Subject: frack export obvious nix why?

export is wealth to a few non pennsylvanians at the cost of our state farming. who will buy benzened milk, benzened corn.

what explosion EVER stays contained in the hardest wall, rather it moves to the weaker areas IMMEDIATELY. so the shale is NOT the place the explosion with the TONS of chemicals in the pressurizedwater will stay, oh no.

instead it will find the new cracks and move UP the softer ground ... to the water table. you see. how obvious is that? and we are finding water contamination in the water table in wyoming. of course. DEA study. ten years late the study? that is disturbing.
