

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Roxanne Grossman

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michelle Fjalltoft

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

With a mother living in fracking country, I have heard this industry call those who didn't sign over their mineral rights, or encourage community members who were favorable to their business, un-American for not helping to make the US energy independent. Now they want to export gas to keep prices high and make their environmentally challenging processes more profitable. This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dawn Albanese

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Charlotte Zampini

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Natural gas has a multitude of industrial uses, including providing the base ingredients for plastic, fertilizer, anti-freeze, and fabrics. Natural gas is consumed primarily in the pulp and paper, metals, chemicals, petroleum refining, stone, clay and glass, plastic, and food processing industries. These businesses account for over 84 percent of all industrial natural gas use. We will need natural gas in the future to continue supplying the needs of industry and the general population. Yet it appears that the petroleum industry wants to pump it out of the ground as fast as it can and, in some cases, sell it to foreign countries who might even be hostile to the USA. All of this rush is for the purpose of fattening the pockets of the wealthiest people in our country. Have you ever heard of conservation of natural resources? The consulting firm hired by the DOE to monitor 'fracking' is an industry-friendly group that only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water. The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Holmquist

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Verne Presnall

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it benefits the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

S Misiak

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Sincerely,

Greg Henderson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

A report written by those who will profit from your approval should be looked at with great care. Fracking in itself causes contamination of our water supply. This problem by itself should be of great concern to those who are in a position to guard the health of our citizen and environment. The industry refuses to release the names of the chemicals it uses under the guise that if they release the information other's will profit from it. Either they have a patent or not. If so, they are covered. It is outrages that they have hidden this vital information from the public and before any permit is granted to any more franking this needs to be resolved and the health issues clearly known.

The report submitted completely ignores or unfairly dismisses the real costs to Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anne Wolf

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Nancy Strong

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Jonathon Russell

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

A conclusion 'demonstrating' an economic benefit is arrived at only through a focus on money that would flow out of our pockets and into the natural gas industry and the wealthiest people in the U.S. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

It is the responsibility -- legally and morally -- of DOE to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities.

The environmental impact statement must include the chemical damage and fracking to water supply and water tables, it must also include air quality, and pollution, and it is needed to apply tighter rules to the drilling and use of water and runoff. I have been unable to find any articles about fracking that has anything good for communities except the money. But one can not breath and drink money.

So far the Fracked method now used is creating problems wherever it is being used. It is destroying private property for growing crops, water systems for human and animal consumption and the air that breathe. I have no idea why we wish to destroy our land, water and air under our homes and across our nation.

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eric Ramstrom

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Patricia Moran

Department of Energy

Dear Energy,

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We are behind Europe in investing in environmentally forms of energy. We should be leading in making solar, wind and geothermal energy work.

Do not give us only one sided information about the research into Fracking. Please make sure you give us many different studies, from independent sources, done both within and without the United States, where many points of view are expressed. Then make sure you represent the interests of all Americans.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Amanda Mccoy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

MORE BS FROM INDUSTRY TIES THAT EVERYTHING IS SAFE - BAN FRACKING NOW NOW NOW NOW BEFORE OUR WHOLE WATER SUPPLY IS POLLUTED. STOP PLAYING POLITICS WITH OUR LAND, WATER, AND AIR!!!!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Shabazian

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

richard clark

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

William Mckinsey

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Oil and gas extraction facilitated by hydraulic fracturing is not inherently evil and can be safe when properly executed. The profits from that activity are private while the cost for any error are public. Until the industry accepts a policy of strict liability its activities require scrutiny and regulation

The combination of externalized costs and existing subsidies for fossil fuel extraction mean that the product is partially owned by the public when it leaves the wellhead. Until the industry compensates the distributed environmental costs and refuses the subsidies, it is reasonable to require that the extracted products benefit domestic consumers before foreign ones.

Any policy that increases the direct and indirect costs to the American people but benefits foreign consumers to profit those who do not live among the rigs is at best premature and at worst inherently parasitic on the rest of the economy.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Natalie Van Leekwijck

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

If you don't know what damage the fracking does, stop until you can do an adequate evaluation. Listen to some of the interviews with people in the fracking areas. It appears that the damage will still occur over extensive time periods once the cracking has occurred. It is not a temporary situation. Community damage is extensive and ground water quality is destroyed. How can you allow this **** of the environment to continue?

