Subject: 2012 LNG Export Study

To: Rep. Henry Waxman and all other representatives of America,

I have no doubt that there will be sufficient documentation to persuade many in our government of the necessity of exporting LNG products worldwide.

However.

The case made to the American people has been that we need to be self sufficient and to not be dependent on foreign energy imports.

Therefore:

- 1.) Exporting energy outside of North American may be in the best short term, 50 year, interests of the exporters, drillers and transporters but will defeat our need to be energy self sufficient.
- 2.) The resultant ground water pollution will require the massive import of fresh water from Canada thereby again benefiting the im/exporters, drillers and transporters.
- 3.) Therefore, the economic viability of exporting LNG precludes the interests of the people of America. We will loose access to energy independence and gain dependence on water imports which will impoverish us collectively.

Please do not allow our future to be squandered by profiteers and carpetbaggers.

Thank You for your attention in advance,

George G. Fawcett
