U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Siegfried
5339 Broadway
Oakland, CA 94618

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeffrey Urbauer
The University Of Georgia
Athens, GA 30602

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Kneeder

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jason Davis

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Raul Rodriguez

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diana Moll
518 S. Branciforte Ave.
Santa Cruz, CA 95062

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I already know that new fracking in Colorado has ruined ground water and people now have to truck in water to their homes for use. Is that what we want? Destroy the water of our own country just so we can make a few bucks? NO on fracking and exporting gas that is gotten by tracking. The chemicals used for the process destroys fresh water. How can we replace fresh water?

RE: 2012 LNG Export Study

To Whom it May Concern:

The only excuse promoted for accepting the costs and dangers of fracking is "to make us less dependent on foreign oil." Exporting fracked gas will not do anything to reduce such dependence. Its sole purpose is to increase the profits of the most profitable industry on earth. It is long past time to put the needs of citizens ahead of the profits of massive corporations. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

The use of any fossil fuel is bad enough and we need to transition away from this inefficient and pollution intensive source of energy production. The idea of EXPORTING any fossil fuel should be discarded. I thought we were looking for "full and complete energy self-sufficiency" in the future. So, well be exporting certain fossil fuels and importing others?! This can only be good for the oil/gas producing companies and make no mistake: these entities do NOT care about public opinion let alone the environment. Additionally, fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas and any/all fossil fuel exports.

WAIT A MINUTE! The Oil & Gas Industry has been lobbying HARD for increasing and NOT regulating Fracking so that the USA can become ENERGY INDEPENDENT...AND NOT HAVE TO DEPEND ON FOREIGN COUNTRIES FOR OUR OIL SUPPLY.....AND NOW THEY WANT TO EXPORT FRACKED GAS??????? WAIT A MINUTE...IF WE FIND IT HERE IT HAS TO STAY HERE. OR ELSE FRACKING STOPS NOW....RIGHT NOW...FRACKING IS DANGEROUS, UNREGULATED AND A THREAT TO OUR OWN GROUND WATER PURITY. SO LET'S LEAVE THE PORTS OPEN TO IMPORT CLEAN WATER..... Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jane Gates

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nick Dwyer

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Evelyn Pence
639 Monroe St
Newport, KY 41071

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Dozens of totally disgusting chemicals have been found in the local water supplies nearby fracking operations. Fracked gas itself is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. Exporting fracked gas - which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it - produces 20%-30% more CO₂ than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to return to the use of coal-fired power plants which are FINALLY beginning to be phased out largely due to the low price of natural gas. Bottom line: No matter how you do the math, a world that runs on natural gas is a world wracked by climate chaos and extreme weather such as deadly superstorms, wildfires, droughts, and floods. We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty energy for years to come. Green-lighting fracked gas export terminals would have a disproportionate impact on communities near fracking operations as well. People living near fracking operations cope with terrifying local impacts: contaminated—even flammable—drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions.⁶ Some residents have even found fracking chemicals and heavy metals in their blood. In short, the human toll taken by fracking is already far too high. Giving the fracking industry an incentive to expand its operations by allowing it to export fracked gas overseas is nothing short of irresponsible. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dan Cappello

RE: 2012 LNG Export Study

To Whom it May Concern:

You've seen the destruction to the mountains by the coal miners. For them it is too late. Fracking is destructive the dangers have been proven. How long will it continue? And to private homesteads powerless to stop it. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christina Krauz

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Miriam Eckardt

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Charlie Otto

Stand up to the fossil fuel industry and deny all applications to export natural gas. AND stop the development of ALL fossil fuel here in the U.S. There are other ways to live! There are too many fat people in this country costing everyone lots of money. Moving to eliminate fossil fuel would also eliminate the problem of obesity. It would be a transfer of fuel needs from fossil to fat. Do it and help save this world from further destruction before it is too late! PLEASE have the courage to stand up to fossil fuel!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Warren salyer

RE: 2012 LNG Export Study

To Whom it May Concern:

It is very important to keep fracked natural gas here in the USA and to NOT export it! There are many reasons, among them: 1. Extracting natural gas via fracking is one of the most polluting energy extraction methods. Thousands of diesel truck trips, cancer-causing chemicals released into the air, methane bubbling up into drinking water supplies, and untold/unknown dangers to cracking the bedrock apart. 2. Americans are used to enjoying imported oil - and leaving the environmental consequences of drilling in foreign lands in someone else's backyard. Well, now Americans have to come to terms with degrading our own environment to have natural gas. It is horrible to see, hear, smell, and suffer the local environmental degradation with fracking literally in our own backyards. I will not tolerate watching the American environment be degraded for exports! Those exports only benefit the oil & gas industry; in fact, we'd suffer the environmental degradation, increase in cancer and asthma rates while watching our natural gas prices actually RISE since we won't have that gas to use for ourselves. 3. Expansion of fracking in the US will release more methane into the atmosphere due to leaks in gas wells, pipelines, and other infrastructure. Research suggests that fracking may be as bad or even worse for the environment than coal! 4. Exporting fracked gas requires a carbon-intensive process of cooling it to -260 degrees Fahrenheit to ship it a process that produces 20%-30% more CO2 than burning gas in the U.S.! 5. Heaven help those Americans that would live near the proposed export terminals! They would suffer the highest health risks of all. President Obama, PLEASE move away from fossil fuel and not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. PLEASE move toward clean, renewable sources of energy – for the sake of your family and mine.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a horrible idea anyway, but to exploit and endanger our own resources to supply fossil fuels for other countries is reprehensible. Please direct your focus towards finding CLEAN energy for our own country, and towards finding out what exactly the toxic brew is that they inject so freely into our groundwater. I'm tired of the oil companies being able to rule our government. Stand up for us! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Holiday Sloan
1446 Boyer Ave

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please make the kinds of decisions we hired you to make when it concerns environmental issues!!!

Sincerely,

Michael Lorden

Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in a very small town in the midwest and until all concerns about water contamination, etc. are complete this is just too much for those of us in a place that depends, in many cases, on spring or well water. Our history of messing with the environment, e.g., the Everglades, rerouting rivers, planting non-native plants because "science" says it will work is abysmal and this is coming from a scientist.

RE: 2012 LNG Export Study

To Whom it May Concern:

High volume slick-water hydraulic fracturing is a dangerous technology that poisons people, harms the environment, and contributes to global warming. Permitting the export of gas would dramatically increase the magnitude of fracking in the United States, thereby increasing the exposure of Americans to chemicals that cause cancer, birth defects, and miscarages. Exportation would also increase the price of gas in this country for both residents and business. The executives of multinational corporations may profit from such an arrangement, but America will be hurt in the long-run. Your leadership is needed to develop a sustainable energy strategy fo the 21st century that does not continue to depend on fossil fuels. Please stand up to the fossil fuel industry and deny applications for the export of natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ayesha Mehren
1196 W 8th Ave
Eugene, OR 97402

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is a no-brainer. The hazards to health have been shown time and time again. I guess until someone starts bottling the ground water from 'fracking' locations and selling it to the people that are responsible for this activity, things won't change. Life is precious...only to GOD!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Simonds
18062 Highway 67
Ramona, CA 92065

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. it is indisputable that we'll have less need for fossil fuels in the future, as our infrastructure including cars will probably be running on hydrogen technology. in the meantime do we really want to be despoiling the environment and our heritage to the young for short term profits. the u.s. must begin to pay the real price for a gallon of gas. u.s. consumers need to curtail recreational motoring and begin to buy electric vehicles

Sincerely,

Bill Korosec

RE: 2012 LNG Export Study

To Whom it May Concern:

We are only beginning to see reports of health and livestock hazards that have been caused by fracking. This technology may produce usable gas, but it is also a huge risk to public health, public lands, and agriculture. Please do not expand the market for the gas produced by this technology. We would be much better off investing in sustainable strategies for energy collection and storage. Fracking has been shown up as a potential threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynda Wilson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Take a trip to China, Beizhing without your masks and check out what pollution does. Fracking does that to the water and soil supply. Take some deep breaths every few seconds for a few weeks. Eat some street food exposed to that. KNow there is no escape unless you do something. Happy grandchild cancer !

