Acknowledgements

- **The Industrial Carbon Capture and Storage (ICCS) project is administered by the U.S. Department of Energy's Office of Fossil Energy and managed by the National Energy Technology Laboratory (award number DE-FE-0001547) and by a cost share agreement with the Archer Daniels Midland Company, University of Illinois through the Illinois State Geological Survey, Schlumberger Carbon Services, and Richland Community College. This ICCS project received DOE funding from the American Recovery and Reinvestment Act of 2009 (\$141.4 million).**
- **The Midwest Geological Sequestration Consortium is funded by the U.S. Department of Energy through the National Energy Technology Laboratory via the Regional Carbon Sequestration Partnership Program (contract number DE-FC26-05NT42588) and by a cost share agreement with the Illinois Department of Commerce and Economic Opportunity, Office of Coal Development through the Illinois Clean Coal Institute.**
- **The Midwest Geological Sequestration Consortium (MGSC) is a collaboration led by the geological surveys of Illinois, Indiana, and Kentucky**

ADM - Decatur CCS Projects

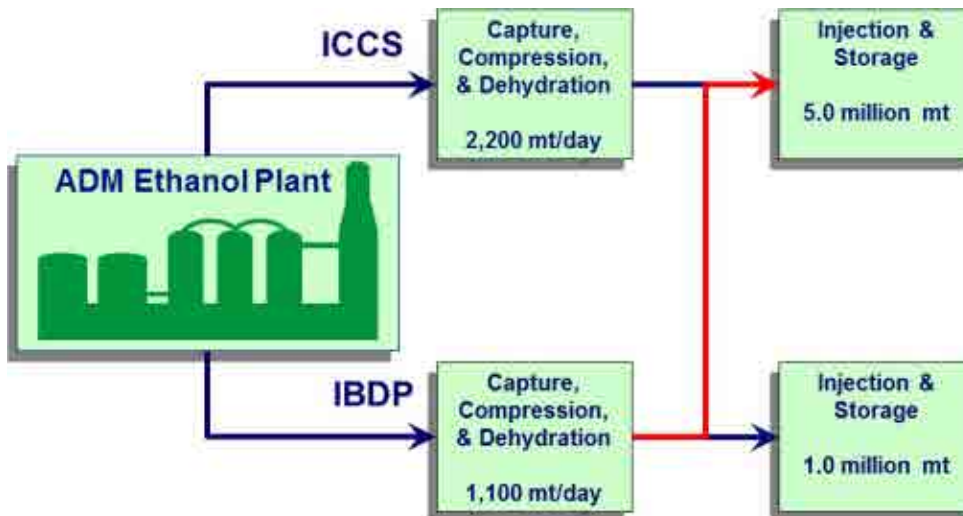

Illinois Basin Decatur Project

- Large scale geologic test to inject 1.0 million mt of CO₂ over a three year period (1,000 MT/day).

Illinois Industrial CCS Project

- Target & demonstrate advanced CCS technologies at industrial scale facilities.
- Inject and store 1.0 million mt CO₂ per year (3,000 tons/day).
- Study the interaction of two separate plumes.

Site Selection

Regional Geologic Characterization

- Cratonic basin
- 60,000 square mile area
- Structurally complex to the south with faulting and seismicity
- ADM Decatur facility is located near the center of this geologic formation
- Estimated CO₂ storage capacity between 27 to 109 billion metric tons

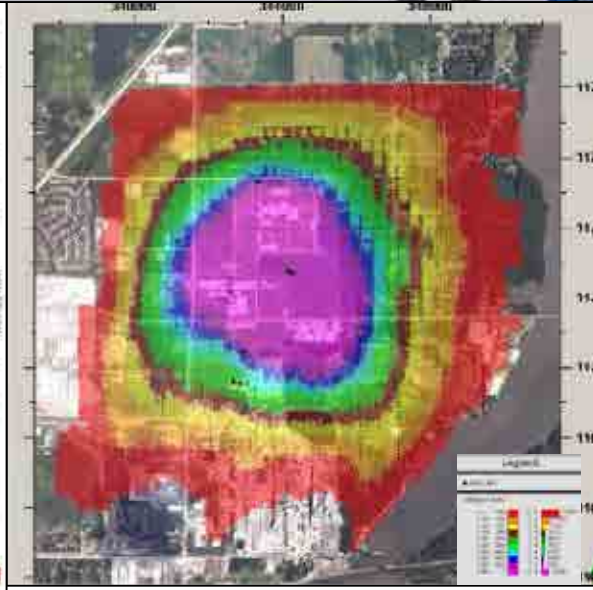

ADM

Site Characterization

Seismic Acquisition

Site Characterization

Evaluation of the Decatur Site

- The ADM site has excellent features for CO₂ storage
- High purity source of CO₂
- Thick permeable formation for storage. Porosity <20% and permeability 26 mD
- Formation depth
- Thick seal with no resolvable faulting
- Additional seal formations
- No local penetrations of the primary seal formation
- Low population density

Site Permitting

USEPA: UIC Class VI Permit

1st UIC Class VI Permit Application Reviewed by the USEPA

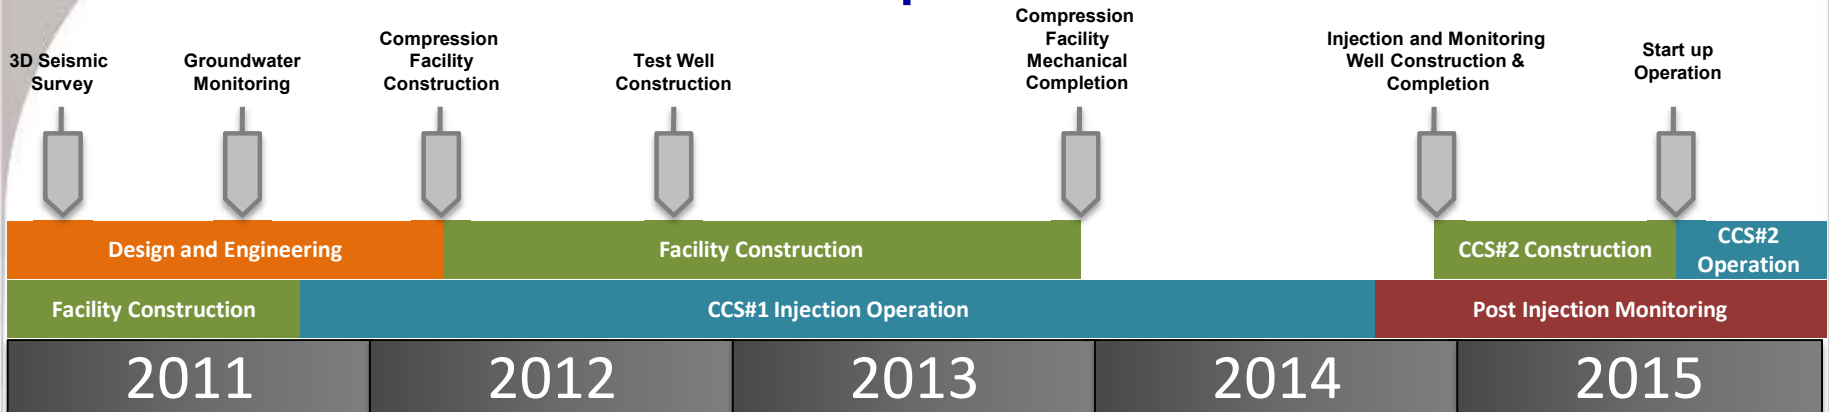

- UIC Class VI permit application submitted on July 25, 2011.
- US EPA Region V issued a draft permit on April 15, 2014.
- Public hearing conducted on May 21, 2014.
- Public Comment Period concluded May 31, 2014.
- Final permit issued December 28, 2014.

P/T Monitoring

Environmental Monitoring

Near Surface Monitoring

- Near infrared aerial imagery will be used to evaluate plant stress
- Soil resistivity characterized shallow depths for identification of optimum GWM locations
- GWM for baseline conditions and operational surveillance
- Surface soil CO₂ flux monitoring

