**Importance:** High

---

Today, the Department of Energy (DOE) is proposing a change to its procedures to reflect changing market conditions, ensuring an efficient process that will also enable the Department to have more complete information when it makes public interest determinations for Liquefied Natural Gas (LNG) exports to non-Free Trade Agreement countries. In addition, DOE will initiate an updated macroeconomic study and is releasing two environmental reports that explore the environmental impacts of unconventional natural gas production and lifecycle greenhouse gas impact of U.S. LNG exports.

For more information, see:
