Freeport LNG's project will have no "environmental benefit" at the local, state, or national level. It will benefit FLNG, Dow Chemical, and ConocoPhillips monetarily while destroying four residential canal communities, a section of Oyster Creek, and parts of the Brazoria National Wildlife Refuge, all located in Brazoria County, Texas. Rather than using natural gas domestically, these companies will produce and ship liquid natural gas abroad enabling foreign companies to use our precious natural resource powering industries that creates foreign jobs. How is this a benefit? How will FLNG benefit the local environment while spewing over three million tons of emissions in the middle of our subdivisions? How will they benefit the local environment by building a plant in a designated wetlands area on a natural slough draining directly into the Brazoria National Wildlife Refuge? Freeport LNG, while claiming to be "socially responsible" is anything but! Rather, this company cares little for the local environment and folks, fish, and fowl that populate it. Please deny any permits to a company that has so little regard for our environment they would knowingly destroy neighborhoods containing hundreds of people and estuarine areas along the Texas Gulf Coast! They have already destroyed Quintana, Texas, by building a lng terminal in the middle of that small city.