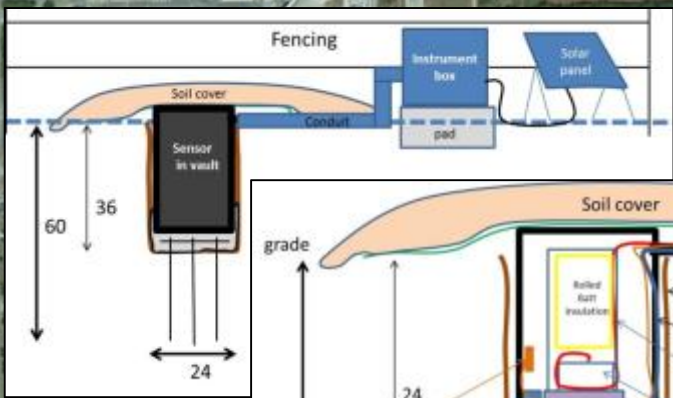

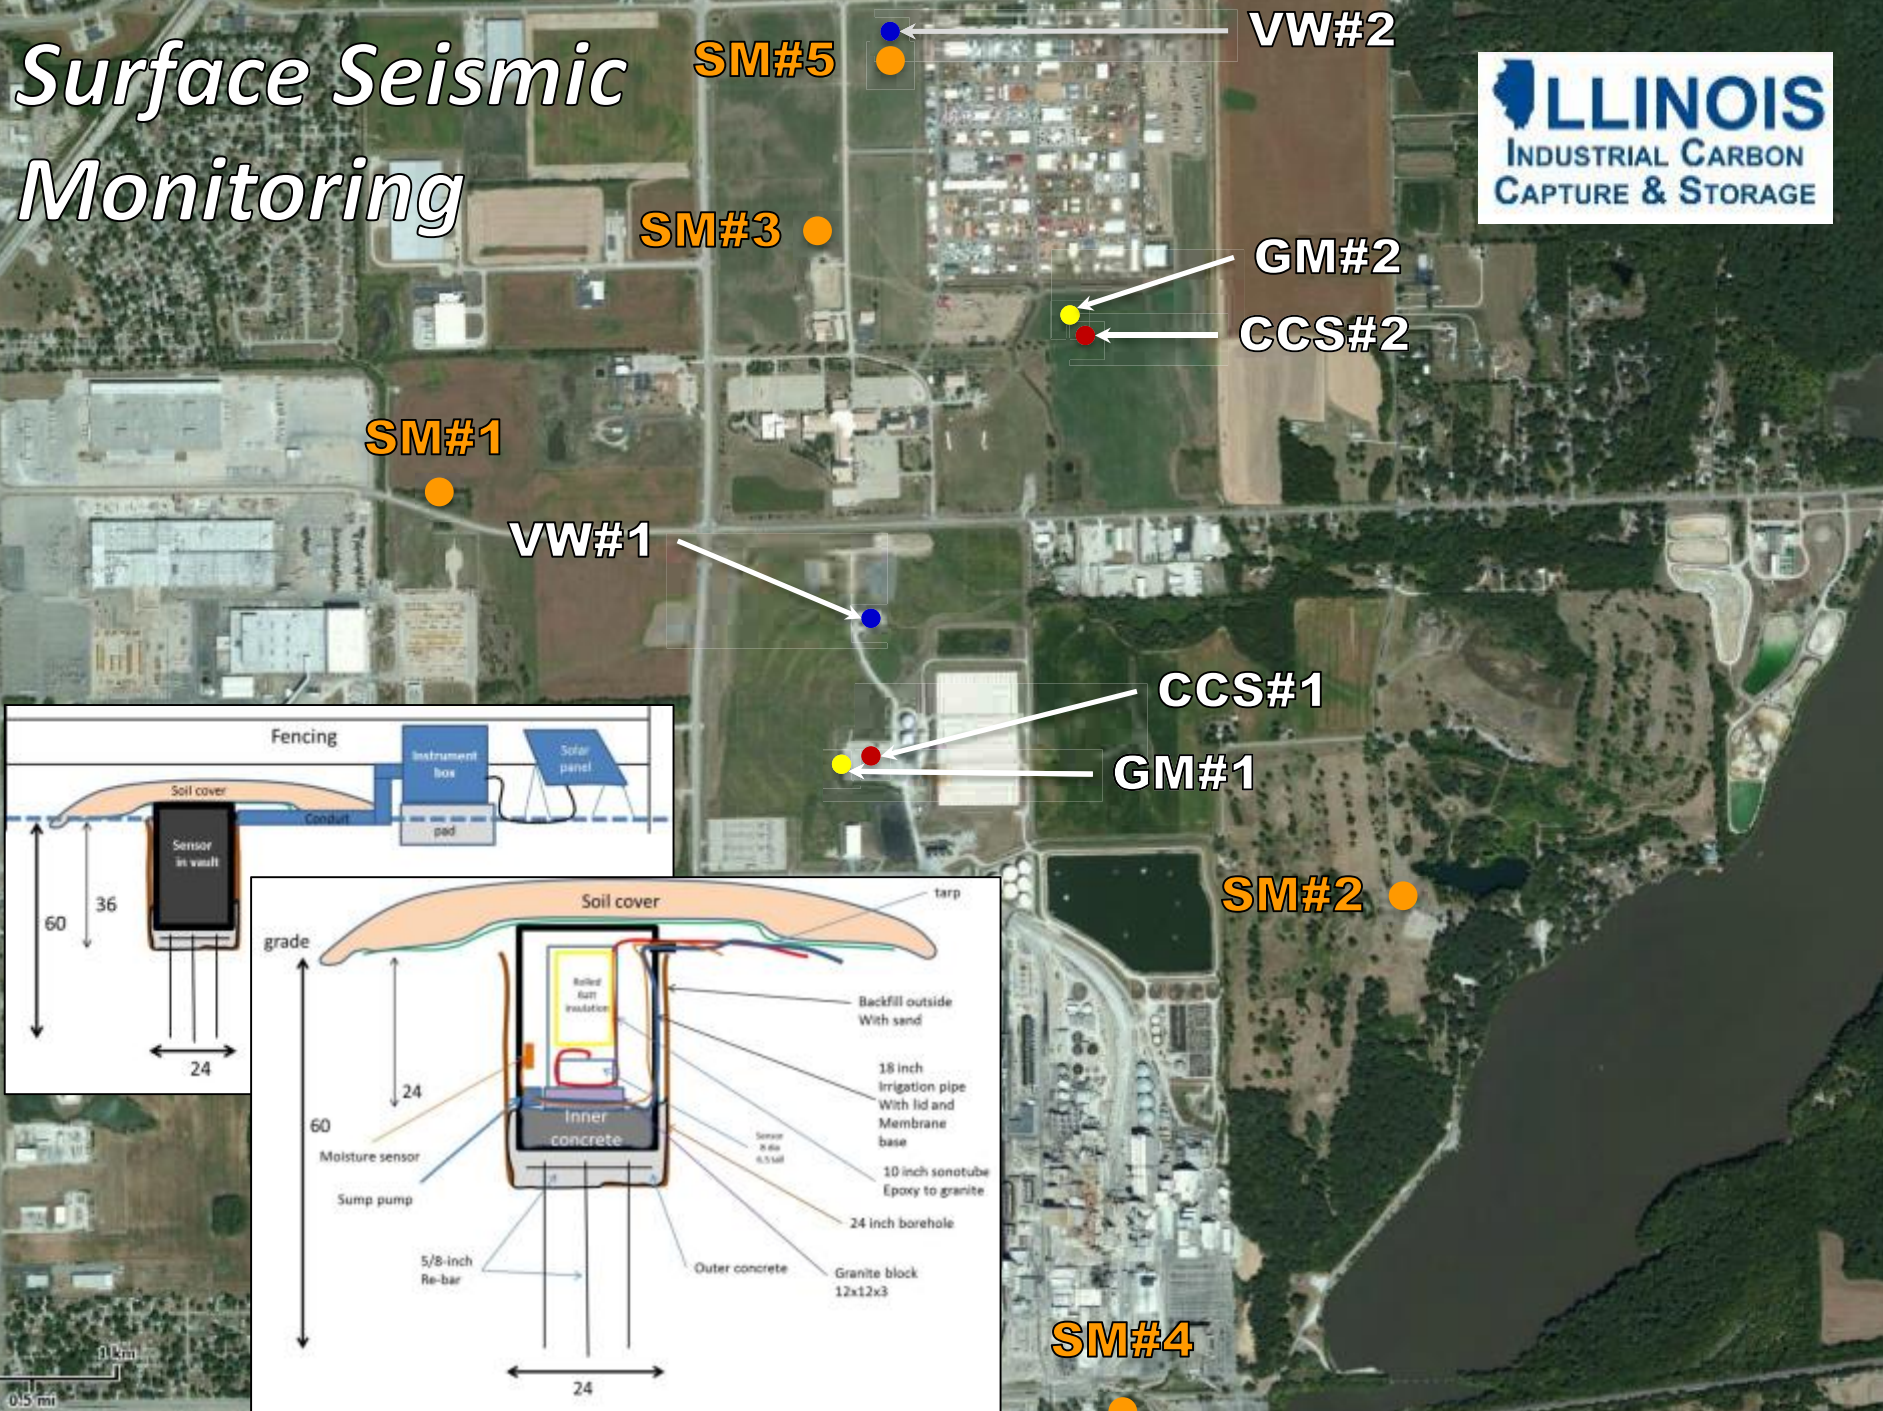

Environmental Monitoring

Deep Subsurface Monitoring

- CCS#1 & CCS#2 T/P monitoring
- Distributed Temp Sensor
- VW#1 Westbay system
- VW#2 IntelliZone System
- Multi-level sampling ports reservoir fluid collection and T/P monitoring
- P/T sensors to monitor above the reservoir seal
- GM#1 has 31 sensor array
- GM#2 5 level 20 sensor array w P/T at 3500'
- Allow offset or walkaway Vertical Seismic Profile (VSP)
- Well logging (RST)

