

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bonita Staas
11294 N. Henderson Rd.
Orangeville, IL 61060

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

There is nothing more critical to a healthy planet than clean water, and the biggest threat to life as we know it is global warming. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas to protect our health and that of future generations.

Sincerely,

Alex And Anne Cole

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andrew Angyal
7149 Ludgate Road
Gibsonville, NC 27249

RE: 2012 LNG Export Study

To Whom it May Concern:

Halting further damage to the global climate is antithetical to the international export of compressed natural gas from fracked wells. It will advance the development of more, hard to reach and polluting petrochemical that harms US communities. It is simply another gift to this industry which already owns Congress. I read the Halliburton Exemption from the Clean Water Act. This is the trajectory of more petrochemical development and further rule of the American people by and for the petrochemical industry. Surprise everyone and promote the establishment of long term economic advantages for alternative energy development. That would constitute leadership, rather than capitulation to continuing Oil, Coal and Gas dominance of US energy policy. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bruce Katin-Borland

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama: Perhaps our natural gas can be extracted responsibly. Unfortunately, there is currently no incentive for the gas industry to prevent the ecological and global warming consequences of fracking and its aftermath. Until this happens, I urge you to reject applications to export fracked gas. By doing so, you can provide the incentive for the need for the following regulations: 1. Protection of water supplies by requiring that pipes don't leak methane. 2. Protection of the environment from water contaminated by fracking chemicals. It might help if the industry had to pay a bond to cover all clean up if a holding pond bursts. Tax payers are always on the hook for corporations' carelessness. 3. Safety requirements that stop methane leakage during extraction and after. I urge you, Mr. President, to support the taxpayer's wallet and environmental safeguards over corporate profits and temporary jobs. We cannot afford to take chances with finite clean water supplies or with contributing exponentially to global warming. Please reject applications to export fracked gas until requirements are in place. Respectfully,
Alicelia Warren

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It poisons municipal and rural water supplies, adds hugely to carbon emissions, and destroys public roads and national parklands, as well as destroying private property values and community economic infrastructures. Look at the recent film Dear Governor Cuomo for an analysis of community impact in the Northeast, and the argument for why fracking must not be allowed in New York State. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Stand up for citizens, children, communities, farmers, and the right of landowners to live and enjoy their land and homes in peace, free from the threat of corporate takeover by gas companies, pipelines, and invasive industrial infrastructure. The world doesn't need fracking, the world needs true energy alternatives—invest in those, not in the international gas cartel.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chrystie Danzer
759 N 4th St
San Jose, CA 95112

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris Steinberg

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sue Haake
9750 30th St.
Colfax, WI 54730

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. NO FRACKING. EVER.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It seems that humans have the ability to destroy themselves for social and economic reasons. Fracking is destroying our water, our primary tool for survival, thereby threatening our long term survival for immediate gain. Can anything be more stupid?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Sprowls

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lori Cohen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It squanders prodigious quantities of our most precious resource, water. Furthermore, it is likely, although it is hard to gain the fracking industry's cooperation in proving, that over time fracking water and toxic chemicals seep through the earth's substrata, poisoning ground-water and aquifers, and even returning to the surface, where they pollute and permanently befoul—not just surface water—but all the surrounding acreage. This exploitation of the planet and wanton destruction of irreplaceable resources can no longer be tolerated. Now we know. Fracking far exceeds the limits of sustainable practices, even without considering the impact of the methane being extracted for burning. People are responsible for guarding resources for future generations. Fracking is a wanton violation of this principle. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Furthermore, these exports would profit the fracking companies at the expense of everyone else. Fracking for export is unwise, unjust and untenable. Stand up to the fossil fuel industry and deny all applications to export natural gas.