Sincerely,

Paula Lynn

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Julie Lyons
8656 Golden Sage Dr
Elk Grove, CA 95624

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alice vrankovic

RE: 2012 LNG Export Study

To Whom it May Concern:

The US cannot afford to trade its precious water and clean air for exporting natural gas which has been fracked out of the ground. The Rocky Mountains are especially hard hit with the oil and gas industry trying to buy leases in some of the most pristine areas left in our country. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. STOP the FRACKING FRENZY! Please President Obama!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Constance Goldberg

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sandra Lucore
131 South Side Road

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jim Wright

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is horrible for everyone. Horrible for the communities in which it occurs. Horrible in the amount of energy that is required to even make extracting and transporting the natural gas yielded. Horrible for the environment by contaminating ground water, causing seismic reverberations, and releasing methane into the atmosphere. I'm all for the US becoming energy-independent and becoming an export economy, but this is the worst possible choice for our country.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a proven danger to underground water resources, and may well have other long-term damaging effects on the environment that will not yet well understood. Pharmaceutical manufacturers have to demonstrate that drugs do no harm before they're allowed to market them to the public. The same standard should be applied to processes like fracking. Allowing it for the sake of exporting natural gas is clearly case of putting profits for fossil fuel corporations ahead of public safety and well-being.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is bad enough – exporting the gas is beyond belief! We should be doing a mass campaign to get citizens to cut back on all of the things, small and large, which contribute to the mess we're in. People don't think that we're responsible, individually. Well, we are! Lights on all over the house, vehicles idling, leaving fridge/freezer doors open,... We're the drops of water that make up the ocean! It's time!!

RE: 2012 LNG Export Study

To Whom it May Concern:

No! Mr. President. Wanting to win the presidency in 2008, you said your win would be the time that people would look back on and say "...this was the moment when the rise of the oceans began to slow, and our planet began to heal..." People will not be saying that if you go ahead and approve 16 pending permits to ship natural gas overseas. Fracking is a toxic threat. Allowing fracked gas exports would give the fossil fuel industry access to huge foreign markets, which in turn would dramatically increase the unconventional extraction of gas (fracking) throughout the United States. Our country's resources—land, air, water, and public health—are being destroyed by this process. Your decision to allow increased exports will speed that destruction of America. And here is how your decisions will affect America and the whole world: if you allow increased use of gas, you will continue to cause climate change. It is so important to understand that gas is just as dirty as coal. Gas burns cleaner, but, when the all the life cycle costs of this type of extraction are counted, fracked gas is as great a climate changer as coal. Mr President, nothing less than the health of the planet is at stake. Be the leader you dreamed of being, the leader you promised us you would be, and do not approve increased exportation of natural gas. Thank you.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Miller

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking was being sold to the American public as a way to make us energy independent or at least reduce our foreign dependencies. Predictably, the bate-and-switch game has begun. Why do we continue to make decisions in favor of people who are greed-driven? I'm still waiting for this administration to do the right thing on a single issue involving the fossil fuels corporations. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patrice Lenzi

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Hydraulic fracking is an unwarranted assault on the aquifers in the fracking areas – and areas adjacent to the "fracked" areas. Water is life! It makes no sense to me to risk the lives of those whose properties are involved. I do know and appreciate the controversies surrounding this practice, its socio-economic-environmental impacts. I urge you to forever BAN hydraulic fracking.