Surface Seismic Monitoring

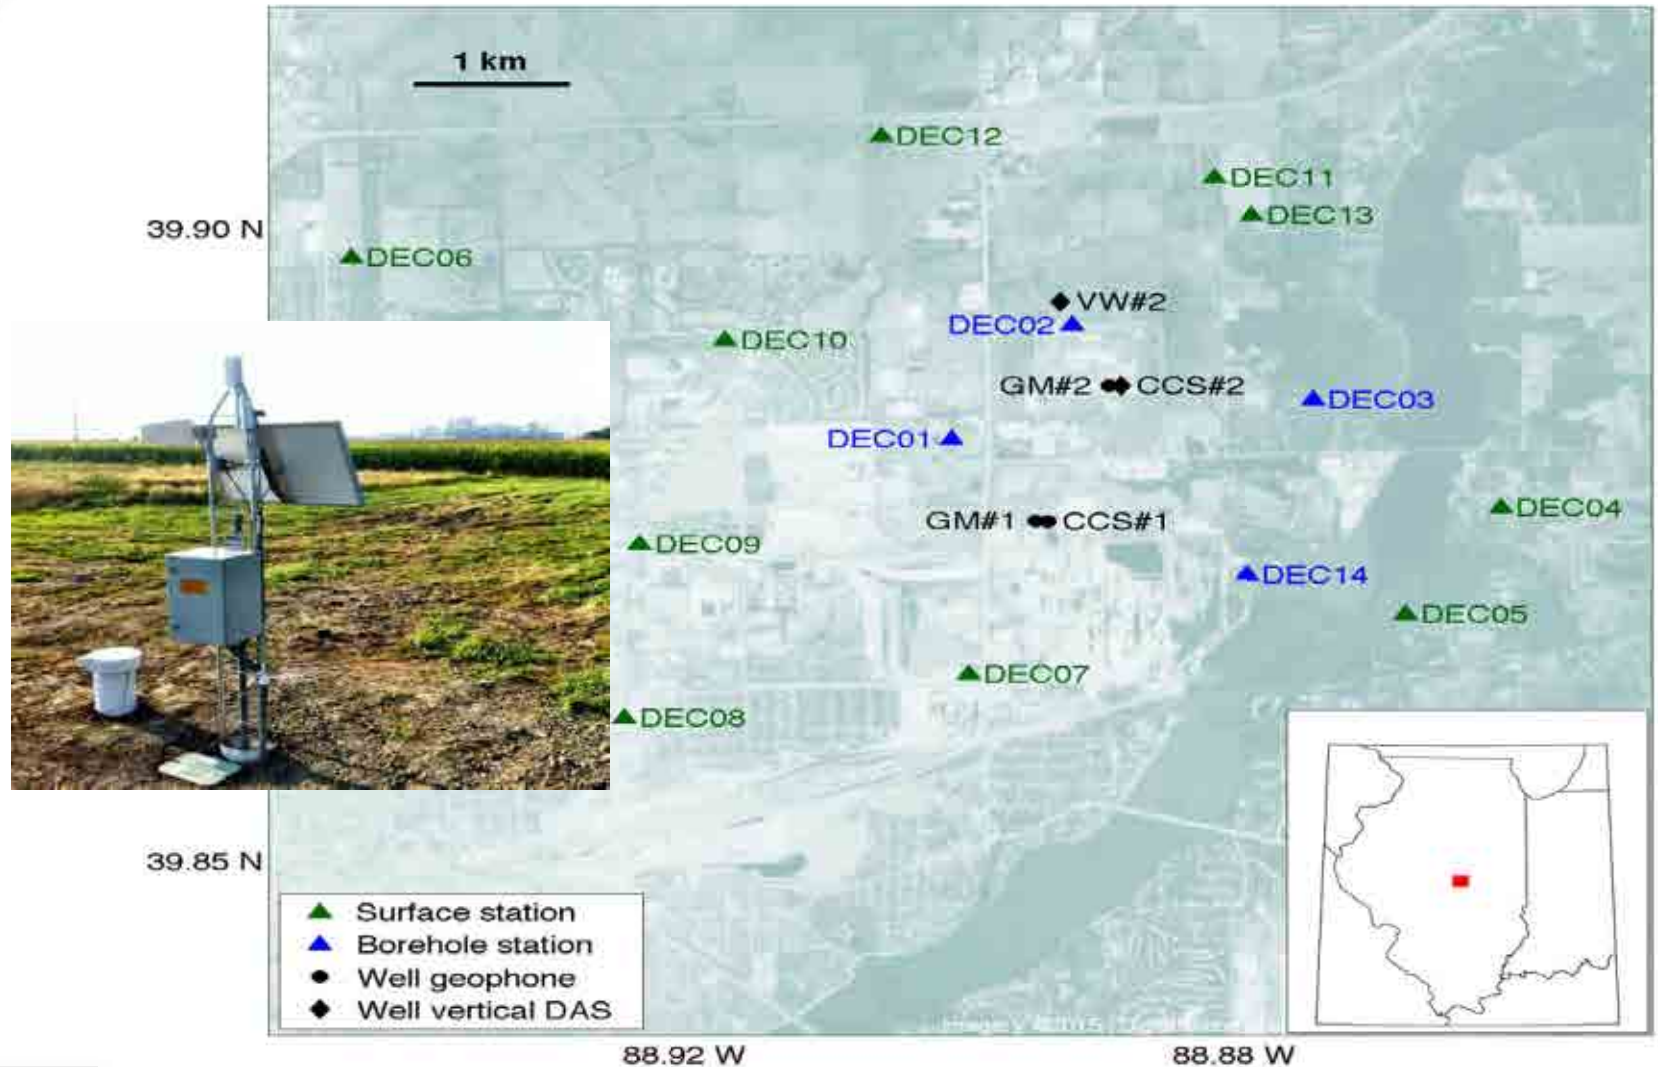

0.1 mi
0.5 mi

Seismic Monitoring

USGS Site Monitoring

Deep Seismic Monitoring

- 3 4C Geophones in CCS1
- 24 Active Geophones in GM1
- Monitoring Started May 2010
- Geoware LTD is processing data
- SCS analyzing results
- Processing of pre-injection data

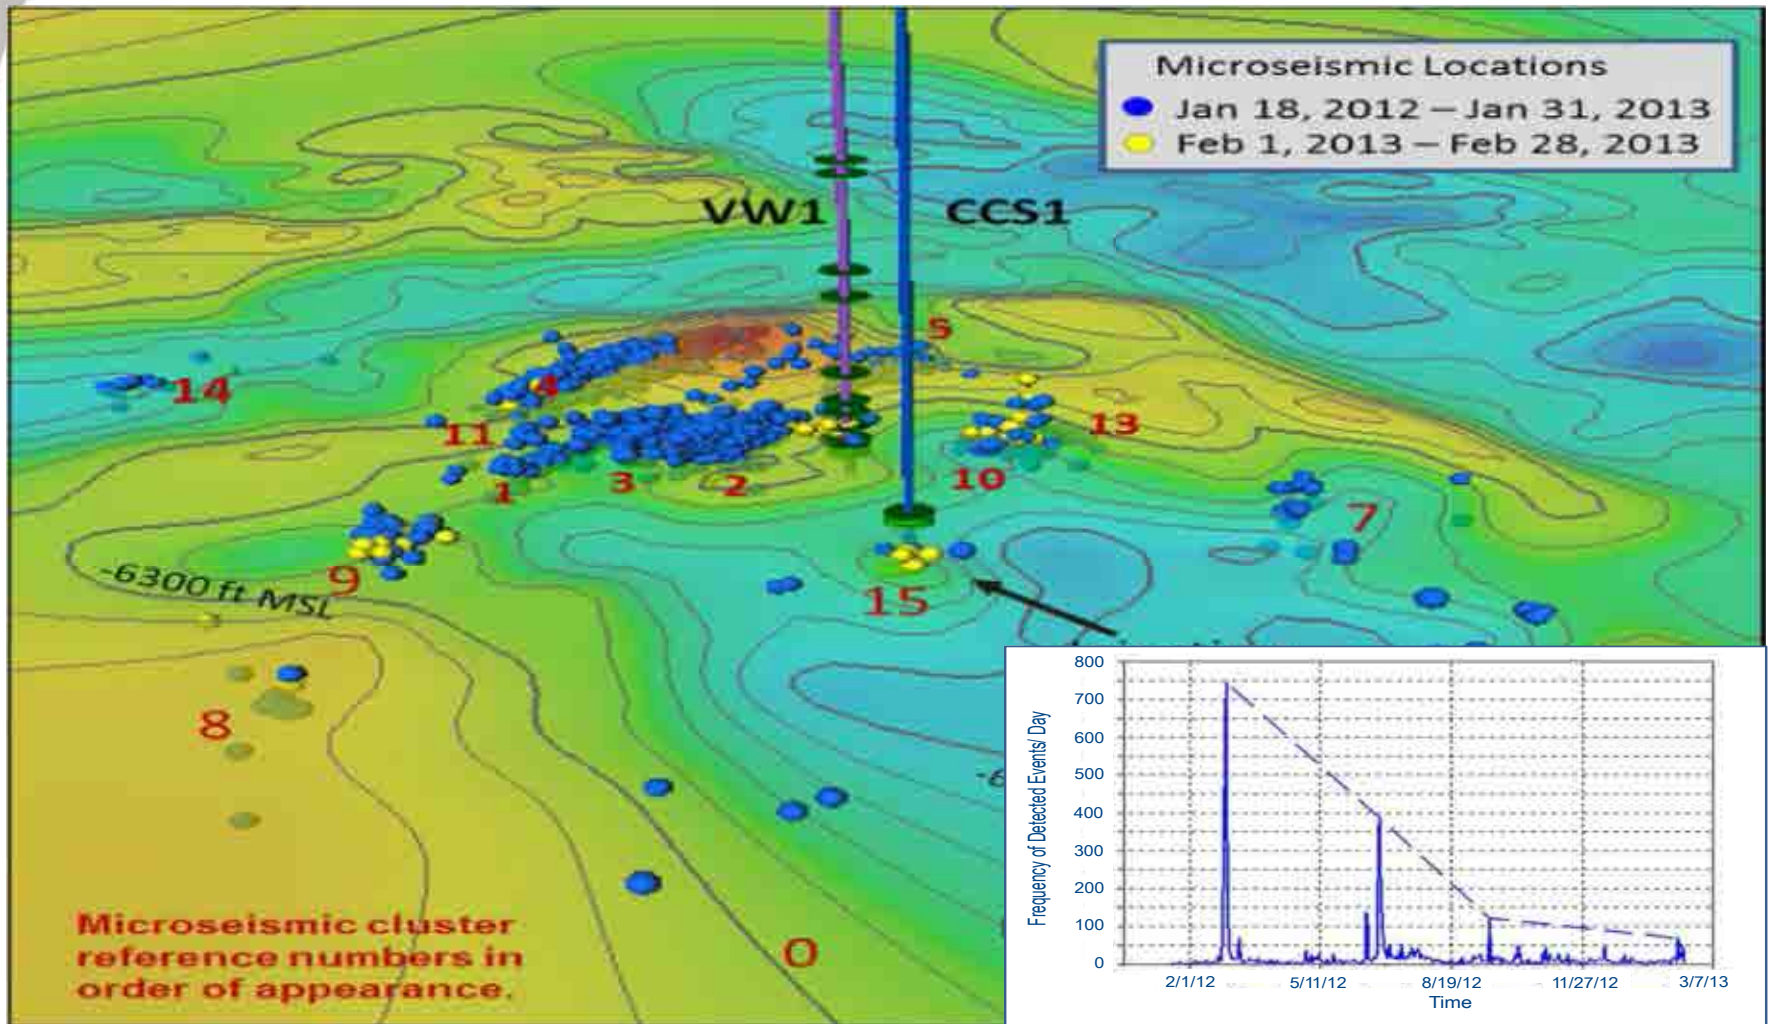

Deep Seismic Monitoring

"Slim Wave" Retrievable Geophones

Seismic Monitoring Data

Main Challenges

Alternative PISC Timeframe

- **Default PISC is 50 Years**
- **Applicant allowed to petition for an alternative timeframe**
- **ADM Proposed 10 Year PISC**
 - Reservoir Pressure Decline
 - Plume Stabilization
 - CO₂ Partitioning

Extent of Plume & Saturation Cross Section
January 1, 2070 [SCO₂ ≥ 1.0%]

Operation

50 Year Post Injection Monitoring

2015

2020

2070

Main Challenges

Alternative PISC Timeframe

- Default PISC is 50 Years
- Applicant allowed to petition for an alternative timeframe
- ADM Proposed 10 Year PISC

- Reservoir Pressure Decline
- Plume Stabilization
- CO₂ Partitioning

Extent of Plume & Saturation Cross Section
January 1, 2030 [$SCO_2 \geq 1.0\%$]