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

You must realize that fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

George Kormendi
17 Chittenden Ave, #3d
New York, NY 10033

U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Henry

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Personally, I think fracking and its toxic environmental effects could really wreck life for more people than we can imagine. Let's not experiment with this . Enough proof has already been gained by the farmers who have lost their livelihoods, the animals lost, and the traces left to find the water and food supply. Fracking needs to be minimalized not maximized. We need to get off gas anyhow, we should feel the pinch where our gas dependency hurts, not in our food and water supply. It's like throwing out the baby as we get rid of the yucky old bathwater, to make fracking bigger.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Bjornson
841 N York Rd #208
Elmhurst, IL 60126

Stand up to the fossil fuel industry and deny all applications to export natural gas. HOW CAN YOU EVEN CONSIDER HARMING THE AMERICAN ENVIRONMENT ONLY TO SEND OUR GAS OUTSIDE THE UNITED STATES. FRANKLY, MR. PRESIDENT, THAT IS TANTAMOUNT TO DELUSIONAL, ILL-ADVISED NEO-CON, BUSH ERA POLICY. THE LONG TERM COSTS FOR SUCH ACTIONS WOULD BE DEVASTATING: IN TEN YEARS OR SO – UPON DEPLETION OF THE GAS RESERVES – THE OIL COMPANIES WOULD PICK UP, PACK OUT AND LEAVE THE IMPUGNED AREAS "HIGH AND DRY" AND SURELY WITH LITTLE RECOURSE FOR RESTITUTION. DON'T ALLOW IT, SIR!

Sincerely,

John Catherine

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeff Gold

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Send the message that fossil fuels aren't good enough any more.

Sincerely,

C. Cory Craig
4053 23 Ave Sw
Seattle, WA 98106

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kristina Swarner

RE: 2012 LNG Export Study

To Whom it May Concern:

THOSE OF US WHO LIVE IN OIL AND GAS AREAS KNOW FULL WELL THE POLLUTION AND UGLINESS THAT COMES FROM FOSSIL FUEL PRODUCTION. FRACKING ADDS ANOTHER LAYER OF TOXIC POLLUTION PRESSURE TO OUR ALREADY THREATENED CLEAN WATER SOURCES. FRACKING NOT ONLY DEPLETES OUR GROUNDWATER AND SURFACE WATER SOURCES, IT POLLUTES ANY WATER SOURCE THAT IT CONTACTS. WE LITERALLY CANNOT LIVE WITH THIS! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

We know you know that fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This is bad for the environment, it produces more CO₂ than burning gas. It leaches toxic chemicals into our water supply and leaves pits of toxic chemicals behind. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carolee Morris
6497 Walden Pond Lane

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lee Loewenstern
1004 Valley Glen Road
Elkins Park, PA 19027

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Braude

RE: 2012 LNG Export Study

To Whom it May Concern:

I am writing to urge the DOE to not allow gas from fracking operations to be exported. Fracking is a toxic threat to American communities and the climate. It is bad enough to consider fracking as a rather repugnant means to a necessary end - energy independence. But why would we *ever* export it. Essentially we would only be destroying our land and the health of the American people for SHORT TERM profits for VERY FEW. In a sane country this would be seen as a criminal act. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Benjamin Cleaves

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann mcgarry

RE: 2012 LNG Export Study

To Whom it May Concern:

We have a national and international crisis on our hands in global warming and someday everyone will wake up and wonder why we didn't do more when the science was there to demonstrate. The science is also there to show that we should proceed carefully with hydraulic fracturing and take steps. Unfortunately, again, the political will is not there to stand up to the corporate bullies who cry "job creation" to justify their short term profits and the ruin of our valuable natural resources of air and water. Fracking is a threat to our communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mitzi Duxbury

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nanci Steeb

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Scott Meihn
621 East Mercer
Seattle, WA 98102

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It has been proven that fracking can cause earthquakes and harm the plants growing on the land which in turn harms both the non-humans and humans who eat the plants. Plus it harms both air and water safety/quality. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. IF the purpose of taking the non-renewable natural resources from our land is to reduce America's dependence on foreign energy resources then how can selling this natural gas to other countries provide for American needs in 10 years or 20 years? Stand up to the fossil fuel industry and deny all applications to export natural gas. Please save our non-renewable natural resources for America. And while you are at it make sure any fracking is done with all the most recent technology to make it as environmentally safe as possible.

