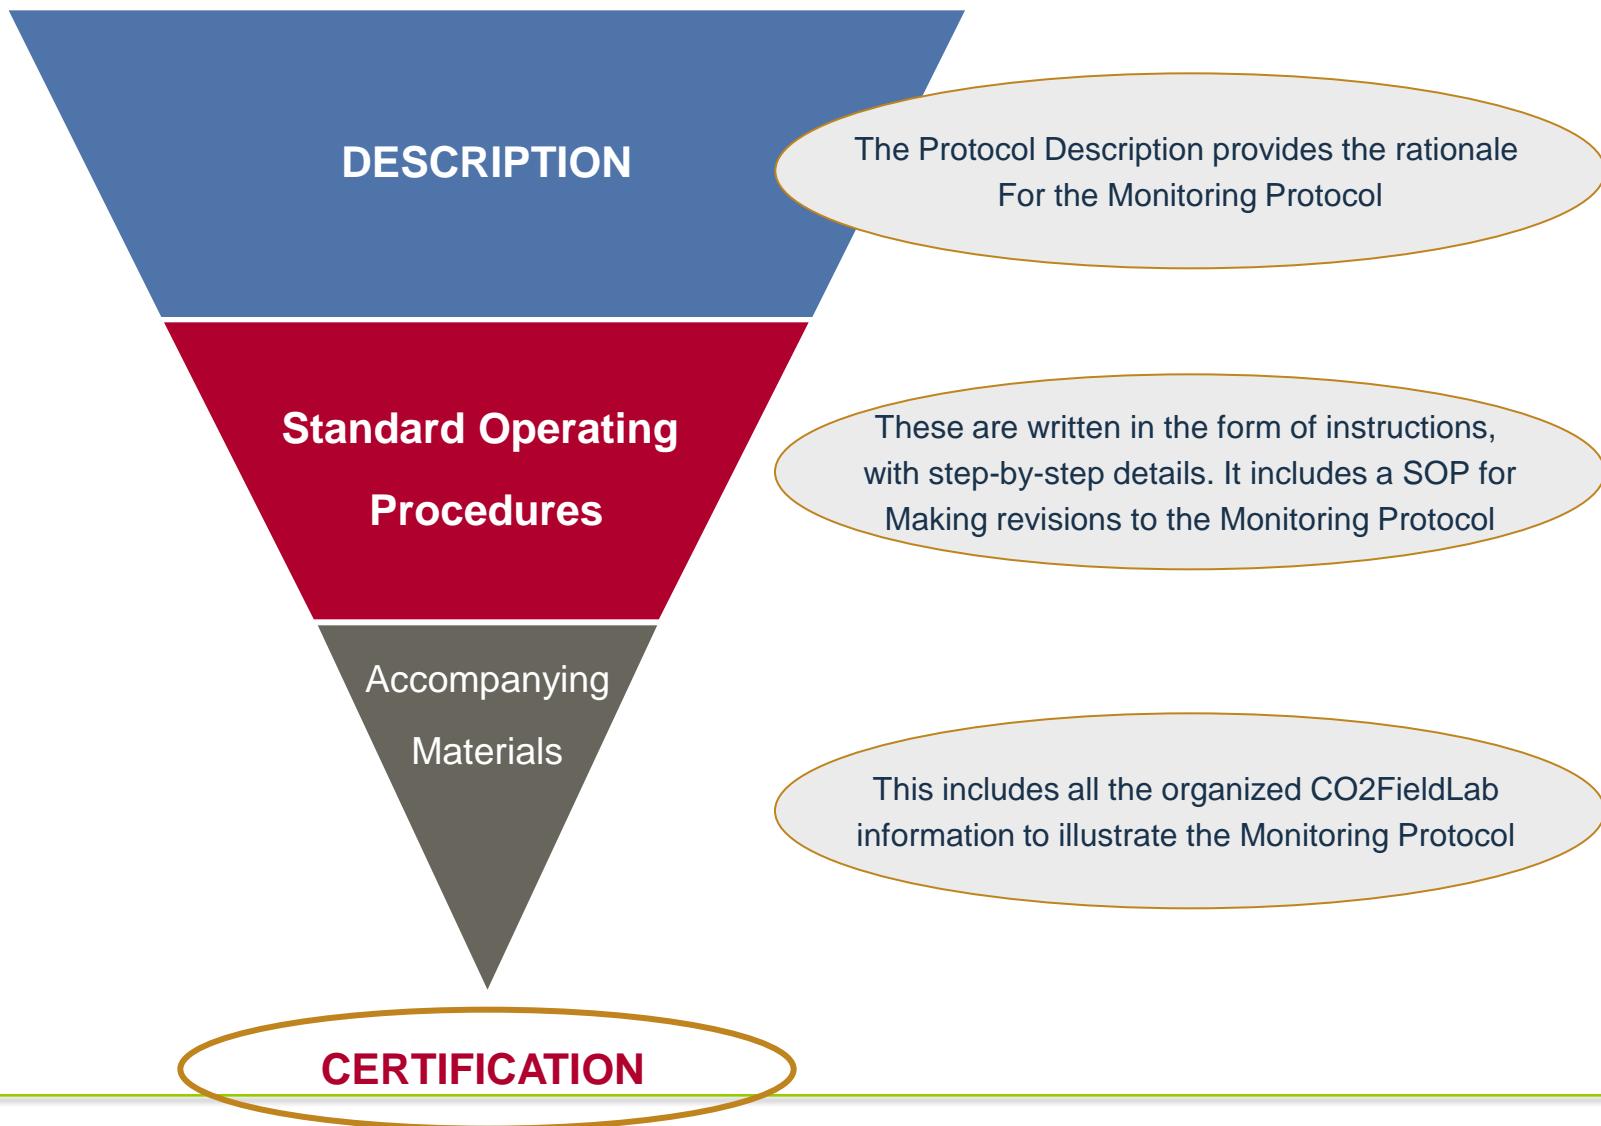

- Sensitivity of monitoring systems
- Monitoring systems and requirements
- Migration models
- Inform the public
- Input to monitoring protocol & certification scheme

# Monitoring of CO<sub>2</sub>

Geophysical surface measurements	Monitoring well measurements	Soil / surface / atmospheric m.
<ul style="list-style-type: none"> <li>• 4D ERT, SPT</li> <li>• EM, NMR</li> <li>• Passive seismics</li> <li>• Active seismics</li> <li>• Time-lapse ERT</li> </ul>	<ul style="list-style-type: none"> <li>• CO<sub>2</sub>, isotopes, induction logging, pressure, temp.</li> <li>• Permanent electrode array, logging</li> <li>• Water sampling</li> <li>• Analysis of bacteria activity</li> </ul>	<ul style="list-style-type: none"> <li>• Soil gas</li> <li>• Surface gas: Laser gas analyser, accumulation chambers, atmospheric tower</li> <li>• Shallow wells: water sampling</li> <li>• Analysis of bacteria activity</li> </ul>
<b>Modeling:</b> History matching		

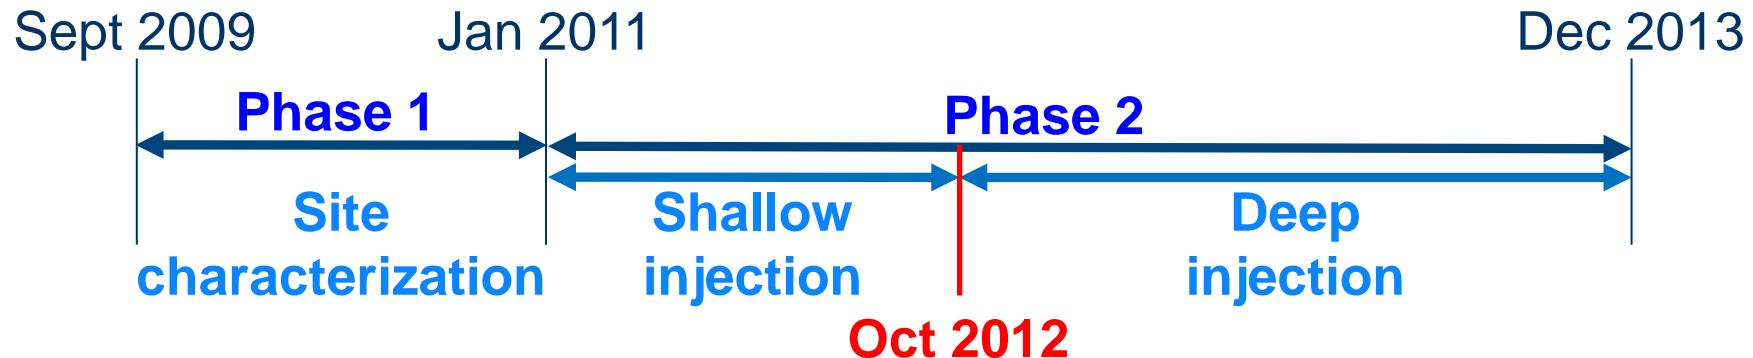

# Protocol & Certification

# Status

- Project approved by
  - EUROGIA+ board (June 2009)
  - French Ministry (July 2009)
  - Gassnova (CLIMIT Program) (September 2009)
  - CSLF recognition (October 2010)
- Phase 1 concluded (Sep. '09 – Jan.'11)
  - Site characterisation: Geological surveys successfully performed
  - June '10: Drilling and logging 300 m deep exploration well
  - Update models based on logged data
- Phase 2a (start May '11)
  - 2011: Shallow injection performed
  - VSP survey at 200 m & continuous sampling performed
  - Deep permeability test (planned Sept. 2012)