Alternative PISC Timeframe

Reservoir Pressure Decline

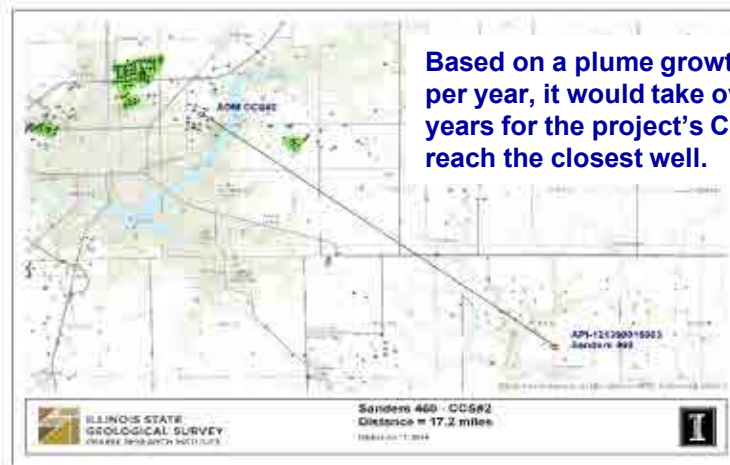

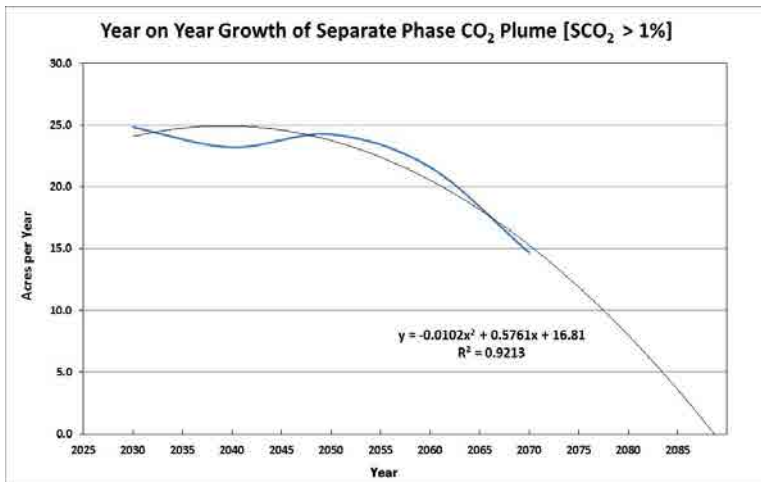

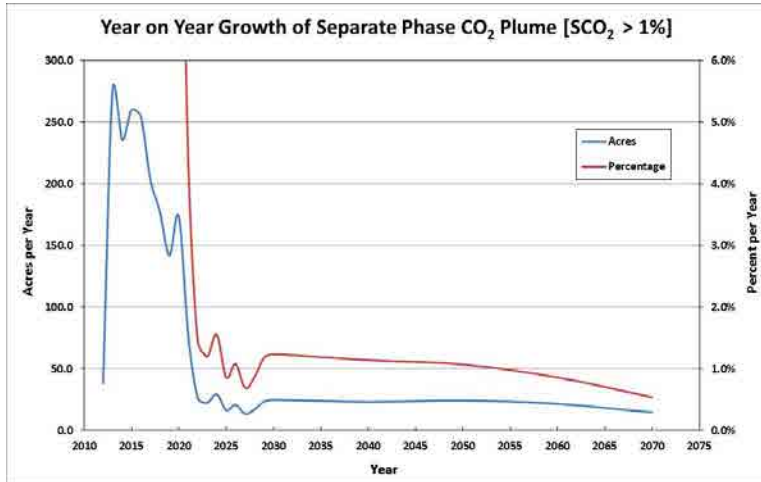

Aggregate differential pressure contours at the end of the operational period.

Alternative PISC Timeframe

CO₂ Plume Stabilization

Time Lapse VSP Surveys

NRMS Maps: M1 Mid-to Lower Mt. Simon Sandstone (6500 –7200 ft)

Alternative PISC Timeframe

CO₂ Mass Partitioning

Over 50% of the CO₂ is trapped within the reservoir after 10 years.

CO₂ Collection Facility

1750 hp Centrifugal Compressor

Low Pressure CO₂ Delivery

24" CO₂ Transfer Line (1,800 ft)

Main Compression Building

3,250 hp Reciprocating Compressors

Main Compression Building

Main Compression Building

Interstage CO₂ Coolers

CO₂ Dehydration Unit

Main Compression Building

45 Stage CO₂ Booster Pump

HP CO₂ Transmission Line

8" HP CO₂ Transmission Line (1 Mile)