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Barry White

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Exporting US gas does not help our country's energy independence. Keep American resources domestically. How can we heat our homes affordably and move freight or people with natural gas if we trade our advantage away.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ricky Hurley

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Peter Gair

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Watching the roll-out of the natural gas industry as it works to finally turn a profit from harmful fracking in our communities gives me serious concerns for the state of democracy in the US. Last year, the American Petroleum Institute tried to influence Maryland state lawmakers with a study that used outdated reserve estimates of gas in the Marcellus shale, over-estimating the recoverable gas in Maryland by a factor of three. If policy makers use information from industry-commissioned, science-for-hire studies, they will make good policy for corporations, but not for US citizens in harms way from industrial gas development.

The industry-friendly NERA consulting group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the

wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by drilling and LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I fail to appreciate just how exporting our natural resources for the enrichment of a few, at the cost of our environment in any way frees us from imported energy sources. Who are we kidding here? We are bearing all the costs and they are reaping the profits, at the price of our future! We should be developing clean, renewable sources of energy for American use. Financial incentives and assistance for home and business solar systems is an excellent direction. This shift needs to get underway NOW. Stop subsidizing the destruction of our country and our children's future.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Angela Hendricks

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports. Personally, it frightens me that this is being done without any concern for the near or late future. I don't have any trust in this system!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kathleen Hewitt

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Wendy DeLuca

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Patricia Ferguson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We all know that natural gas is not the optimal energy source. There are many other sources of energy available to us in this day and age that it's pitiful we're not acting on them soon. The fracking industry is not 'liked' by anyone (average citizen) who knows about it and it's effects on the environment and even us, people.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Charleen Williamson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Ann Britton

No man on this earth created the atmosphere; no mere man has any right to pollute it. No mere human created this awesomely beautiful earth; no mere human has any right to **** it - to strip it of God-given resources essential for healthy sustainability - merely for the short-term gain of insatiably greedy individuals, while plants, animals, and other life forms essential for sustaining human existence long-term - along with people all over the world - increasingly suffer horribly and needlessly. No man created fresh water, without which none of us can live; no mere man has any right to poison it. You have the responsibility to safeguard irreplaceable resources - air, water, and land - on which all future generations - including your own - necessarily depend; how will they look at you and what you did or didn't do to safeguard a livable planet fifty years or a century from now?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Barbara Martindale

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Amber Sabo

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Christine Carollo-Zeuner

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Kelley

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

Christine M. Simony

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

At a dinner party last night, I got a chilling experience when a guest said that fracking was totally safe and that California was perfect for this kind of procedure for gas AND oil. He worked for Chevron.

I'm not totally educated in this but know enough that our water quality would be compromised. Water is life. I am concerned for all of the United States, not just California.

We need better and REAL scientific evidence to back up the environmental impact on the land. We also need testimony from people who have already leased their lands to the natural gas companies and felt the unhealthy effects on their families, livestock, and land. We need politicians who would believe in the REAL facts and not twisted facts to help the 1%.

Money isn't everything. Our environment sustains us.Can we not sustain our environment?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Janis Jang

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Frederick Hamilton

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

IT MAKES NO SENSE AT ALL THAT AMERICA WOULD SELL ANY KIND OF FOSSIL FUEL. IT WILL NOT BE THAT MANY YEARS WHEN WE WILL WANT THAT FUEL TO STAY ALIVE, KEEP WARM, MAKE ELECTRICITY, RUN OUR CARS AND MANY MANY OTHER USES. SO KEEP ALL GAS, OIL, AND COAL HERE. JOBS AND MONEY IS NOT A GOOD EXCHANGE FOR SOMETHING THAT CAN NOT BE REPLACED IN THE FUTURE.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Marilyn Colyer

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Why are you people so ****?This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact

statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lynda Osborne

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Martha Nikas

Department of Energy

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Way back when I was in grade school we were taught that natural gas, oil and coal were non-renewable energy resources and that by the time we were adults we would be using new sources of safe energy. While we have indeed developed a number of alternative, ususally less destructive and often renewable, energy sources, we seem ridiculously reluctant to begin to fully implement them.

It makes no sense to allow a few big, mostly American, corporations to dictate the direction and safety of the entire world's energy future. A handful of unscrupulous corporate ceos, their board members and owners continue to reap vast profits, while the world at large, not only billions of human beings, but countless species of plants and animals, are saddled with all the negative repercussions that result from procuring and using yhese non-renewable energy sources. As if things weren't bad enough now we've added fracking to the equation, along with a research group that is clearly in a position to find results biased in favor of the natural gas industry. It is unacceptable.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Myrna Cohen

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to working Americans and their communities -- projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally: how much does it cost to fuel ships which take 3 weeks to cross the Pacific? Makes no sense.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Deborah Craig

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jamie Damaschke

Department of Energy

Sincerely,

Lew Warden

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The DOE has the responsibility to conduct a newer and more complete environmental and economic assessment of LNG exports to truly determine if it really is to the long-term benefit of the American people and in the public interest. A fuller more recent (less than 2 years old) environmental impact statement for LNG exports must be conducted including 'all' associated impacts to fracking communities and the fresh water table. While this may take several years to complete, as a citizen, I deserve to know what the real costs will be to us when increasing natural gas export overseas as well as the impacts to prices on the unregulated LNG energy markets.

Additionally, rules must be put in place to protect our interests before DOE authorizes or approves any additional applications or future exports (Oil or Gas). If the related actions of the DOE cannot be mitigated to a level of insignificance, then your action should be to error on the side of safety and deny additional applications and limit ALL other applications to yearly approvals to better control the yet unknown effects.

The DOE is suppose to serve the needs of the American people, not exploit them and serve the public interest. Alaska uses commons to export it's natural resources thereby compensating Alaskan citizens. How can the DOE support the exploitation of America by big oil and gas without due compensation? A true cost and benefit analysis must be done before any decision is made which will effect every American citizen and rob us of our natural resources through increased LNG exports. **DO NOT ALLOW THE EXPORTATION OF OUR NATURAL RESOURCES (Natural Gas/Oil) WITHOUT DUE COMPENSATION TO THE AMERICAN PEOPLE.**

These industry-friendly analysis reports mainly concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry, the wealthiest people and large corporations in the world. The report completely ignores problems or unfairly dismisses the real costs to hard-working Americans and their communities -- uncontrolled costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, 'unprojected' costs associated with environmental destruction due to increased fracking, increased health and health-care costs for those affected by polluted air and contaminated groundwater.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ruben Mejia

Department of Energy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

As an environmental scientist and attorney I can unequivocally assert that there is nothing good about fracking. Just as nuclear power plants (NUKES) were a marvelous idea in theory and a disaster in practice, Fracking will result in far more environmental damage than can possibly justify any short term energy gains it might provide. Clearly we can no longer externalize pollution costs onto the environment. Irreversible damage to air, water (especially groundwater) & soils must be taken into account. I am certain that inevitable human errors in design, construction, operations and transport/storage of resultant toxic wastes from fracking activities will inevitably result in so much environmental damage that it will become glaringly apparent that fracking (like NUKES) is so inherently dangerous it should have been banned to prevent the devastation before it occurred. But by then it will be too late. Haven't we learned anything from Fukushima, the BP offshore drilling and countless other debacles? No short term fix justifies the huge longterm negative consequences. At the very least, legal Strict Liability should attach to all aspects (contruction, operation & subsequent transport/disposal storage of toxic waste

byproducts) of all fracking activities. If it's really so safe and the best thing since pancakes & sliced bread, why should that (Strict Liability) be a problem for Fracking advocates?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Weber

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Linda Redding CPA

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group concludes that LNG export is good economics by focusing on all the money that would flow from most taxpayers to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities. These come in the form of: increased costs to heat our homes and businesses; the loss of jobs in industries most affected by LNG exports including domestic manufacturing; and projected costs associated with environmental destruction due to fracking and in healthcare for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to determine the true benefits, if any, to the American public. A full environmental impact statement for LNG exports must be conducted, including what's happened in fracked communities. We

deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Nancy Tierney

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michelle Mackenzie

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

What price can we put on clean, unpolluted water? Many communities are facing unacceptably high levels of methane in their water after fracking has begun. Not to mention the other chemicals used to frack, which are undisclosed until after the drillers are gone. Some of these chemicals are cancerous. The families in these communities cannot afford to move away and therefore are forced to bathe and drink unfiltered water from these polluted wells.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

William Henry

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jim Gayden

Joan Torok

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I can tell you first hand, being a property owner, without mineral rights in northern Michigan, when they came for the natural gas, the company representative's title was Land Aquisition Manager. We the people have no say in the matter. It was made clear to us, you can fight it, but you won't win. The land now supports 2 natural gas wells, underground pipes and pump stations to transport the gas. The lanes have eroded, this once pristene parcel of land is now an 80 acre parcel subject to inspections, the privacy is gone. The results presented in this report are obviously biased. We were told the LNG was needed for local power needs, it's no surprise, if there is more money to be made exporting the product, it would be about the money, and nothing else matters.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

L. Boone

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Joyce Bressler

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The study should also account not only for best practices, but also for actual real-world activities. Since these often include round-the-clock operations by tired front-line workers who may not have adequate training, spills and other mishaps are not uncommon. Additionally, any sensible report should include ALL energy inputs, such as diesel fuel for trucks, etc and should include net effects from all associated pollutant streams, specifically including diesel PM [soot]emissions, and all VOCs from associated traffic and operations.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sam Bell

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Chris Ecker

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kathleen Martin

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rebecca Finley

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Diana Bastron

Robert Gott

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We need to address the real issue of gas pollution. It is time to ban the consumption of cabbage and beans. Humans need to be fitted with devices to catch any escaping gas. This can be liquified and used to heat home in areas that are experienceing extremely cold conditions due to global cooling. Fracking is the answer to our energy needs. Without fracking there will be more use of coal and fuel oil to heat our homes. Fracking has been the only bright spot in our economy and has been the primary reason the US is not in a depression. The Energy department needs to focus on the science and not irrational fears of crazy people.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Donald Duck

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Donna Smith

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kristine Parkins

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eleanor Castle

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Denise Lytle

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Juie Samuels

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Nancy White

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Please listen to the reports of first-hand experience from fracking. When the reports come only from persons who have financial ties to the industry, we cannot expect an unbiased view.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Diane Fernsler

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

As a Soil Scientist who has spent twenty five years working to cleanup contaminated soil and groundwater, I find it appalling that our nation continues to pollute precious potential drinking water sources for our fellow citizens! For years, I have explained to the public that the high costs of clean up were due to our historic lack of understanding of how chemical use impacted our communities. We now know better! So we should act better!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lana Brodziak

Department of Energy

Sincerely,

Dale Patterson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The LNG export community counter to they're wishes does not exist in a vacuum. The desire for profit has consistently poisoned the water supply in communities close to previous fracking operations. To allow them license to increase the scope of such activities cannot be justified in terms of a benefit/cost analysis for the common good. When the scope of context is enlarged beyond the NERA Economic

Consulting study to include the human community and the environment we share with all life then in my opinion the proposal should be encouraged to drown in it's self-serving slop. The Department of Energy must follow your mandate and work in the interests of the all the people of the United States, not the narrow self-interested sponsors of the the NERA study.

Widen the scope consistent with your mandate. The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Brian Nappe

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Wheeler

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Catherine Smith

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

At a time when we should be striving to get and remain energy independent this report favors using our resources, not for our citizens, but as an instrument of profit for multi-national corporations. It would reduce us, at least in the area of energy, to third world status exporting our natural wealth rather than using it as a foundation for developing industries and jobs here.

This does not even begin to account for the long term impact of fracking which is still under debate.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Peter mcMahon

Department of Energy

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

We are quickly approaching a point in which we will have emitted enough carbon to raise global temperatures to the point that all land ice masses will melt 100% during summers. If we don't curb our dependence on fossil fuels immediately billions of people will suffer globally. It is your duty as a citizen of this planet to protect this planet. It is your duty as a member of the DOE to find long lasting sustainable energy sources. Fossil fuels will only further harm our future economy and our health. I implore you to make a decision that will not compromise our future, even if it means a financial sacrifice now.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Maurice Goulding

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs

in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Douglas Cooke

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We can make a change now and influence the ecological soundness of the policies early. We don't have to continue making the same selfish, capitalistic choices with natural gas as we have the petroleum industry. Stop fracking with current small-minded and water-destroying procedures! Create new methods that give us access (and allow possible export options to be considered again) or just stop altogether. Shortsighted business people should not get decision making power in this situation. We stand at a precipice--you can be responsible for throwing the health and beauty of U.S. resources away forever or you can construct safe policies that protect our country's natural resources and allow our country to access those resources intelligently.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact

statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jessica Fanning

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Paulianne Balch-Rancourt

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bernina Perkins

Fracking is injurious to the Planet. Fracked gas is dirty coming out of the ground, dirty being shipped/transported, and dirty being used. T. Boone Pickens notwithstanding, this fuel is bad for our planet and costing untold millions in damage to us and our world. NO to all of these pseudo-experts, who are so obviously being well compensated for their 'views' on natural gas.!!

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The idea of selling off a national energy source which we will need in the future to sustain our own country for the immediate profit of a few is the height of insanity. It is time we behaved more intelligently and thought and planned ahead. There is no escaping our future need for energy sources under our own nation's control. There will be more wars and crises when external energy supplies to us will be restricted. Please, Please, Please! THINK AHEAD!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

the focus needs to be put onto public financed research into these exports and there subsystems. Current ways on doing these evaluations is skewed, and is not accurate.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ryan Lamberti

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Matt Wright

We in Garrettsville Ohio have 8 injection wells and several fracking wells. The effects of this are popping up by these wells and causing drinking water to contain a methane level so high, YOU CAN SET THE WATER ON FIRE while it comes out of the faucet. This was reported on the local news!! How can injecting radioactive waste into the ground, regardless of how deep, not effect anyone or anything??? We are fined for pouring motor oil or paint into the ground????

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. MARY BURGESS.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Burgess

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Florence Morris

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Janice Metzger

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jerome Alicki

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Radha Korman

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sylvia Shaw

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Explaining the scientific information available that is consistent with facts rather than political or economic speculation will help us all to comprehend what is real versus what is fancied. SIU in Illinois recently published articles about 'fracking' concluding that not enough is known about the full process, its true ramifications as well as actual benefits. Apparently this story, like most, is far more complicated than projected. We are owed the truth. Please do that.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Robert Dickerson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Brendan Fisher

Department of Energy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

NERA is an industry-friendly group. Its conclusion that LNG export is good economics focused only on money that would flow out of consumers' pockets and go to the natural gas industry and the wealthiest people in our country.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports. A full environmental impact statement for LNG exports must be conducted, including impacts in fracked communities.

American citizens deserve to know the real costs to us when sending natural gas overseas.

Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Martha Kirby

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Let me see if I understand this: I live near the proposed LNG import - no, make that export - terminals in the countryside already pocked with gas wells, rusting tanks, pipe lines and abandoned water wells and drive on crumbling roads taken over by oil field trucks 24/7. After several years of drought, I am supposed to think pumping more water from our shrinking aquifers to frack gas wells is a good idea? So that we can EXPORT this nonrenewable natural resource and make the cost of energy in the U.S. more expensive? It seems to me that we are rushing to become just like one of those third world countries exploited by Big Oil in the past! Where were we going to import LNG from a few years ago? Oh yeah, Nigeria. What are we thinking!?!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Steve Sheehy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Damage done to the environment by the hydrofracking process is irreversible. Why are we considering trading water for gas; adding carcinogens and radioactivity to air, water, and food? Have we lost our minds? Does the power of gas corporations really trump all common sense? There is nothing positive about extracting gas using this method. Please listen to our scientist/doctors who are vehemently opposed to going forward with this, as THEY RECOGNIZE the dire consequences!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jared Cornelia

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

No fracking until safer! GLOBAL WARMING SHOULD BE TOP PRIORITY!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Alice Chew

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Mark Johnson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

A recommendation from an industry group does not place the environment in its rightful place and instead conclude that LNG export is good economics. Everyone knows that! By focusing on all the money that would go to the natural gas industry and those who invest in the industry, you are ignoring the environment and your sacred duty. The report unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Thank you for putting America's environment legacy front and center on this federal land. Money is spent, lost and disappears but we must leave an intact environment for generations to come.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Craig Michler

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Steven Christenson

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Heidi Heimerl

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Susan Raphael

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

----- I live in an area in South Texas that has become a victim of fracking . Our once beautiful fields of oak trees, mesquite trees, wilflowers, especially blubonnets, have been ***** by the Ford Shale company. Our highways and rural roads are being torn up by the huge trucks which are involved in the fracking business. The promise of more money has caused the majority of the people to ignore the damage being done here. Thankfully, I have many photos of the Texas countryside before this invasion took place. At least I will be able to show my great-grandchildren what it used to look like. My grandchildren, thankfully, already know.