# Phases - overview

# Seismic survey at -20°C

## November 2009

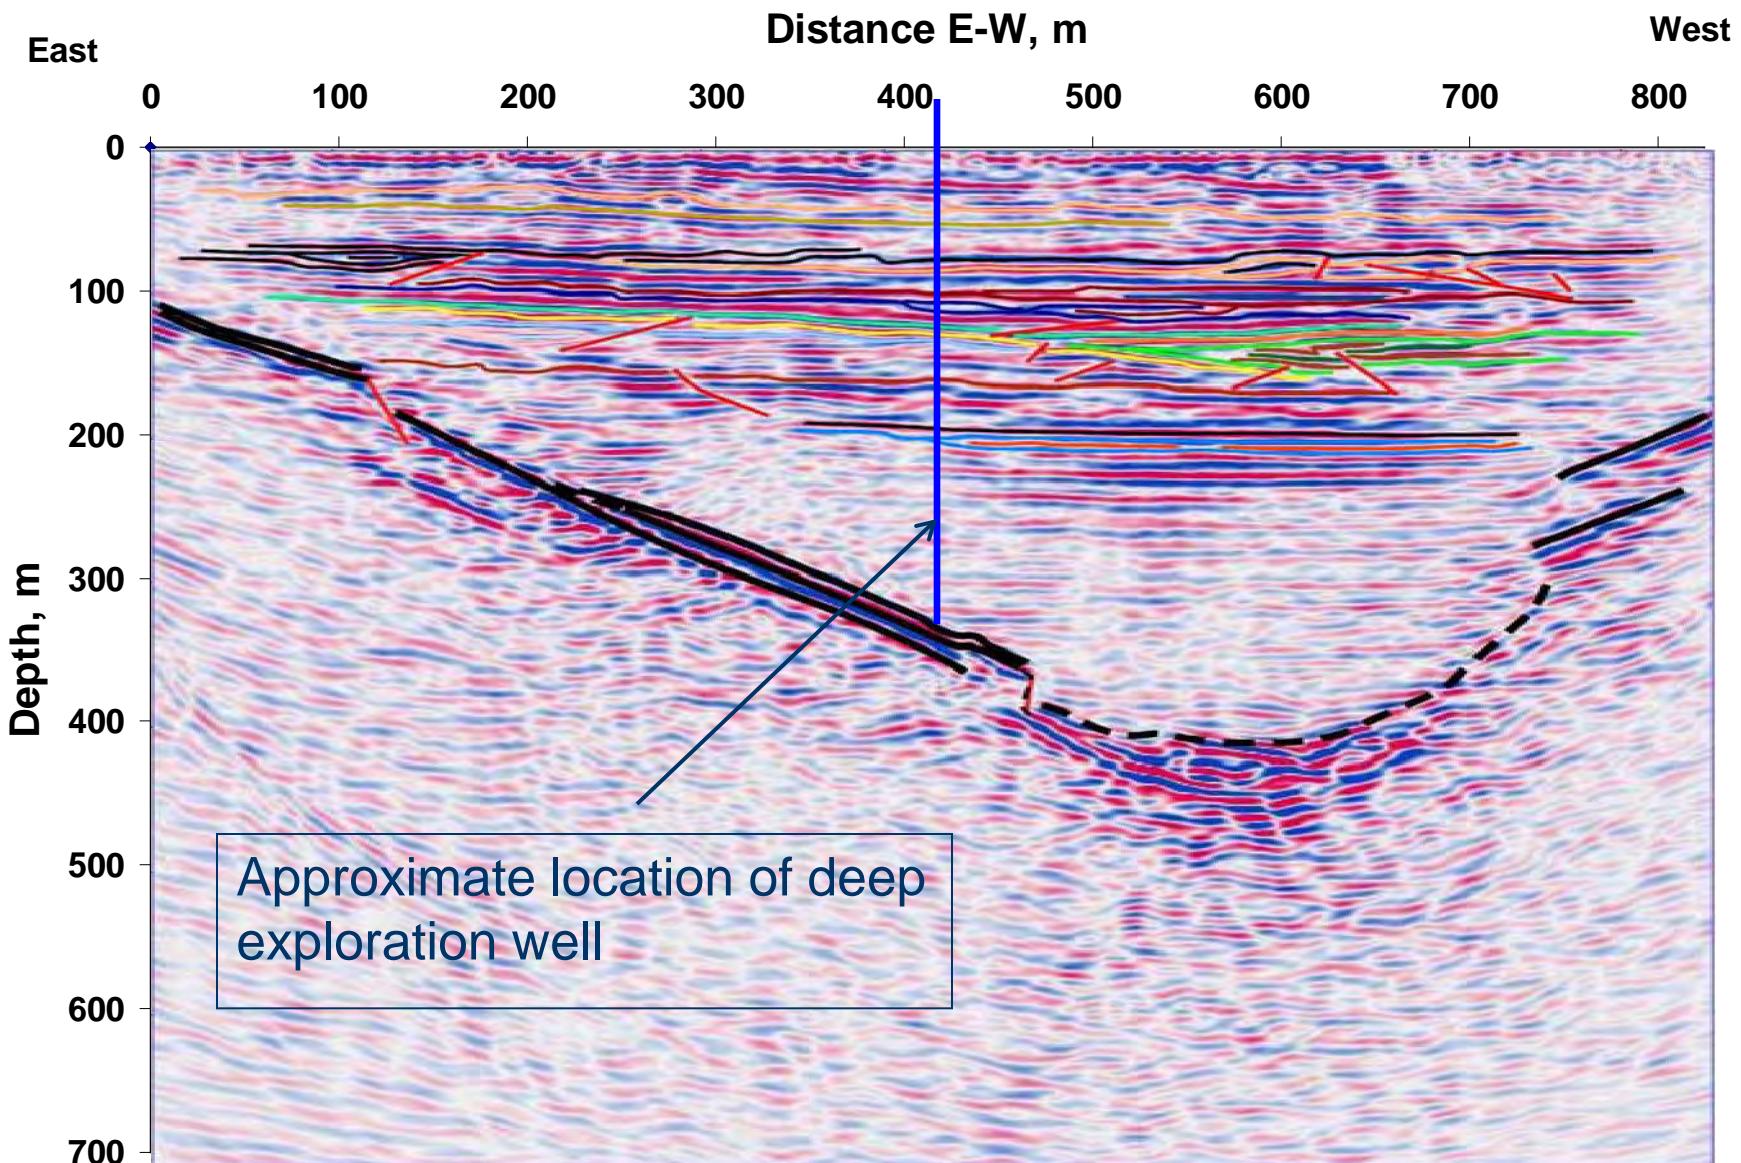

# Drilling – June 2010

# Seismic E-W profile of the Svelvik sand

CO<sub>2</sub> Field Lab

# Injection of 1.7 tonne CO<sub>2</sub> at 20 m depth

September 7. -13. 2011

# Injection well

# Downhole instrumentation (0- 20 m)

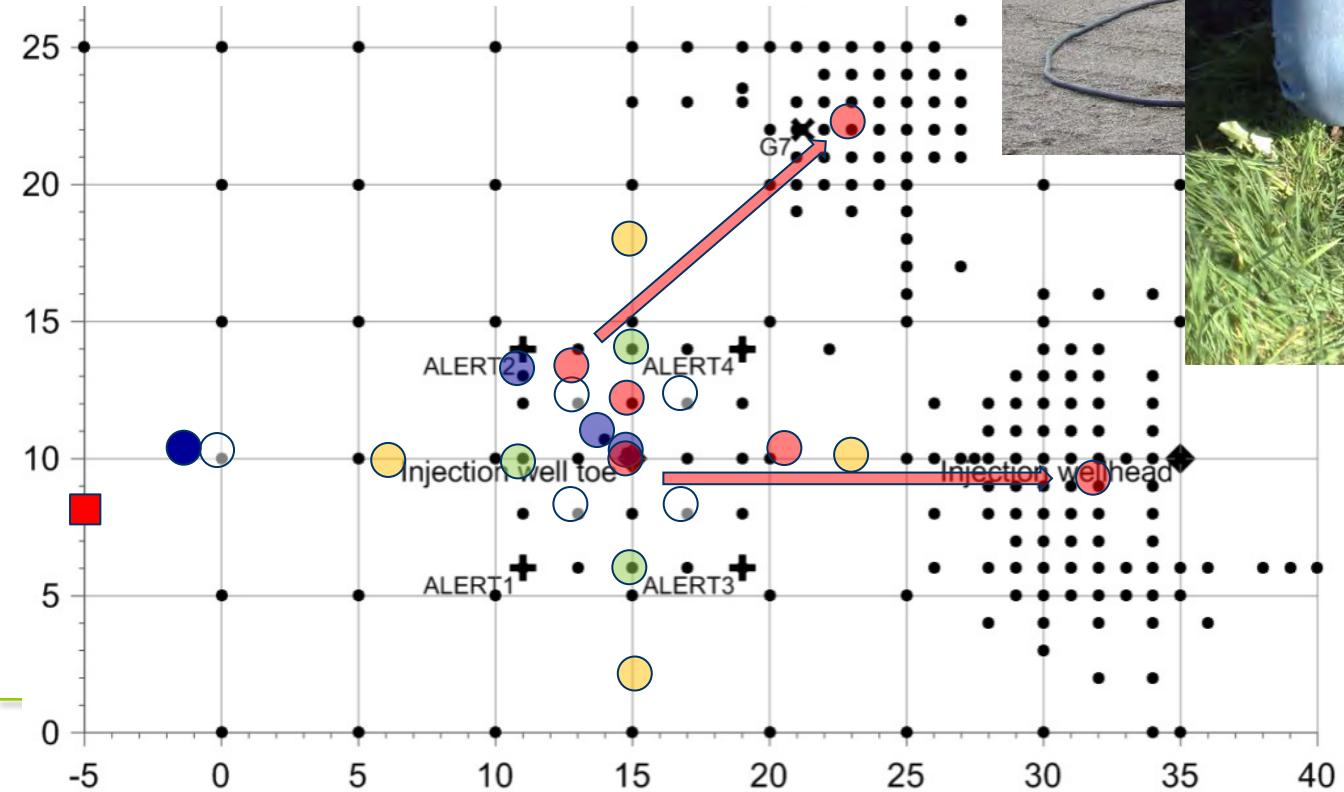

- ALERT (BGS) – Continuous
  - Raman Spectrometer (Continuous)\*
  - Water/gas extractor (Intermittent)\*
  - GPR (BRGM) - Intermittent
  - Schlumberger WestBay multipacker completion
  - Downhole geophysical observatory (Imageau)
  - PVC casing for repeat logging during injection (induction & sonic logging)
- 
- Continuous pressure monitoring
  - Continuous pore space saturation during and after injection

# Instrumentation at (near) surface

Tool	Depth	Deployment	Mode
<b>GAS</b>			
Gas monitor station	c. 1 m	Fixed	Continuous
Flux station	Surface	Fixed	Continuous
Eddy covariance	Surface	Fixed	Continuous
Fixed probes	c. 1 m	Fixed	Intermittent
Mobile laser	Surface	Mobile	Intermittent
Soil gas	0-1 m	Point (not fixed)	Intermittent
Flux	Surface	Point (not fixed)	Intermittent
*Licor or FTIR	1m	Fixed	Continuous
Radon/ CO <sub>2</sub> monitoring probes	0.8m	Fixed	Continuous
CO <sub>2</sub> , O <sub>2</sub> and CH <sub>4</sub> monitoring	1m	Fixed/ mobile	Intermittent
Portable GC	Surface	Fixed	Intermittent
*Aerodyne isotopic analyser	1m	Fixed	Continuous
<b>WATER</b>			
*Perisaltic pumps	Surface	Fixed	Intermittent
*Idronaut probe	Surface	Fixed	Intermittent
*Precision balance	Surface	Fixed	intermittent

\* Tubing  
connected to  
ALERT  
boreholes

# Positioning of monitoring equipment

N

# Some surface measurement equipment

# Crosswell GPR time-lapse monitoring

# Injection control manifold

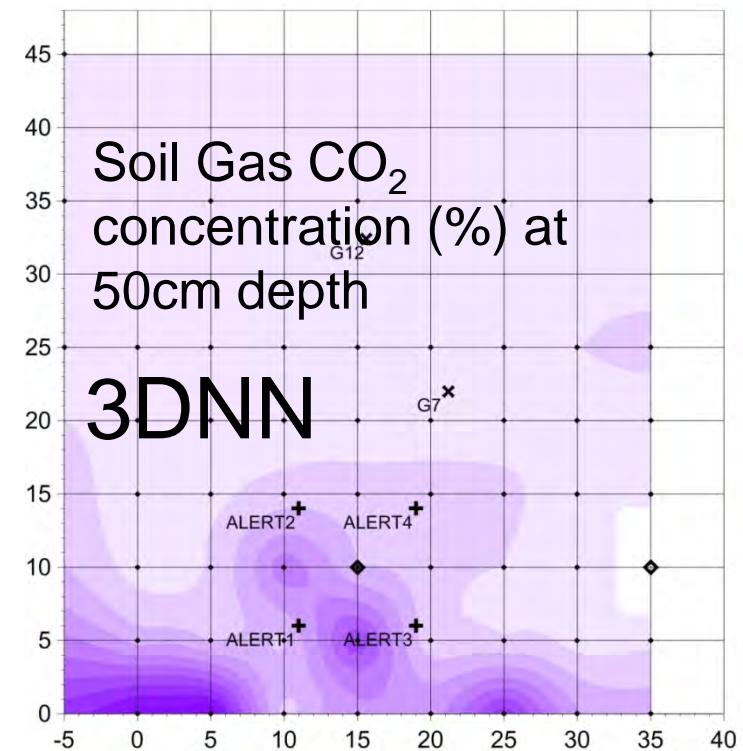

# KARBONDIOKSID

# 7/9/11 (Survey 3)

Baseline survey

Injection start (10am)      Injection stop (2pm)