Sincerely,

Janet Snyder

To Whom it May Concern:

I am so disappointed... not that I'm surprised as this administration has not been too strong on environmental concerns – which I will never understand because it is clear to me that I live on this planet & I need a healthy planet to live. Duh. But I guess you all over in Washington DC only need money & more money to survive. I do not want to live in a world where we think that our experiments are worth more than the lives of the other creatures (& plants & spaces) that surround & support us. Our own well-being depends on those creatures whether you choose to see it or not. I feel this is so important – we depend on our environment & we must realize that it depends upon us! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. STOP THIS DANGEROUS PRACTICE NOW!!!!

Sincerely,

Paul Shabazian
16816 Simonds St
Granada Hills, CA 91344

RE: 2012 LNG Export Study

To Whom it May Concern:

I know that energy is a "World Market" but there is no good reason why we have to sell the Natural gas produced in this country. Although methane produces less carbon dioxide than coal or oil when it burns, methane itself is many times more powerful as a global warming gas. Large amounts of methane are released into the atmosphere during the drilling wells and transfer of the gas, with the potential to cause greater acceleration of global climate disruption than even other fossil fuels. We need to concentrate on energy conservation and alternatives of wind and solar energy. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

If there is a serious concern about decreasing carbon output, the plan to increase fracking is just plain stupid! Adding fuel to the fire is that exporting product means that our efforts to contain carbon domestically is futile. Whatever we have managed under our rules will be ignored outside the USA and increased pollution will fill the air...most probably falling over us, in spite of ourselves. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert And Helen Buttel
766 S. Front St.
Philadelphia, PA 19147

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking endangers a water supply that is already threatened by drought. It can destabilize bedrock, leading to earthquakes in regions that are not prepared for them. It is a wasteful method of extracting still more fossil fuels, on which we should be reducing our dependence, not finding more and more environmentally harmful ways to release and use them. And the people in this country who desperately need better jobs and higher wages will see no economic benefit at all. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rick Straub

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Frances Barber

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Fracking can destroy requires huge amounts of water and also injects numerous chemicals, some know carcinogens, other completely unknown, into our aquifers with the real possibility of permanent contamination. Farms and livelihoods, and people's health have already been destroyed by fracking. Who is to compensate the victims of fracking? Fracking should be curtailed, not accelerated. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Please tell me you're not serious about destroying our American environment and polluting the atmosphere so that fuel companies can make huge profits by selling the products of our destroyed environment to other countries. America's lands will not recover from fracking. We don't get a second chance at making this Earth. Our children and grandchildren don't need yet another toxic legacy to live through. Destroying the environment permanently for the fuel companies' temporary gain? I thought this was the reasoned, sensible administration, not one of the Bushes, who were desperate to make money for their fuel buddies.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Roper-Brastow

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Theresa del Rosario

RE: 2012 LNG Export Study

To Whom it May Concern:

As a retired physician and experimental scientist, I think that it is unconscionable that our government would allow industry to pump fluids that contain any amount of officially unidentified hydrocarbon carcinogens into the ground. In my opinion, there is no safe dose of the class of carcinogens known as "initiators," and we do know that fracking fluids contain initiators. It has been argued that they are in low concentrations; however, we are in fact pumping millions of gallons of fracking fluids and thousands of gallons of initiators into our ground, and many of these will appear in our drinking water eventually. Industries should be liable for the long-term damage that they are doing to people. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas (Tom) Pretlow

RE: 2012 LNG Export Study

To Whom it May Concern:

It's not just the fracking that is the problem— it is the TERRIBLE IMPACT ON OUR LOCAL COMMUNITIES WHEN OUR HILLS OF SAND ARE DESTROYED to use in the process for drilling for the oil. The hills provide great protection for our water—when they are gone to the fracking industry, they are gone forever. The impacts are huge—we lose our non-replaceable hills and the fracking process further destroys our environment and impacts the health of our citizens. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Natural gas was being advertised as the way for the USA to have energy Independence, how does exporting it accomplish that goal or pitch? It doesn't. As usual it is just a tactic to dupe the American public to allow big business to make more money at local citizens expense. These companies will not pay the actual price to obtain these products from the earth, the local communities and individuals will pay the price in dollars and health down the road as is so often the case, to push forward the agenda of the well financed and powerful.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fossil fuels are the energy of the PAST! America become an uncaring, barbaric govt that has lost any interest in the well being of mankind, that does not care if children go to bed hungry or die, if our young people have no future, if we are 39th in the world for longevity, if our air, food and water are posioned. They don't even care if our oceans are dying or if mankind dies. It's a kind of mental illness that places everything that is important to the majority on the back burner so that a few at the top can live out their short meaningless lives in comfort and security. We only have this one beautiful planet that gives us everything we have and a few precious years to enjoy it. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ellen Gachesa

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Wootten
1008 E. Concorda Dr.
Tempe, AZ 85282

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Trudy Faries
734 N St Anthony Pl

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking.” What a great word! How easy it is to slip into a conversation without actually using the ”f-bomb” word! Such as: ”Frack you!” ”Dick Cheney is a real mother-fracker.” ”Holy Franken-frack” (to revise an episode of ”Dexter.”) etc. Okay–humor aside: what happens in the process of fracking is no joke. People’s well water has been contaminated with dangerous levels of radioactive ions & strange chemicals in areas near where this process is ongoing. In some places, the huge quantities of water pumped into the gas-bearing shale rock to extract the natural gas has created minor earthquakes. We need better–renewable sources of energy. Let’s not support processes that could create huge health & environmental problems for us in the near future. Fracking could be ruinously expensive for us–beyond all benefits we think we are getting from it now. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Surely the engineers & scientists involved in creating new sources of energy can come up with safer, cleaner means of providing us with what we need. Let’s give them the funding and encouragement to do so! Don’t waste support on something as problematic as fracking–FRACK THAT!

Sincerely,

Sara Wyman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a Toxic threat to American communities and a Climate threat worldwide. The exporting of fracked gas will dramatically increase the damages. I urge you to deny applications for the exportation of natural gas.

Sincerely,

John Brown
100 Greening Drive
Easton, PA 18045

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gigi-Kos Penn
2233 N Hamline Av 650 (No Soliciting)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karolyne Lucero

RE: 2012 LNG Export Study

To Whom it May Concern:

I live within 10 miles of a proposed LNG export facility. Opposition here is strong, given that it will harm our local economy which is based on fishing, logging and tourism, all of which will be negatively impacted by a huge LNG plant in our backyard. Not to mention the safety aspects of a potential leak and explosion from the tanks, pipeline, and massive ships, especially given that they want to locate the tanks in a historic 9.0 + earthquake and tsunami zone (does anyone remember Fukushima? Not to mention fracking, which is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Giving the petrol bidness, which cares not a whit about environmental matters and even deliberately befouls pristine areas just to prove they caan, permission to frack is like handing a loaded semi-automatic weapon to a madman and showing him the nearest school. If they aren't willing to disclose all facts about their operations and submit without fuss to strong regulation, tell them "Absolutely NO WAY.

Sincerely,

Stonewall J. McMurray, III

RE: 2012 LNG Export Study

To Whom it May Concern:

My home faces the DELAWARE RIVER where the New Jersey American Water Company draws in drinking water for three counties. FRACKING THREATENS HUMAN HEALTH - the chemicals used cannot be shown to be benign because the natural gas industry has refused to make public what chemical combinations are being pumped deep underground. PLEASE DO NOT permit fracked gas exports! Export markets would dramatically increase the scale of and demand for fracking in the United States. Doesn't the long-term health of the US population deserve government concern and protection over the short-term profits of corporations?

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynne Harrington-Bullock

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. You may believe that there is a limit to the licenses your administration will grant to drill, extract, transport and export. But once you reach that arbitrary or pre-determined limit, the industry will once more ramp up the pressure to drill more, and more, and more. Until every last well has been drilled, and the environment has been so thoroughly corrupted that it is beyond repair and we are inexorably in the clutches of air well beyond 400 ppb, public water has been irreparably fouled and climate change is irreversible. Then what?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cynthia woodyard
7070 Sw Canyon Drive

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steven Bollock
1002 Mccloud Ave
Mount Shasta, CA 96067

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

In the future we will look back at fracking as one of the most destructive and desperate last ditch efforts to rely on fossil fuels for our energy. Fracked land is nature's Hiroshima. To destroy the earth in this manner for exporting energy without considering any consequences besides profit-making is ignorant and immoral.