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

E Unger

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

E Unger

This administrations focus has been about supporting low and middle income Americans. This study and actions stemming from its results don't support the average American-it supports the richest among us. I don't believe that this is what our focus as a country is and I hope the department of energy will make a choice not to bow to big corporations and conduct a study that supports regular Americans.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rodger Browder

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Why in the world would we be selling Americans short with dirty air, contaminated water, slashed real estate prices just so a few can profit? Where is the justice in that?!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carol Bentley-Iverson

It seems to me that the energy companies, who expect to reap enormous profits from the sale of natural gas, ought to be required to find a method of extraction that does not so greatly damage the environment we all live in. The gas itself is a great improvement over oil and coal but, like the rest of us, they should be required to protect the rights and the health of the rest of us..

Thank you.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs

associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rodney Boyd

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eve Eskew

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I realize that you get a lot of 'form' letters, but my feelings on this subject of 'fracking' are very strong. I am patently tired of people interested in lining their own pockets with money being in positions of evaluating my children's future. I also feel sorry for their children, all the money in the world will not save them from the results of their father's greed.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Leonard Cage

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and some of the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. We need

know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jennifer Westberg

Department of Energy

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Mathews

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Although some of the environmental damage from fracking is anecdotal, there is no question that significant amounts of methane are being directly released into the atmosphere, that millions of gallons of potable water are rendered unusable and that there is significant risk to aquifers from poorly regulated independent operations.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Heasley

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I was born and raised in the Finger Lakes area of New York and am a property owner on Seneca Lake.....the heart of the proposed fracking push in NY. The whole idea that this program is being sold as a road to 'energy independence' when it is actually a 'road to riches' for the fuel industry is the height of arrogance. I am especially interested to know why the watersheds of New York City and the Syracuse area are set to be isolated from fracking while the rest of the state will be subject to paying the TRUE cost of this energy!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carole Feray

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. To me, it isn't even about the exporting. It is about two things: the impact on our home (the earth!) and the impact on the people in close proximity to the fracking site. Just the name says it all to me - FRACKING = FRACTURING.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Joy Bellamy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

William Brookover

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water. What's up with that? People are just invisible, or we don't count for some reason?

The DOE, as you must know, has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. You know, 'We the People.' A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Doug Westendorp

Department of Energy

Dear Energy,

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Let's stop subsidizing petroleum and other forms of dirty energy and keep pumping money into clean energy: solar, wind, fuel cell, biomass, landfill gas, hydro, and wave energy. All of these alternatives can become useful in the LONG TERM. Short term solutions are never good for anyone, it's a false sense of hope. Stop hurting the environment and the majority of the people! The only people who benefit are the natural gas companies!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

C Tully

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The fracking process is contributing to Climate Change at an alarming rate. Some states like my state of Ohio has laws in place that make it near impossible for any regulation on where toxic wells are established and what can be put in them. Ohio is in effect becoming a toxic waste dumping ground and this is unacceptable. We must have EPA regulations to control what goes in the ground in these wells and also regulations that force companies to release information on the chemicals they are using during the fracking process and what this toxic water contains.

I worked with Beneze in the military and understand how toxic this chemical is. Allowing this chemical to be transported by water or vehicle should be a tightly controlled and restricted process. Injecting this chemical back into the ground is a disaster waiting to happen, and that does not take into account the other toxic chemicals contained in the toxic waste created from fracking.