Soil Gas CO<sub>2</sub>  
concentration (%) at  
50cm depth

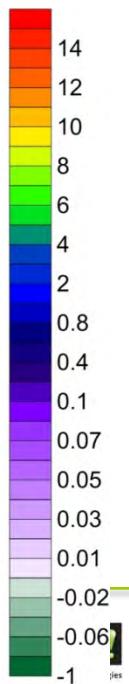

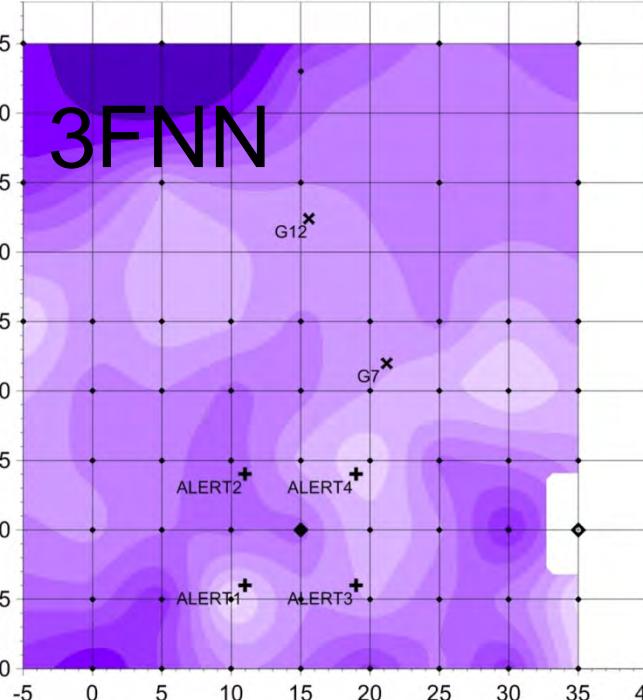

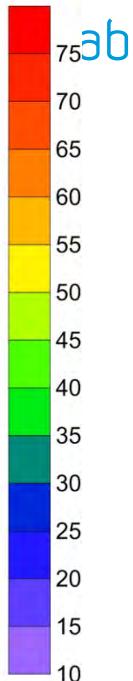

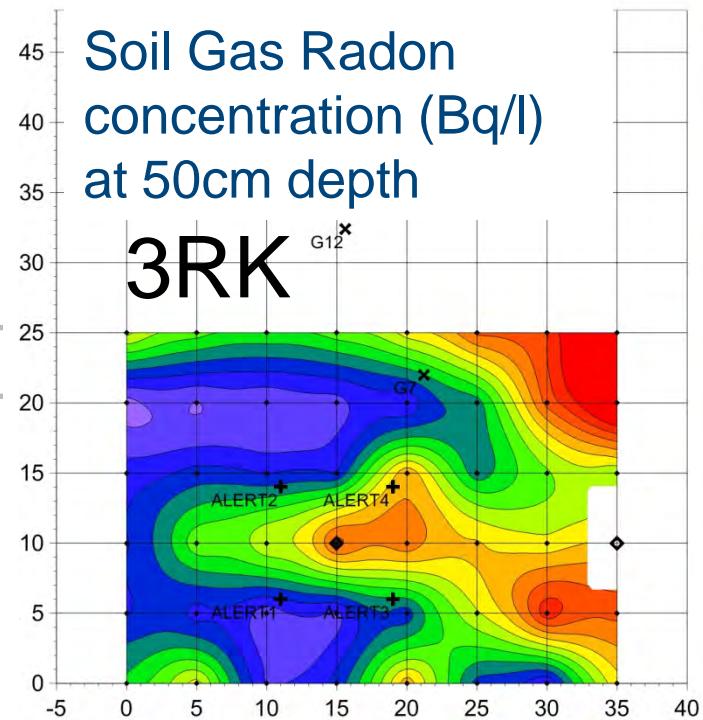

3DNN

Soil Gas CO<sub>2</sub> flux (mol/mq/day) at surface

**CLIMIT**

Soil Gas Radon  
concentration (Bq/l)  
at 50cm depth

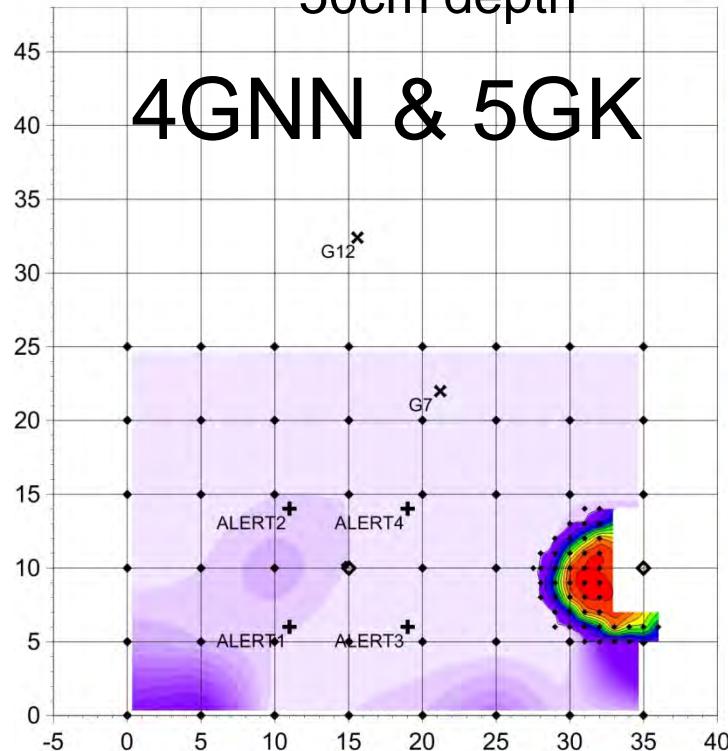

3RK

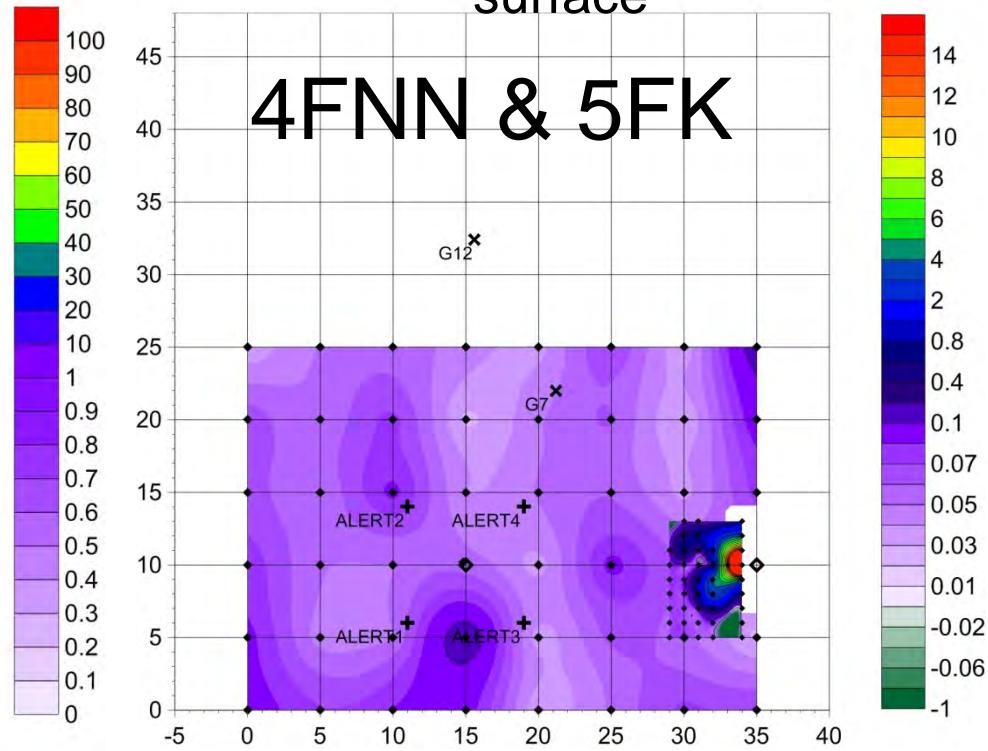

## 8/9/11 (Surveys 4 & 5)

Soil Gas CO<sub>2</sub> concentration (%) at 50cm depth

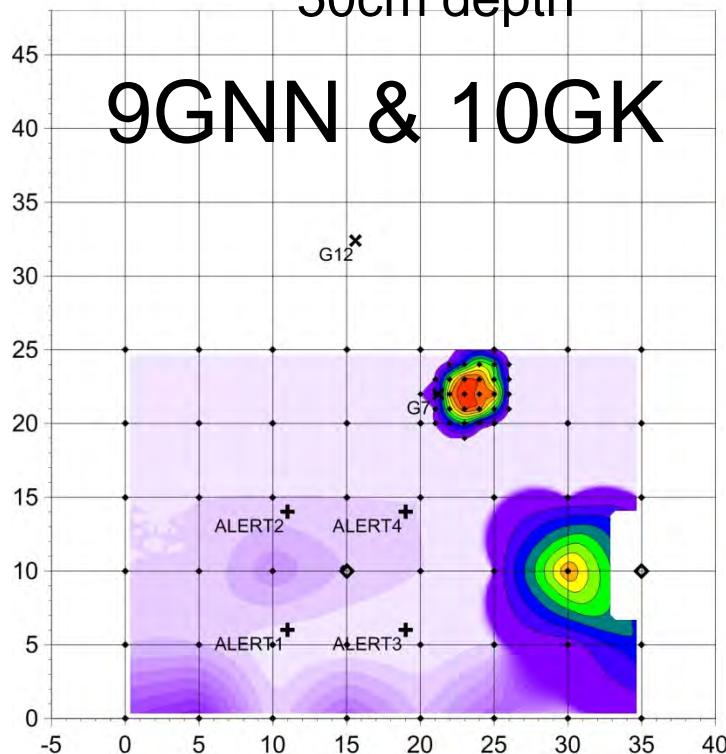