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO₂ than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices which will hurt U.S. manufacturers and U.S. consumers. Increased domestic prices will also give utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and thereby increase U.S. carbon emissions overall.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It seems to me that if this country is bare the environmental threats that fracking poses, then the gas that is recovered from the process ought to be consumed in this country. The American taxpayer will ultimately be called on to shoulder the cost to clean up the messes left behind once the wells play out. The president is far too concerned about the vile crimes committed by psychopaths with assault weapons when the effects on the environment of "dirty" energy practices and a warming environment pose far greater threats to the American people.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Darrell Davisson

RE: 2012 LNG Export Study

To Whom it May Concern:

I have been to meetings of concerned citizens locally here in southern Illinois and I now know that this is a horrible process which will ruin the water in our communities if we do not do something about it. There are not all the jobs that the oil industry touts! Many local towns have put a moratorium on this, while others have let money talk. I even fear that processes like this will have a great deal to do with climate change. Considering this years horrible storms, could you Please please Stand up to the fossil fuel industry and deny all applications to export natural gas!

Sincerely,

Louann Elwell
203 E Ash St
Cobden, IL 62920

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jesse Barnett

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I am concerned about the effects of fracking on a local scale in my community, but also about the leakage of methane during fracking and methane's potent greenhouse effect. Exporting fracked gas both threatens our health locally and threatens our energy independence. We need to restrict fracking and focus HARD on renewable energy technologies.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ashley Slupski
3507 West Sunnyside Avenue
Chicago, IL 60625

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic terroristic threat to American's health, property values, communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Other countries like Germany and even Cuba are way ahead of us in weaning off fossil fuels and moving towards renewables. the whole fracking game is totally based on greed and must only be used as a last resort for the usa. The whole industry is sloppily regulated and too many people are being used and poisoned in the name of greed. signed, rosemary ranck hotchkiss co(where we are currently fighting fracking in my back yard)

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gay Lam

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Brigham
37 Beaver St.
Keene, NH 03431

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Hughes

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Timothy Hissam

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Our land and future generations will not profit from the temporary profits gained by few.

Sincerely,

Susan Neri

Stand up to the fossil fuel industry and deny all applications to export natural gas. Only 1% of the Earth's water is potable!! Fracking is destroying water and the health of our people. We only live for the moment, we MUST consider long term health of our environment, which supports all life... it is insane to rape the earth and destroy the water for the sake of greed!!! Say no to more fracking and sending that product out of the nation, so make a few more rich men richer... it is just insane!!!! Think about the health and well being of our people for once!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Hannah Speregen
1311 Prospect Ave.
Brooklyn, NY 11218

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. However, the environmental cost of liquifying the gas and the damage to communities where it is being extracted needs to be closely examined. I urge you to not rubber stamp the request to build 19 export facilities.

Sincerely,

Rudolf Urban

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rosa S
210 Holy Cross Street
El Paso, TX 79928

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Heidi Baird
542 Dillard Rd
Roanoke, VA 24014

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Before you decide to impose this horrific form of mining on communities visit the wasteland left behind by fracking. Giant, black ponds of poisonous muck, destroyed rivers filled with salt and chemicals, high cancer rates from benzine and radioactivity released from the fracturing of the coal seams, greatly elevated methane rates at the drill sites and high levels of noise at the drill sites. Why not set up huge solar installations and export that like the Germans are doing in Africa.

Sincerely,

Karen wagner

RE: 2012 LNG Export Study

To Whom it May Concern:

The EPA had evidence that drilling by Range Resources caused Steve Lipsky's water to be contaminated with methane but dropped it's action when the company threatened not to cooperate with a national study on fracking, the AP reports. Fracking is a toxic threat to American communities and the climate. The EPA had evidence to this threat, yet rescinded it's order under pressure from the oil and gas industry. This agency has shown itself as incompetent and that fracking cannot be safely regulated. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Mathias

RE: 2012 LNG Export Study

To Whom it May Concern:

Is this the investment in clean energy you promised to invest in when you were asking for our donations so you could get elected and then re-elected? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We supported you. Now you support clean energy and say "No" to the dangers of our current sick energy sources, just as you promised. Thanks for keeping our economy from completely tanking during your first term. Good luck to you and us during this term. These are precarious financial times at my house, just so you know.

Sincerely,

Lisa McLain

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Miller

RE: 2012 LNG Export Study

To Whom it May Concern:

Who in their right mind would think that there will be no consequences from pulverizing the bedrock that we literally live on? There is a geologic reason why there is solid rock between the land we stand on and the molten land in the middle of the planet. Turning the bedrock into bed-pebbles is an Insanely Bad Idea!! Please do not support fracking in any measure!!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kirby H

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Madalyn Dixon

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rebecca Vincent
556 Waianuenue Ave

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Sincerely, Maria Adelizzi 50 S 16th St Philadelphia PA 19102

RE: 2012 LNG Export Study

To Whom it May Concern:

Please tie the authorization of gas export terminals to increased monitoring and regulation of water and air and noise pollution at all natural gas field facilities. Natural gas has the potential to offset the catastrophic effects of coal production and burning on the environment. But it will be at the tremendous cost of the nation's communities living over the shale bed reserves that the industry is exploiting. I live in Susquehanna County Pennsylvania, where the gas industry is just poised for higher market prices to drill the life out of our rural land. Hydro-fracturing wells, gathering and transmission pipelines and compressor stations have proliferated in our county since 2008 underwritten by Pennsylvania's laissez-faire treatment of the gas industry. Water wells have been poisoned, streams and lakes polluted and residents have become ill when drinking and bathing in pthout federal oversight every year in our area since EPA regulations are far more comprehensive than those of the PA DEP.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Heather Kryczka

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chelsea Dupuis

Stand up to the fossil fuel industry and deny all applications to export natural gas. Dear President Obama, What is good for our environment and our children and our children's children is not FRACKING! AS AN EDUCATED MAN, YOU INTELLIGENTLY KNOW WHAT IS BEST FOR THE EARTH. PLEASE IF YOU CAN LET THE KOCH BROTHERS, AND MONSTANTO CORP AND ALL THE SUPER CORPS AND ESPECIALLY THE OIL SUPER CORPS KNOW IF THEY CAN ALL MEET AND INTELLIGENTLY AND RATIONALLY DISCUSS WHAT IS GOOD FOR ALL LIFE ON THE PLANET, FOR THEY HAVE THE POWER TO CHANGE ALL THE NEGATIVE EVENTS ON PLANET EARTH AND HELP BECOME ROBIN HOOD HEROES, TO CHANGE THE VERY NEGATIVE PROBLEMS, ESPECIALLY THE HOLE IN THE OZONE AND MANY MORE NEGATIVE INCIDENTS AS THE OZONE, INTO A POSITIVE AND HOPEFULLY THE EARTH CAN BEGIN TO HEAL AND THE SUPER CORPS WILL REALIZE THAT LIFE IS MORE THAN POWER, MONEY, AND SEX AND POLITICS. FOR WE HAVE THE MOST BEAUTIFUL ENVIRONMENT ON EARTH AND ALL OF LIFE CAN TEACH US AND IS SPECIAL AND WORTH MORE THAN NEGATIVE GREED. THANK YOU, LOVE, SHARON ROSE GOLDBERG MERCADO

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ronald Attrell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jose de las cagigas

RE: 2012 LNG Export Study

To Whom it May Concern:

This practice of fracking is still too new to give free rein to. I am concerned that we are unleashing a new wave of environmental damage that has not yet been fully understood. I believe we need more studies of this practice before it becomes widespread. I am no scientist and it may be safe but I am not as yet convinced. I hope before you give the green light, that you are. The naysayers of climate change are just now admitting that their industry might be to blame because they have found a new way to profit. Should we really be risking this country's future for the profits of a few and not even benefiting (if there are any benefits) from the use here at home? When will we stop being enslaved to one industry and start to invest in our environmental future? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas byrd

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Randall Oakley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carolyn Pavlovich
530 Oak Terrace
Slinger, WI 53086