Sincerely,

Anna Ransome

RE: 2012 LNG Export Study

To Whom it May Concern:

Natural gas obtained via "fracking" is not the energy of the future. Our nation's water supplies and the planet's climate will both suffer damage, perhaps irreparable, if fracking is allowed to proliferate. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen Sadowsky

RE: 2012 LNG Export Study

To Whom it May Concern:

It doesn't make sense to destroy the health of our citizens and our air, water and land in order to send fracked gas overseas! Let's start using our brains, people! Put the money into environmentally correct energy sources like wind and solar energy. Fracking sucks the life out of our people and the land!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Terri Kennedy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The method of extracting natural gas is harmful to the water supplies and the fabric of the communities it affects. Short-term profits for a few are traded for the long-term health of the water and the land that supports the people living there. This is not an economic boon! We MUST instead support and fund real energy solutions, like solar and wind, which produce good highly skilled jobs and long-term benefits to all people. Please focus on what you know is the right path, and not what you know is the profitable path for a few. Please.

Sincerely,

Rob McLane

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PERSONAL COMMENT: A pipeline could be coming through my backyard. We are of retirement age and we would lose the equity on our home. Pipelines are dangerous and take a swath of our forest land away. We are surrounded by a park. The animal life is awesome here. All this would be destroyed as well.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Palmisano
1578 Las Canoas Rd.
Santa Barbara, CA 93105

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jane Brody

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It is irresponsible to permit such an action as releasing contaminants into our environment, and specifically the water we drink, wash, and clean from. Just as one would never allow poisonous gases to contaminate the air, one should never allow - let alone support - fracking to be exported. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Now is not that time to abandon the American people. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Clara Bakker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joanne Engelking
4017 Dupont Ave S
Minneapolis, MN 55409

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patricia Tellini

Ashland, OR 97520

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

There should be no fracking in this country until until all substances used in the process are known and assessed for toxicity and potential water quality impacts. Fracking for export should not even be on the table!

Sincerely,

Alice Glasner
722 Madison St
Albany, CA 94706

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marcia Kay

RE: 2012 LNG Export Study

To Whom it May Concern:

There is NO way my clean water, my bucolic surroundings, my community should be ruined to provide indecent profits for energy corporations and cheap natural gas for China. NO WAY. National security is just as much about preserving our natural resources as it is cheap energy. More, in fact. We've now gone from discussing fracking as a way to become energy independent to allowing profiteering off my and our communities. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. As such, the real costs of development are not yet known, and likely to far exceed projections not just financially, but with regard to peoples health and longevity. much less escalating production in the interests of exporting it, is with utter negligence for the greater welfare and protection of people, and the environment on which their very lives depend. Your oath of office makes you one of our sworn defenders. Please act now to defend us. p.s. Working to hide potential threats of consequences of fracking is working to obstruct justice, and to defy the interests of our greater protection and welfare. (In case you hadn't realized)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If our goal is to be energy independent, we had best keep the natural gas here in the US.

Sincerely,

Ingrid Karlstrom
Po Box 101
Winter Park, CO 80482

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Shipps
2758 N Paulina St
Chicago, IL 60614

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. As a soon to be resident of Ulster County, New York, fracking is of great concern to me. We need to be protected from an industry practice that lacks openness (e.g. what chemicals are being used), lacks sufficient oversight and monitoring, and has clearly already caused contamination of ground water and earthquakes.

RE: 2012 LNG Export Study

To Whom it May Concern:

Although the use of natural gas from hydrofracking appears to be better for the environment than burning coal, hydrofracking creates much byproduct and toxic waste, even if it is done correctly. The export of natural gas in liquified form is not as climate-friendly as the use of the gas here. Further, the export of liquified natural gas will increase the demand for more hydrofracked gas, leading to more pollution here. Isn't it time we worked to develop renewable alternatives? Our renewable water resources, and the ecosystems that depend on it, are more precious than the limited non-renewable fossil fuel resources we are extracting. Please deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Thompson
9898 Watermill Cir.