IBDP Injection Well

Well head*

CO₂ Based Chemicals

• Carbonates

- Glycerol Carbonate
- Propylene Carbonate
- Dimethyl Carbonate

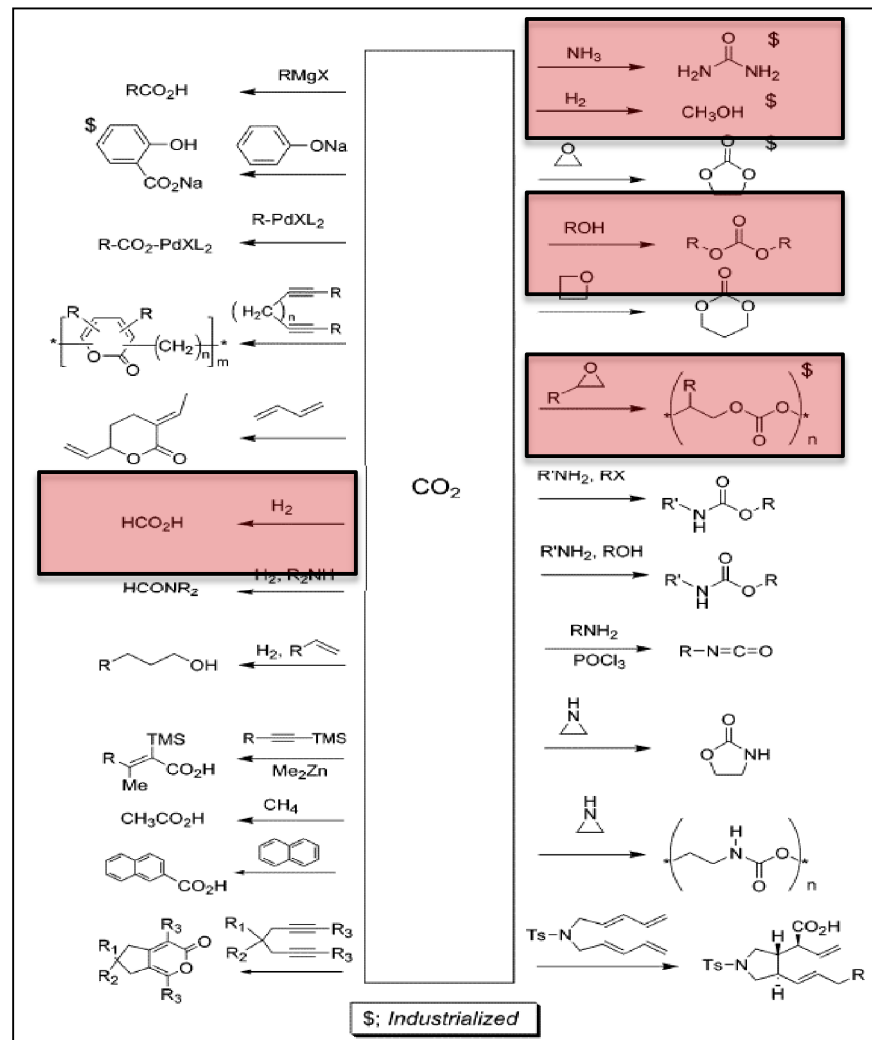

• Fertilizers

• Alcohols

• Fuels

• Acids

• Others

Transformation of Carbon Dioxide, Sakakura, Choi, & Yasuda, 2007

Enhanced Oil Production

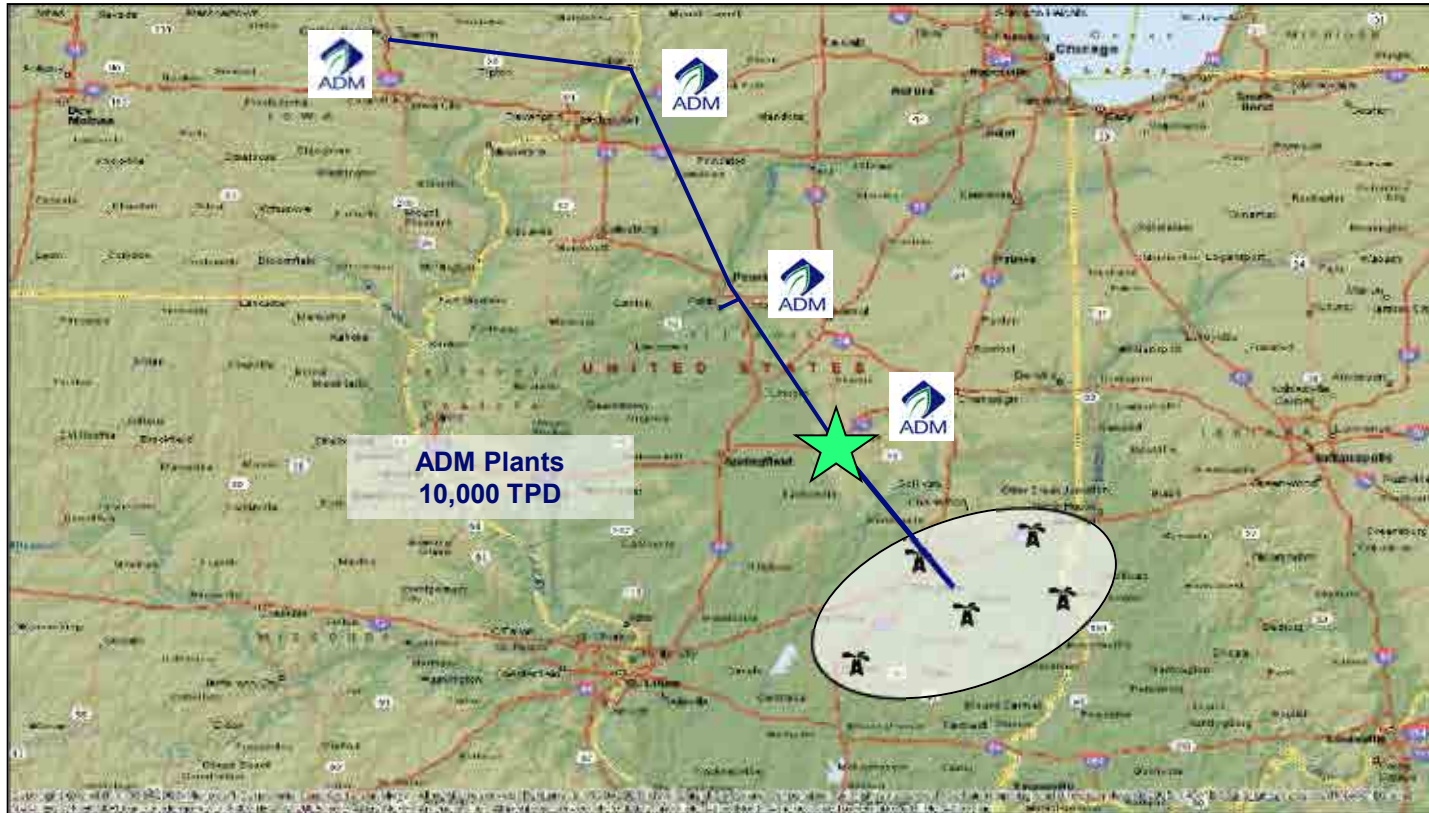

<http://www.youtube.com/watch?v=azLVjYij5U4>

Cross-section illustrating how carbon dioxide and water can be used to flush residual oil from a subsurface rock formation between wells

Illinois Basin Potential

- Illinois Basin - Oil Producing Region
- Est. Recoverable Oil = 700 million bbls⁽¹⁾
- Est. CO₂ Requirements = 150 million tons

(1) BASIN ORIENTED STRATEGIES FOR CO₂ ENHANCED OIL RECOVERY: ILLINOIS AND MICHIGAN BASIN OF ILLINOIS, INDIANA, KENTUCKY AND MICHIGAN; Advanced Resources International, February 2006

Future Commercial Potential

- **Direct Application**
 - EOR
 - CO₂ Liquids
- **Product Development**
 - CO₂ Based Chemicals
- **Process Development**
 - SC Extraction
 - Solvent Applications
- **Carbon Management**
 - Storage
 - Trading & Risk Management

Environmental and Cost Benefits

GHG Reduction & Fuel LCA

- Reduction in site's CO₂ emissions.
- Process has a GHG reduction efficiency of 94% based on using Midwest electricity grid average.
- Reduction of the carbon footprint of fuel ethanol.
- The operational expense is significantly lower than other forms of CO₂ capture.
- 15 billion gallons annually, represents about 40 million metric tons of CO₂.

Thank You!

Industrial Carbon Capture and Storage Project:

- U.S. Department of Energy Award No. DE-FE-0001547
- Administered by the DOE's Office of Fossil Energy
- Managed by the National Energy Technology Laboratory
- DOE cost share from American Recovery and Reinvestment Act of 2009

Cost Share Agreements:

- Archer Daniels Midland Company
- University of Illinois through the Illinois State Geological Survey
- Schlumberger Carbon Services
- Richland Community College