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas is an enslavement of the health of the American people and the land. We are not a 'wasteland' for energy extraction. Do not export fracked gas. If you do, you are selling out our future to the gas industry, and leaving us with toxic watersheds. Naturally, I object to this. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lloyd McIvor

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Poisoning our ground water, killing wildlife, and causing human illness and death has already occurred in Arkansas. Please make a complete examination of where fracking has already spoiled our natural resources of water, environment, wildlife, as well as beloved pets, and families who trusted the gas fracking industry. Please nip this in the bud. The fracking industry wouldn't even tell the sick what chemicals they use that were mixing with the water, so the doctors didn't know how to help the affected people or pets. It's so wrong on so many levels. Thank you Mr. President. If anybody will care, I know you will. God bless you and yours always.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking has NOT been shown to be safe to the water table where it's done. We should not allow pollution of our most precious resource – water– until we have evaluated its health costs. We cannot undo damage to our aquifers after the fact. The gas industry is charging blindly ahead in an attempt to establish "facts on the ground" which will be politically nearly impossible to reverse. Please do not allow exporting of natural gas obtained by fracking until the public health has been safeguarded. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda trueblood

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Begona Amador

RE: 2012 LNG Export Study

To Whom it May Concern:

There's not a day that goes by without someone decrying our dependence on foreign energy resources. Yet somehow all of that is forgotten when some energy corporation decides that the American public hasn't been fleeced enough, so it's time to expand those revenue producers to other countries. If we must produce more natural gas, why is no consideration given to America's energy independence? Cars can use natural gas with retrofitting. Homes and water can be heated with it., bringing down costs and making this country less dependent on foreign oil. But it's not about America: it's all about the money. When will someone finally take a stand for America instead of trans-national corporations for a change?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Scott Webster

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patricia Burke
2707 Blue Water Dr.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a DISASTER, as it causes earthquakes and destroys water supplies. (Water actually burns due to the gas that is in it.) It ruins well water and most folks who are on well water are on it because they do not have access to municipal water supplies. So they are "trapped". It's bad for people and bad for the environment.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paula cordes

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Crista Tubb

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Invest in Renewables! Push renewables for jobs and our Planet's future! Please! Now, for your children and mine! Don't steal their future! Sincerely, Jon Nyborg

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This past November I voted in longmont colorado to ban the practice of fracking locally.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking poses a possible toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and stand for the American people who elected you. Deny all applications to export natural gas. Exporting a precious resource that we may need in the future as we ween ourselves off of oil is short sighted and undermines our national interests. We should slow the fracking process down until we fully understand its implications, and save our natural resources for domestic use.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Doug Allen

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it produces 20%-30% more CO₂ than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants which are beginning to be phased out, largely due to the low price of natural gas and increasing U.S. carbon emissions overall. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eric Miller

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Our home is in Canadian County, Oklahoma which contains hundreds of deep gas wells drilled since 2008. Each well used 5 to 6 million gallons of water for fracking in this time of severe drought. The potential of contaminating our drinking water is almost a certainty. At present the price of gas is low which limits the number of wells being drilled. Stand up to the fossil fuel industry and deny all applications to export natural gas which will raise the price for gas and cause further depletion of our scarce drinking water. (chairman: Canadian County Safe Water Coalition)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Loranell Breyley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kenneth Wood
17575 Freedom Road
Willow Springs, MO 65793

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

As we have learned from dedicated scientists and engineers, fracked gas emits more methane than any other fossil fuel, hence contributing substantially to climate change. Also, the Sierra Club Atlantic Chapter in "Collateral Damage in the Marcellus Shale Region," notes the health hazard to END USE customers dependent on methane for cooking, for example, since the radon-rich fracked gas from the Northeast source vents off into enclosed living quarters. This country would be exporting a radioactive product. Therefore: Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Gavrielides
1192 Lake Como Rd.
Cortland, NY 13045