Soil Gas CO<sub>2</sub> flux (mol/mq/day) at surface

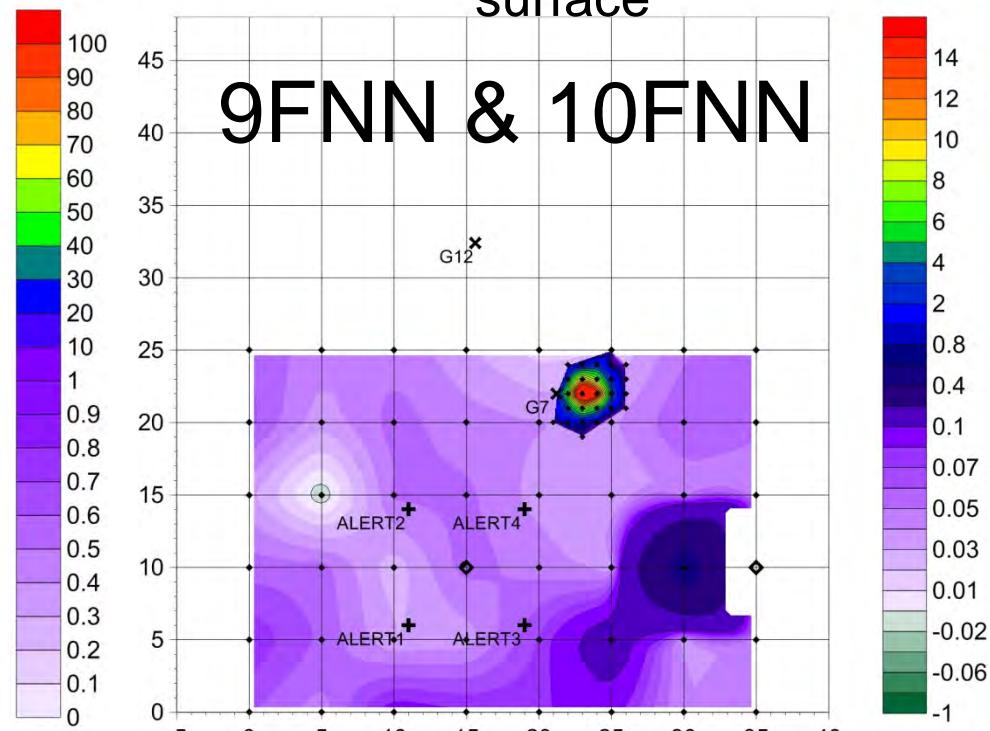

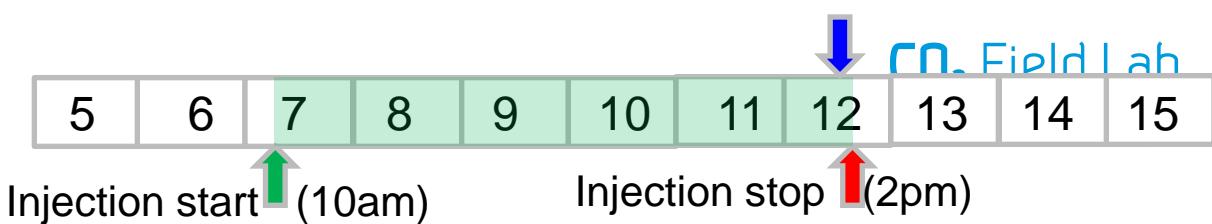

## 10/9/11 (Surveys 9 & 10)

Soil Gas CO<sub>2</sub> concentration (%) at 50cm depth

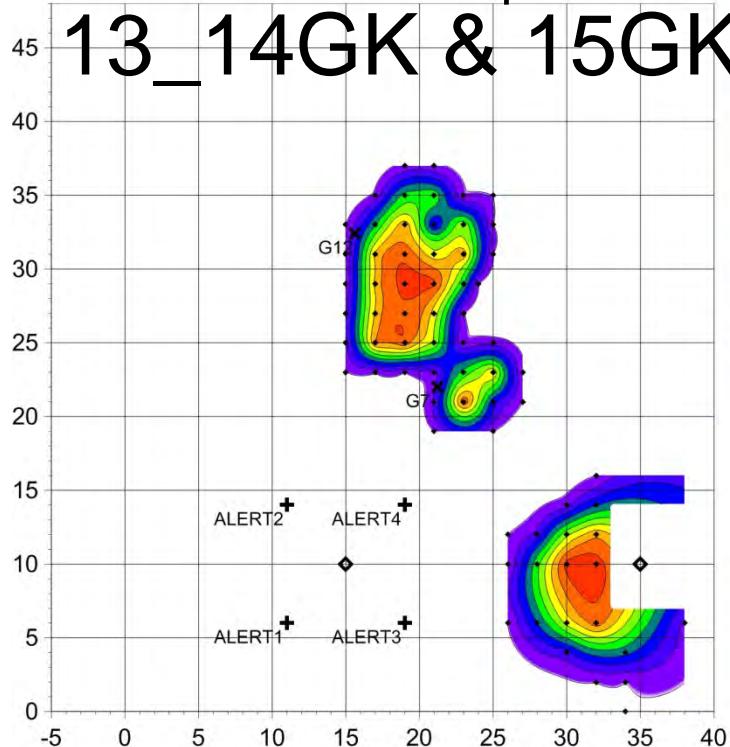

Soil Gas CO<sub>2</sub> flux (mol/mq/day) at surface

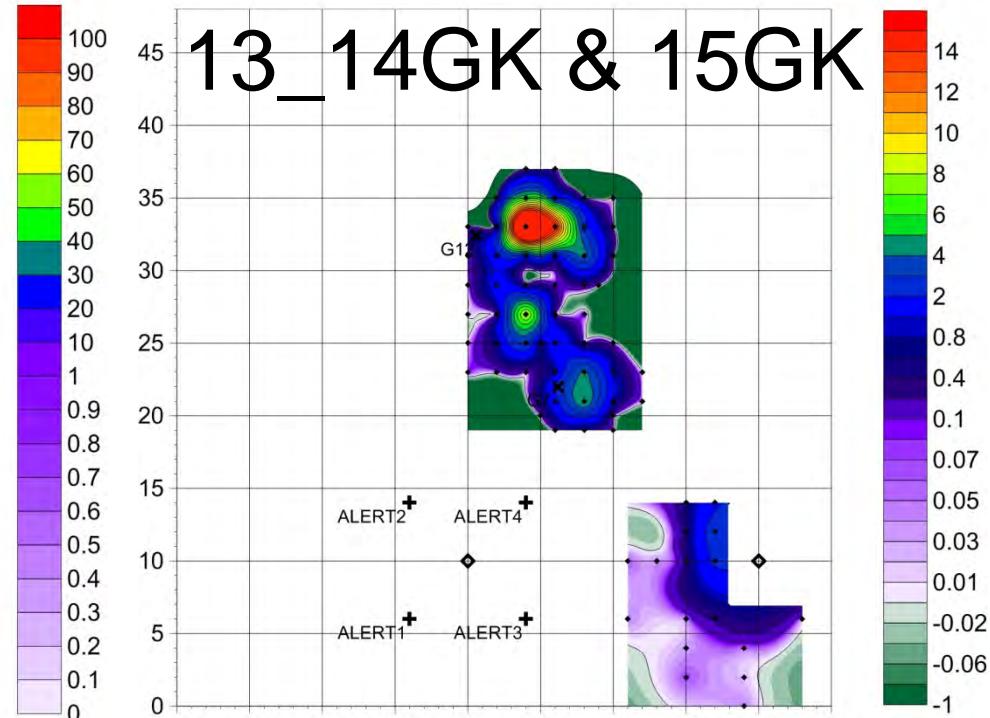

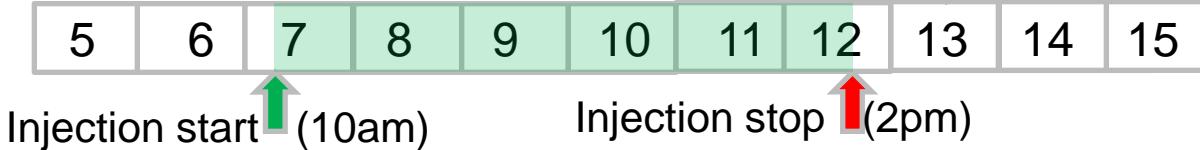

# 12/9/11 (Surveys 13,14,15)

Soil Gas CO<sub>2</sub> concentration (%) at  
50cm depth

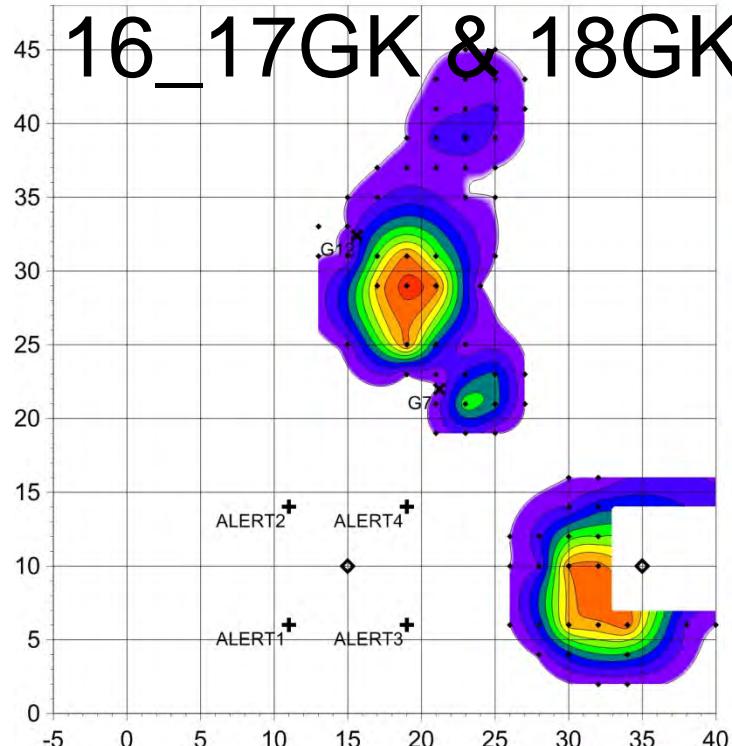

Soil Gas CO<sub>2</sub> flux (mol/mq/day) at  
surface

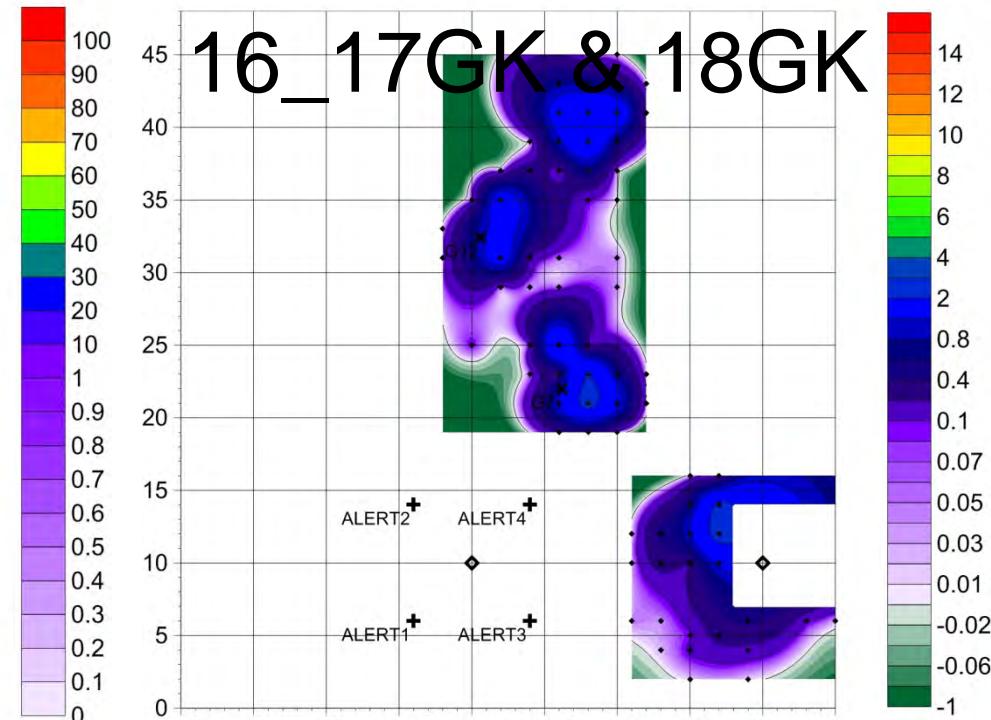

# 13/9/11 (Surveys 16,17,18)

Soil Gas CO<sub>2</sub> concentration (%) at  
50cm depth

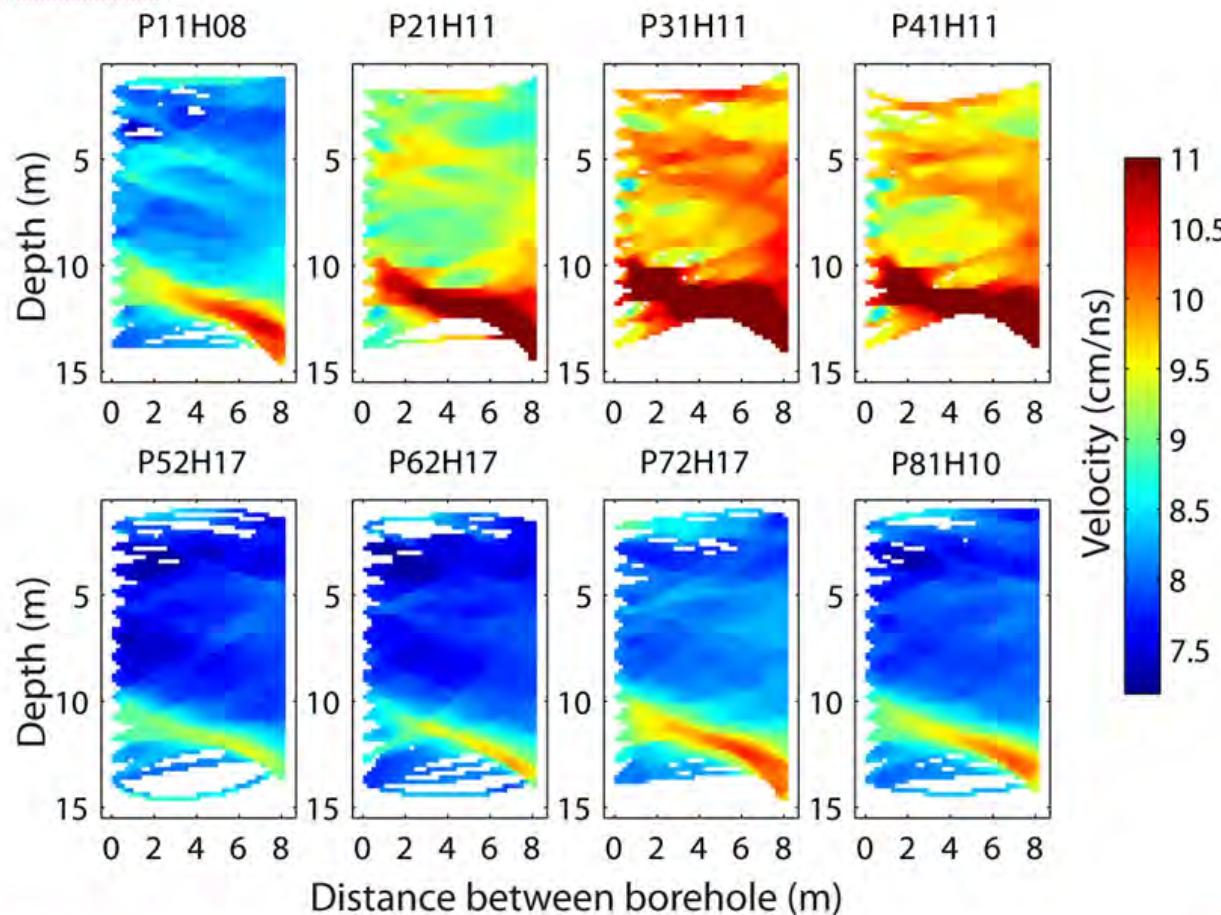

Soil Gas CO<sub>2</sub> flux (mol/mq/day) at  
surface

# Crosswell GPR Time-lapse monitoring

## Field Results

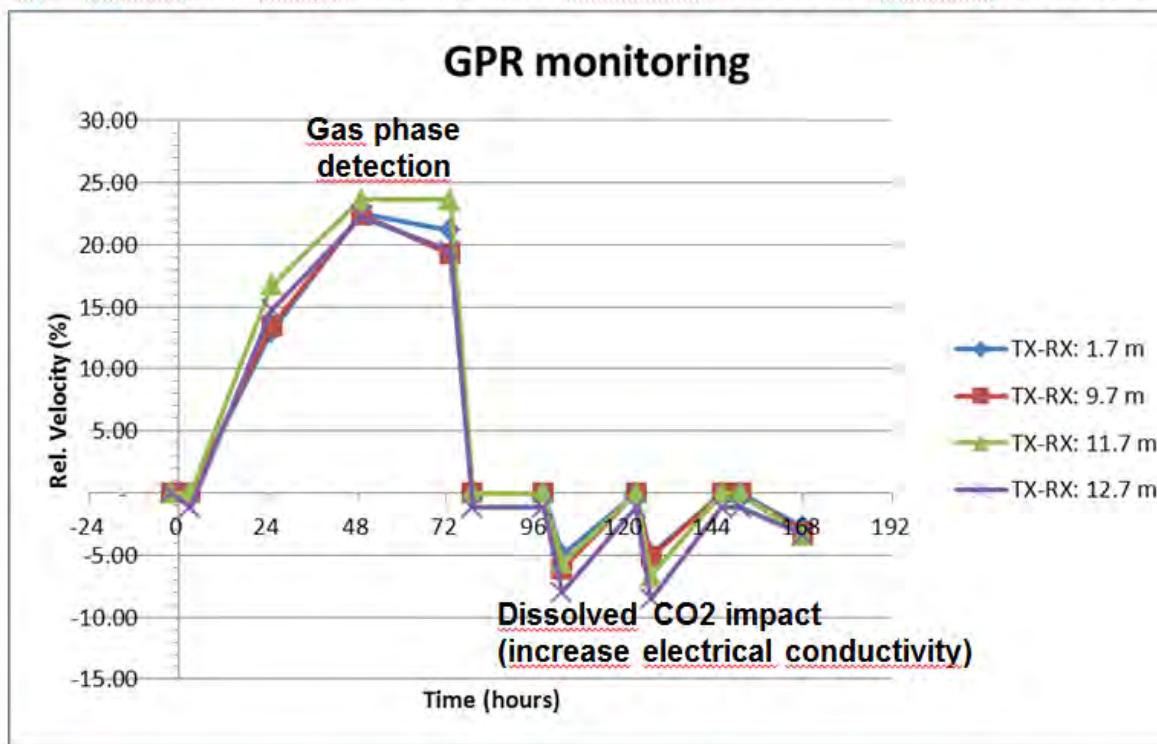

### Main result

- first a 20% increase of velocity: detection of gas phase
- After 3 days of injection, abrupt return to a constant value, ~ -5% than initial conditions: detection of electrical conductivity increase.