We must learn from our mistakes. In the past we freely dumped chemicals on the ground and have seen health issues that have devastated families and communities ever since. We have also had to spend billions in tax payer dollars to clean up our mistakes. Let's not make the same mistake again. Let's get a handle on the fracking process in all states and make sure this process is as safe as we can possibly make it for our communities and for our environment.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jesse & David Krempasky

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Daren Johnson

Sincerely,

Clark Hiestand

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Burt Kopito

Department of Energy

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bob and Carolyn P

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Thomas Daly

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

James Wright

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

I suggest that DOE collaborate with the EPA to complete a thorough environmental impact of hydro-fracking on our farming communities, starting with the report by Oswald and Bamberger from Cornell that links waste by products to animal deaths and reproductive issues.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Christopher Comparetta, MS

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only manages to conclude that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete, unbiased environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities and in the communities along the pipelines that take the gas to the export facilities. We deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules to protect our interests must be put in place BEFORE DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Diana & Charles Bain

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Peggy Keller

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

As a Civil Engineer, I have serious concerns about the current policies regarding hydraulic fracking, including the exemption of fracking from regulation under the Safe Drinking Water Act. The American Society of Civil Engineers (ASCE) has released a policy statement on the subject which reads:

'ASCE strongly recommends that current regulations be reviewed, revised or enhanced, as needed, to:

Mandate full public disclosure of all chemicals and other propping agents in the fracturing fluid. Control the handling, use, and disposal of chemicals in the hydraulic fracturing process. Establish well construction and decommissioning standards to protect underground sources of drinking water and to prevent methane loss. Establish site closure and restoration standards. Reduce the freshwater footprint for each fracturing operation by reuse of the flowback fluid. Assure the safe treatment and disposal of used fracturing fluids, flowback fluid and producer well waters. Ensure adequate controls over stormwater runoff or overflow from the well site. Ensure that there is no surface infiltration of waste

and production fluids into near-surface aquifers and recharge zones. Promote research on hydraulic fracturing, including the effects of multiple drilling operations in a single watershed.

Protect in-stream water flows and determine the cumulative impact of multiple drilling operations within a single groundwater basin or watershed.'

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Shelley Bance

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Stop, look, and listen. Do not pass GO. Lessons for children, learned by children, and then frequently forgotten by adults as we learn the fine arts of compromise, balancing issues, getting along - all fine skills, but frequently obstacles to recognizing our moral compasses and the need to take a stand. As a former federal executive, I am aware of many of the challenges government leaders can face; I am also aware of the commitment we have to public service and leadership. Take a stand; do what is right for the future, for the unknowns of the science at this point; remember there are corporate interests lurking behind so many reports.

Sean Gilpin

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gary Peterson

Department of Energy

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jennifer Scott

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Donna Mackinnon

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ben Phipps

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Do we care about our grandchildren's world? This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Cletus Stein

Department of Energy

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Laurie Figary

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

With personal friends living near a fracking site - I've heard them tell nightmarish stories for years about the results on their drinking water that process has created. There is no way to justify poisoning the environment and the people who live in it in order to release more carbon based fuel into the environment.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Robyn Cleaves

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Shuman

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

It is critical to consider a much broader analysis of costs than what this report included. In such appraisals it is time we stopped ignoring the significant costs associated with the resulting environmental disruption and increased pollution.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

James Owen

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Proof is multitudinous on the dangerous and negative results of fracking in areas that have been ***** by this process. The jobs are fleeting. The towns lose a lot of money fixing roads and with extra social services costs. Water supplies are forever tainted. Cows die. Crops fail. Where is your loyalty? To corporations or to the American People you were formed to protect?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

There is ample evidence at this time that the extraction of liquefied natural gas is seriously harming communities and water tables--forever!--and simply is not a viable process for acquiring further fuel resources, for Americans nor for lucrative sales to other countries !