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Fracked gas is methane which leaks from gas wells, compressor and condenser stations, pipelines and other gas infrastructure. Recent scientific studies have shown that methane is far worse and more powerful a greenhouse gas than carbon dioxide. This makes fracked gas worse than coal and oil for the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. President Obama, Please be bold and stand up to the fossil fuel industry. The first step is to deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Terreault
32215 Hazelwood St.
Westland, MI 48186

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Helen VOSE

RE: 2012 LNG Export Study

To Whom it May Concern:

Energy isn't free. It never has been. Like whale oil, firewood, and even solar energy, fracked natural gas comes with a human cost. American communities pay the price and take the risks associated with fracking. In some cases, fracking has cost American towns dearly. The least we can say to those in fracking-affected communities – whose air will be dirtier, whose aquifers will be contaminated, and whose tap water may not be safe to drink – is that we will use the fruits of their sacrifice wisely. That means treating every ounce of natural gas as if it's precious, which it is, and using it IN OUR OWN COUNTRY. Allowing companies to export fracked gas would dramatically increase the scale of and demand for fracking in the United States, with all its undesirable side effects, all of which Americans will pay for – yet the benefits of additional fracking would only go to foreign countries and a few superrich energy investors. That is wrong. Please deny all applications to export natural gas.

Sincerely,

Wolfgang Rougle

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne earhart
666 N. Coast Hwy

RE: 2012 LNG Export Study

To Whom it May Concern:

we do not want to export fracked gas. We do not want fracking in our town, state, or country. Are you crazy? Why are you sacrificing the purity of our water? Why are we killing for a dollar? Property values crash around fracking. Those 650 cancerous chemicals will eventually get into our water. Ban fracking. Let us stop killing for a dollar. We are all sick of this. Politicians are bought by gas companies. That is corruption, not democracy. ban fracking and do not export fracked gas please. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is more important for everyone to have clean air, clean water (water is our most valuable resource, not natural gas). We need you to protect the people and our communities from fracking, as we trust you to do so. Not only does fracking destroy clean air, and clean water but it also destroys beautiful areas. Do you guys give any thought to future generations, and what this will do to our world once you've drilled every inch of land that contains gas or oil. I urge you to think about the people and protect the only world we have.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Additionally, FERC has used its federal power of Eminent Domain to permit many, if not all, pipelines including oil pipelines. The exportation of American assets for private corporate profit is a breach of the 5th Amendment requirement of "...property taken for public use" and will result in Constitutional law suits being filed starting with the Constitution Pipeline proposed for New York State. Private equity companies such as the Carlyle Group have invested in water and 60% of the US is still in drought. There are alternative forms of energy but no alternative to water. HVHF poisons large volumes of water which cannot be treated and should be banned Sincerely, Robert T. Ashley 11807 County Highway 14 Delhi, New York 13753

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brendan Merritt
251b Wall Street
Kingston, NY 12401

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. In southeastern West Virginia, fracking poses a threat to our water supply—pure spring water is abundant here. However the karst topography is inherently unstable, making any injection of water and chemicals under pressure a route to disaster.

Sincerely,

Fawn Valentine

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in New York's Finger Lakes region. Many towns and families depend on the lake for drinking water. The potential that waste water with unknown chemicals can be put in this lake is very distressing. Clean water is one of our assets as a state and country. The idea that we would pollute this resource to get natural gas is beyond reproach. The gas has been in the ground for thousands of years and is not going anywhere. Lets wait and try to come up with new technologies that will enable us to extract gas without destroying precious resources. Sincerely, Katherine Graham 1810 State Route 90 King Ferry, NY 13081

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. So far the U.S. market and infrastructure for U.S. citizens to use and benefit from the natural gas being developed has not been seen. There is a glut of natural gas because it is not efficiently available to U.S. citizens. Until U.S. citizens can efficiently benefit from natural gas being fracked, there should be no exports to other countries. Fund U.S. citizen access to current natural gas available before further funding more fracking projects. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.