# Crosswell GPR - ZOP results

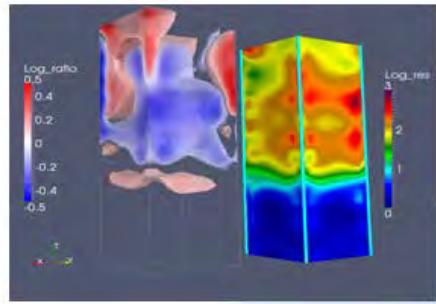

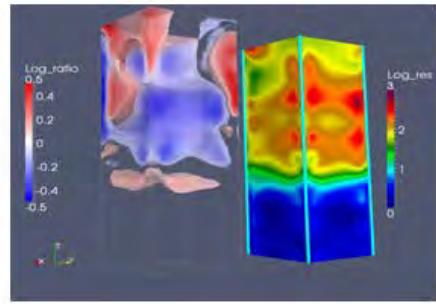

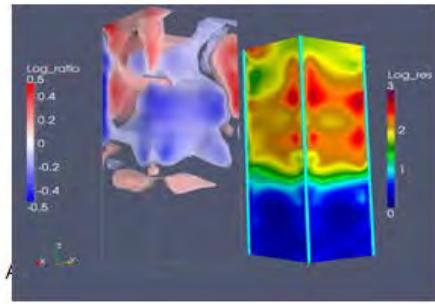

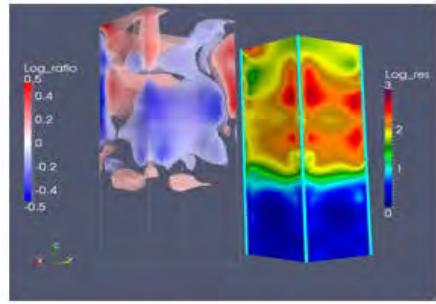

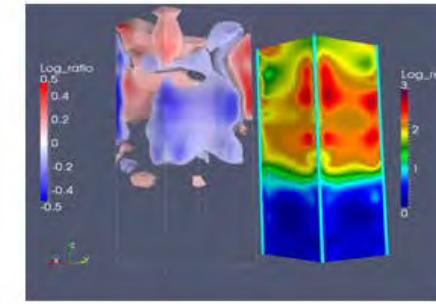

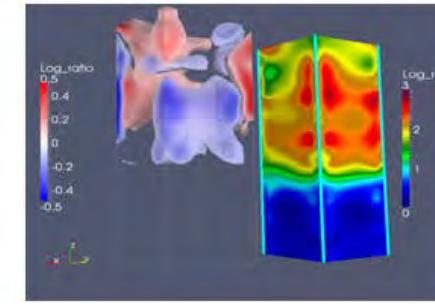

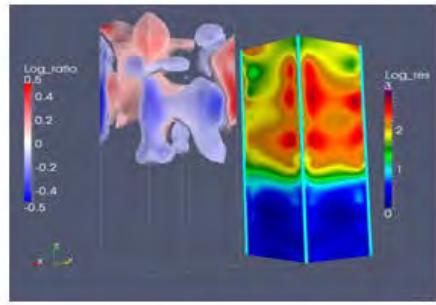

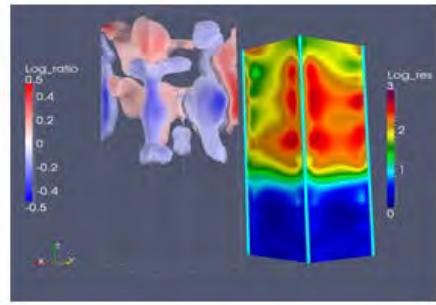

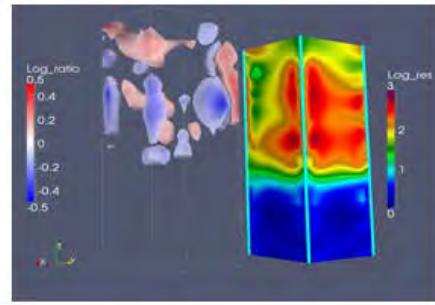

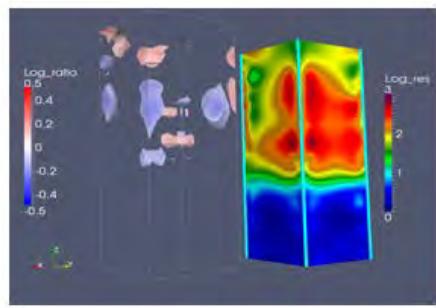

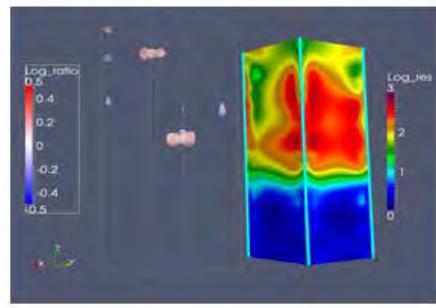

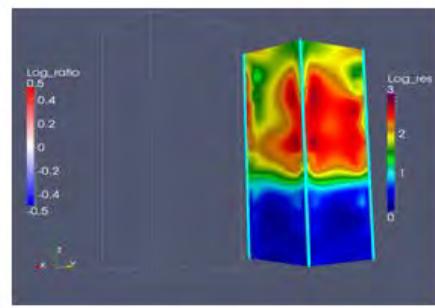

## Velocity variation vs time

At 4 depths, the travel time has been converted to relative velocity variations

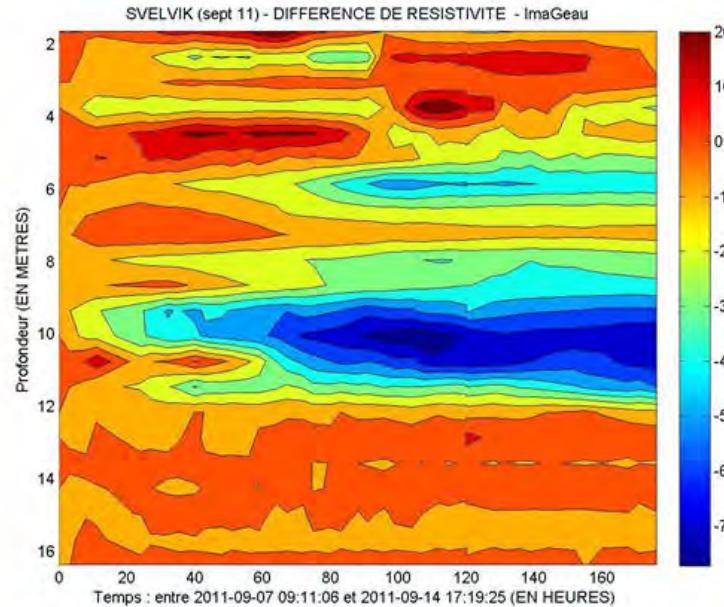

### Main result

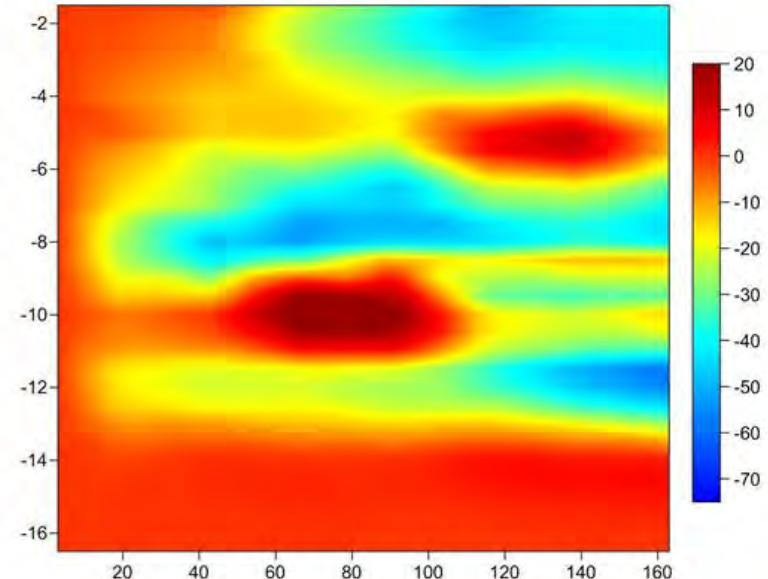

- first a 20% increase of velocity: detection of gas phase
- After 3 days of injection, abrupt return to a constant value, ~ -5% than initial conditions: detection of electrical conductivity increase.