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports and to reveal the serious dangers to the American public and the heritage of American lands. A full environmental impact statement for LNG exports must be conducted, exposing the impacts in fracked communities. American citizens need to know what the real costs will be to us from the fracking process and from the 'economics' of sending natural gas overseas. Rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sarah Shelton

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Personally, I have friends whose lives have been dramatically changed by fracking in their area of East Texas. The county roads have been torn up by big trucks; there is machinery that operates, 24-hours a day, 7-days a week, causing noise and sleepless nights for the people near the compressor stations; earthquakes have occurred, where there have been no earthquakes before; rich farmland and timberland have been devastated by the drilling; without regard to public health and safety, the gas companies have located their wells close to houses and children's play areas. Come to East Texas and live the inconvenience and environmental degradation, if you have trouble envisioning the scenario I am describing.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Barbara Methvin

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

A team of impartial geologists and environmental medicine specialists should investigate and report on the long-term impacts of fracking in terms of destroying our bedrock and groundwater, producing carcinogens, and increased industrialization instead of scientists linked to fossil fuel industry. Either we are going to take care of this planet or we are all going to burn in hell eventually.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tim Faulkner

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

All of the adverse effects and costs of LNG extraction, processing, transportation, export, and pollution associated with the industry must be considered for the environment and for all the people affected, and not just the financial benefits for those who have money to invest in the industry. All the economic effects, long term as well as short term, need to be considered before fracking operations are expanded. Careful and accurate studies must be done to determine the problems that exist with current fracking operations. Those fracking operations, and associated industrial practices, which harm the environment, damage property or the value of property, or adversely affect the health or livelihoods of our population should be stopped and completely rectified. If the problems cannot be properly rectified, the practices that cause them should be banned permanently.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tom Howell

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dr. Charlie Beil

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs

in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

salvatore cento

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

CHARLOTTE COOK

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mark Gillono

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Louise Vogel

The short term benefit of cheap NG is far out weighed by the long term threat of Fracking. In fact the false economy of cheap NG is really a threat in itself because it makes Renewables unattractive. It gives people a false sense of security and Climate Change continues to accelerate. Put the real cost of NG in the price of NG.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Linda Margo

Lisa Aragona

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Fracking has dire consequences. Please conduct a COMPLETE environmental and economic assessment of this process. People living in the communities where fracking takes place will have higher healthcare costs resulting from the polluted air and water that will result from this process.

No one wants their tap water to ignite - which has already happened in communities where fracking has been done. People need to have the full story of the hazards of fracking.

PLEASE proceed with caution before authorizing any exports of LNG.

The lives of people are more important than money.

Thank you.

Peg Butner

It's time to go back to the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Blain & Peg Butner

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

TJ King

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Palughi

Why are we considering exports when the effects on our people and environment have not been truly investigated? What effects, over the long term, will this practice of injecting unknown chemicals into the ground have on our water supply? WE HAVE NOT STUDIED OR RESEARCHED THE EFFECTS OVER ALONG PERIOD OF TIME! THIS MUST BE THE FIRST PRIORITY OVER ANY FINANCIAL GAIN!

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Deborah Broderick

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Also our wildlife will be affected by this. Americans need to learn to conserve instead of buying Hummers, sitting in drive thru lanes and seating in their cars letting their cars run.

We need to take care of this world in which we live, we should be leaving it better than the way we found it.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dawn Cois

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ralph Bocchefft

Department of Energy

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tricia Lyn Clemons

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Charles Banks

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Your so called study of the effects of fracked natural gas is bogus to say the least. You've hired so called experts who all have strong ties to the fossil fuel industry. What is needed is a comprehensive study by impartial experts like geologists and other scientists with no ties to the fossil fuel industry. Then we can get the unbiased truth about the 'real' costs and dangers of this practice, and if they outweigh the benefits.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ben Gaffin

Department of Energy

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Warder

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Peggy Breidenbach

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Jason Younk

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

At a time when the world needs to be reducing its use of fossil fuels, in order to prevent a climate catastrophe, we have no business even considering exporting liquified natural gas from fracking. As bad as fracking is, since the leaked methane from natural gas wells is four times more potent as a greenhouse gas as carbon dioxide, it does even more harm when it is liquified for export, because of the tremendous amount of energy required for liquification.

It does not matter how much money there is to be made from exporting natural gas because the cost of climate change will exceed it many fold, once we factor in recovery from natural disasters, including the impact of drought and floods on agriculture. Attempting to profit from natural gas is a fool's enterprise.

Our future depends on finding alternatives to all fossil fuels, not just for ourselves, but for the rest of the world, for climate change respects no international boundaries. Exporting natural gas is like exporting our addictions.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Erica Hulstrom

Department of Energy

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bob Fischella

Department of Energy

Dear Energy,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs

associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities.