# Comparison between ALERT and imaGeau data (Evolution of resistivity with depth over time)

imaGeau

# High permeability model

## 28 hours of injection, 190 kg CO<sub>2</sub> injected

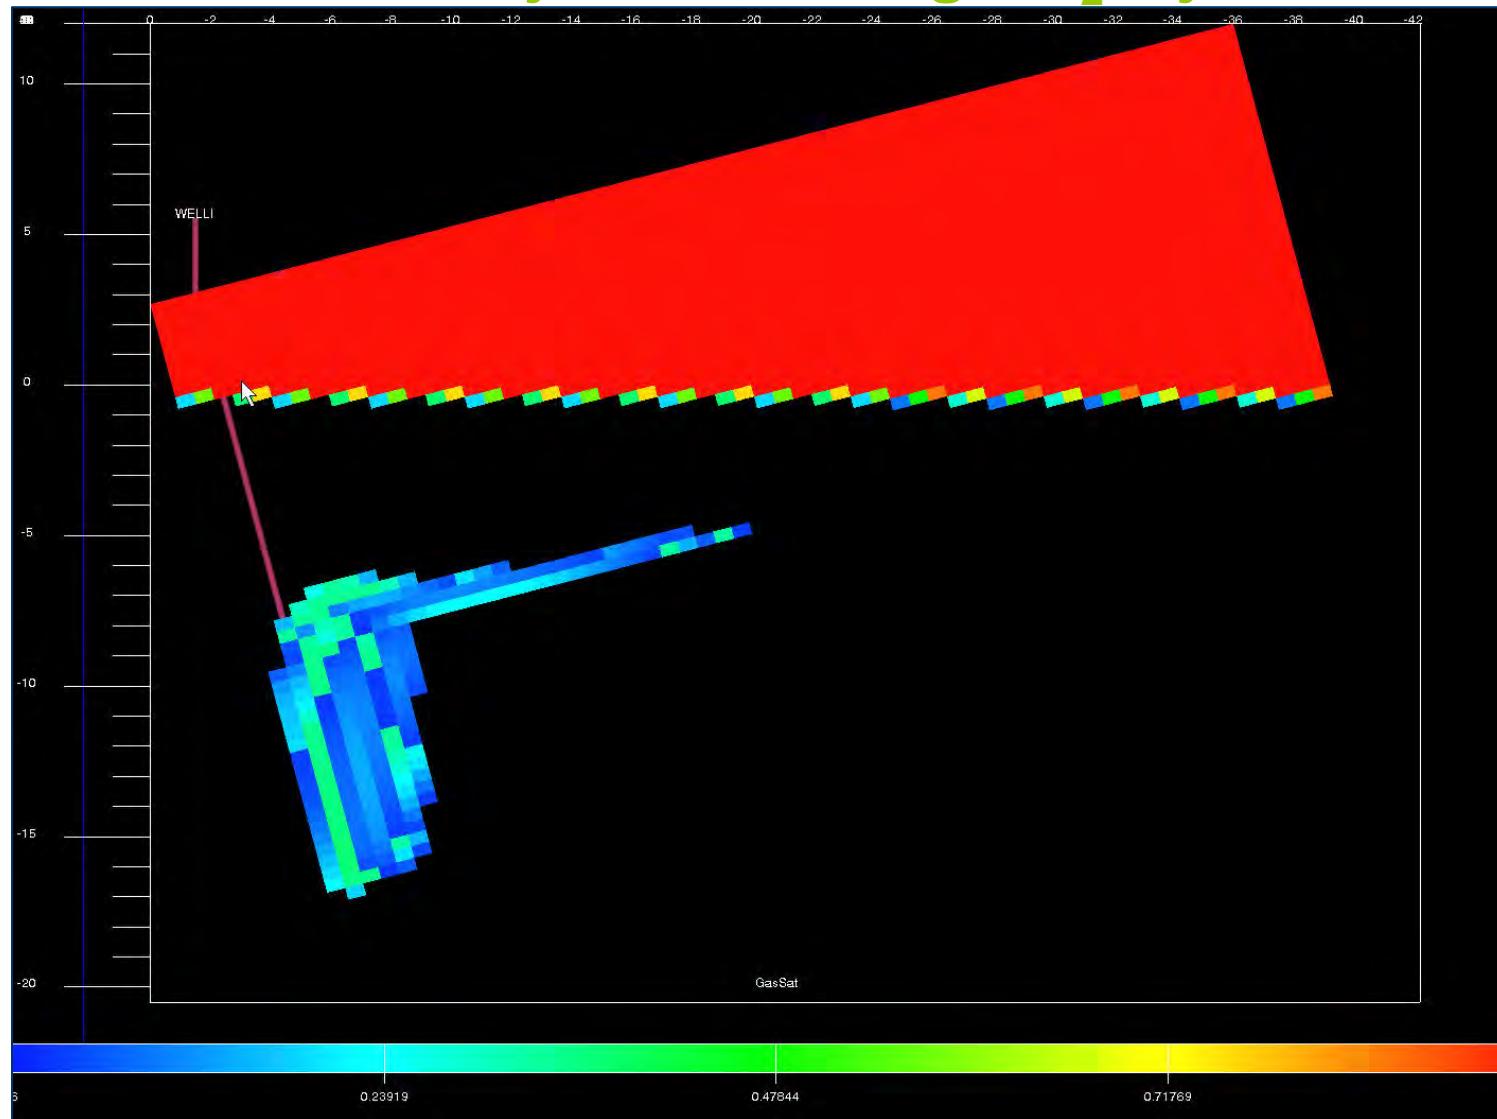

CO<sub>2</sub> Field Lab

# High permeability model

## 54 hours of injection, 464 kg CO<sub>2</sub> injected

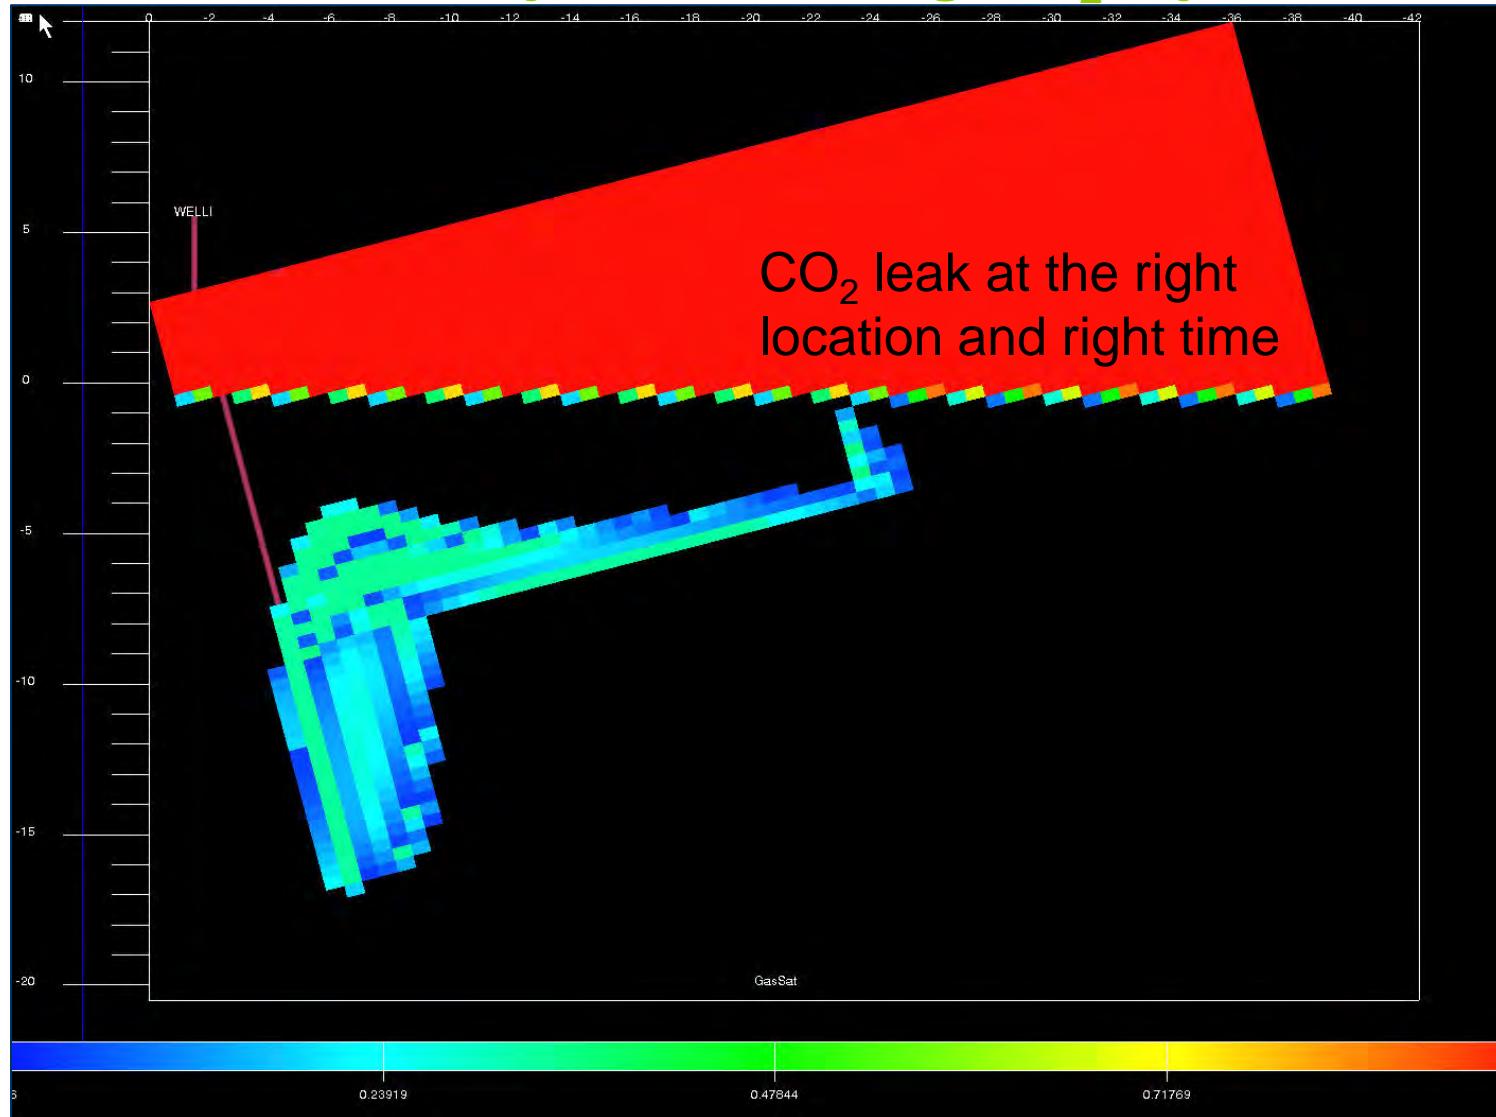

CO<sub>2</sub> Field Lab

# High permeability model

CO<sub>2</sub> Field Lab

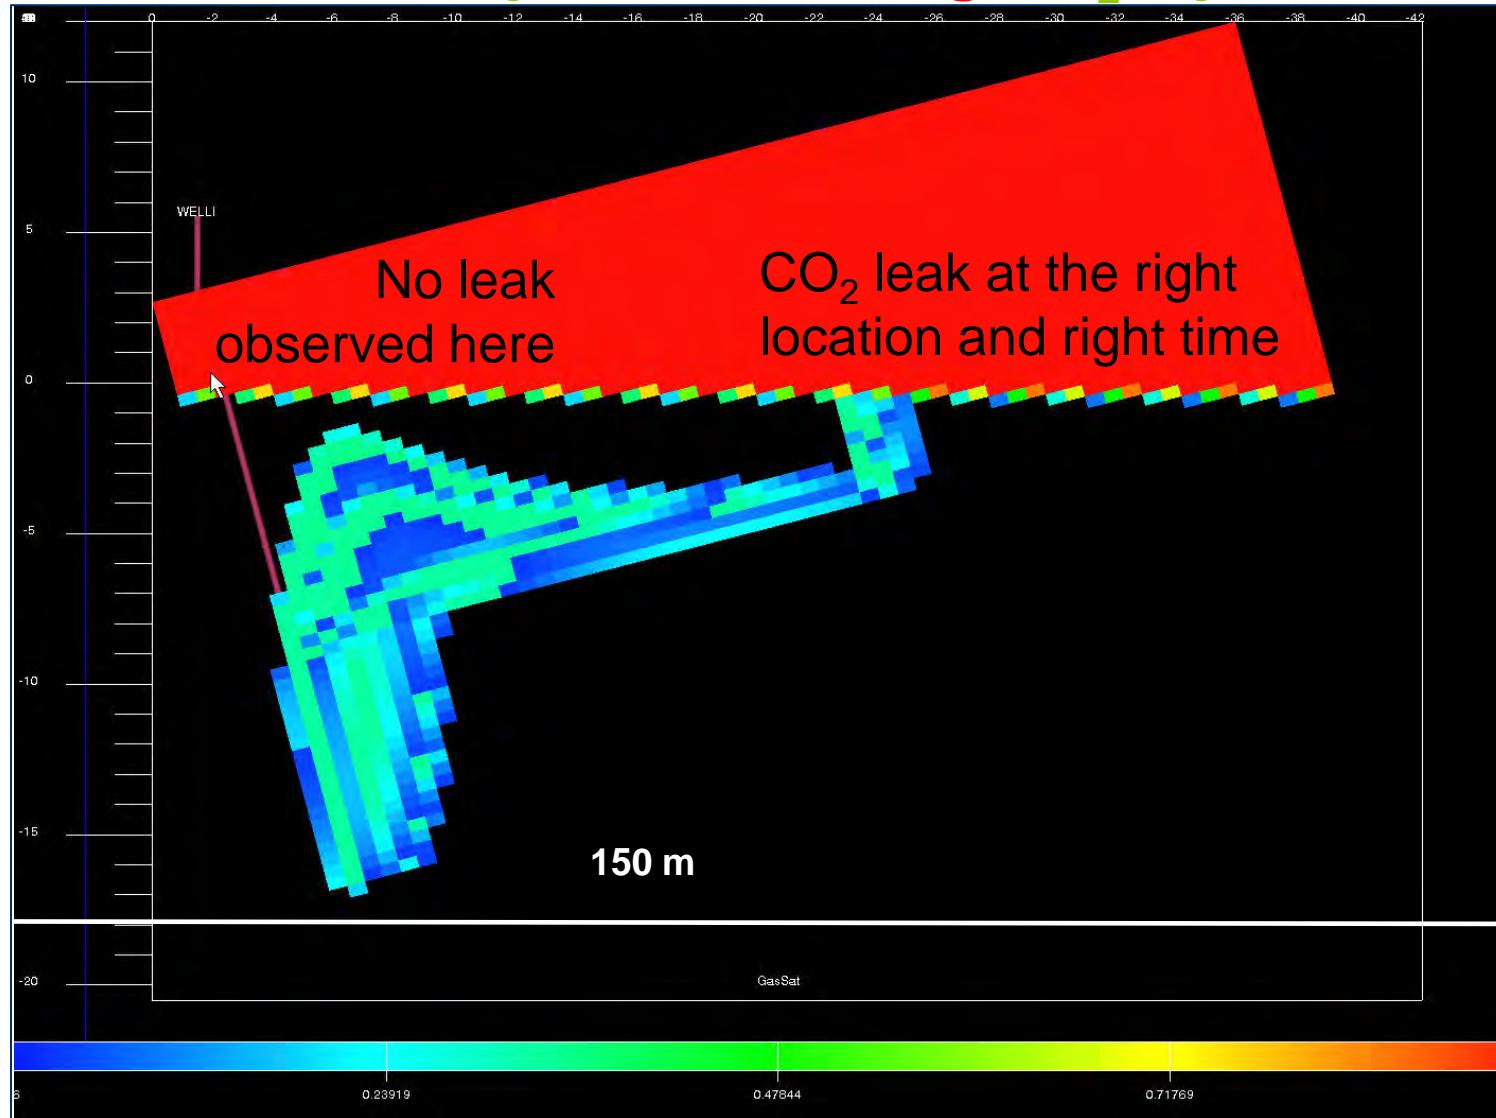

74 hours of injection, 840 kg CO<sub>2</sub> injected

# High permeability model

CO<sub>2</sub> Field Lab

96 hours of injection, 1166 kg CO<sub>2</sub> injected

# SP7: Dissemination

## External Communications

### ➤ Exposure in media

- Newspaper articles
- Norwegian national TV:
- Oil & energy minister's site visit

### ➤ Personal contact

- Public hearings (SINTEF, UiO)

- Direct mail about first survey

### ➤ Future exposure

- Press book (BV)
- Scientific publications
- Press releases

# Conclusion

- Part of the monitoring system missed the plume
  - Site characterization is very important
  - Sufficient areal coverage is needed
- A diverse monitoring system gives complementary information
- The CO<sub>2</sub> Field Lab test site is an excellent environment to test and compare technologies under controlled conditions
- More R&D and field testing is needed to determine the optimum instrumentation and sensitivity of a monitoring system

# Acknowledgments

CO2FieldLab open for cooperation and industrial support