RE: 2012 LNG Export Study

To Whom it May Concern:

Daily, we hear there is an energy crisis in this country. And that sometimes the environment must take a back seat to the country's energy needs. Yet suddenly we have excess fracking-produced natural gas - and enough to export. Then it is time to first put in place strong environmental protections for groundwater safety and to control toxic chemicals used in fracking. When I see that these companies are doing all that they can to keep safe our health and environment, when they freely disclose what chemicals and how much they are using in their fracking process, and when they demonstrate that their treated water contains no toxins nor environmental threats, then and only then can we start talking about excess production and exports. Let the fracking companies embrace their civic, public and environmental responsibilities now that their cash registers are singing overtime. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elizabeth kirk

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donald Struggles

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live over the Marcellus Shale in northeast PA and I'm terrified of fracking coming to my neighborhood. We need more wind energy and solar here, not fracking. I value my home which could be hit by a fracking earthquake. I value my clean air and my clean water. Living in rural PA means I have a well for my water and I like it pure. Considering how little the gas and oil industries contribute to the country in terms of taxes, sending our resources overseas won't help us in the long run. It will just help people like the Koch brothers and their ilk, and they don't follow the laws regarding pollution as it is. Please don't export our fracked natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please PLEASE have the courage to not capitulate to the gas-fracking industry. this is a dangerous industry, as it now stands, threatening water, human and animal health, and the environment as a whole. Wouldn't it be better to promote the cleanest energy there is: SOLAR? Horizontal hydrofracking is NOT the answer!!!

Sincerely,

Deborah Hecht

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is not the place to compromise. We have so little time to avoid disastrous climate change, AND fracking is destructive to the communities and environment. The upsurge in fracking has driven down the price of natural gas to the point that people are no longer as worried about conservation. In case you are wondering, we are not rich, barely able to pay the heating bill, but I don't want my child to grow up to a barren desert of a world.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne Burg

RE: 2012 LNG Export Study

To Whom it May Concern:

Already I fear a disaster in Los Angeles Harbor where a propane facility is within mere blocks from my son and his family's home and nothing has been done to move this facility from a highly populated neighborhood in the more than 30 years of its location there despite numerous protests to do so. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We must push for non-polluting renewables which don't mean more future damage to our communities, health and climate. NOW....the time is NOW! Not tomorrow to address this issue.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking will make drinking water a scarce world resource. The enormous amount of drinking-quality water that must be used in fracking makes it an unacceptable practice. Barges are not able to navigate the Mississippi River because of the drought in the Midwest. The fracked water can't be recycled. Isn't a supply of safe drinking water more important than a profit on environmentally harmful energy?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Annie Winstead

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dunja Ruljancich
8940 Ne 13 Street
Clyde Hill, WA 98004

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roye Bourke
184 Hemlock Road
New Haven, CT 06515

RE: 2012 LNG Export Study

To Whom it May Concern:

If we are concerned for energy self-sufficiency, as your administration claims, we should not export our energy resources - we should keep them to use at home. The potential harm of fracking is justified on the grounds of making us more energy self-sufficient; this argument is specious if we are fracking merely to put dollars in the pockets of energy companies. Moreover, allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sarah Dougherty

RE: 2012 LNG Export Study

To Whom it May Concern:

The data is there for all with eyes to see in the exiting sites where fracking is taking place: It is an environmental disaster. The industry, however, with the collusion of some state governments, uses the legal system to silence the victims; this allows "well-informed" people to pretend that there are two sides to the issue; this allows government agencies to pretend that "further study is needed." As with climate change, as with gun control, powerful economic interests can stifle opposition, suppress data, then prolong political "debate." But there comes a tipping point when the emperors of a environmentally damaging industry stand naked and everyone can see them for sociopaths whose only concern is to make money. Having huge resources, they will remain relatively immune, of course, but their hired help who play the part of "regulators" might find themselves with less cover. Given the weight of evidence against fracking, the only conclusion that a reasonable person will be able to draw from a Department of Energy okay of exports is one of corruption and malfeasance.

To Whom it May Concern:

Fracking is a toxic threat to American communities' health. Then there is the use of millions of gallons of water, clean water that will be used to release the gas; and what we get in return? Radioactive toxic sludge, inability for waste processing plants to process the brine and the release of these toxins in our rivers. You will be poisoning all of us gradually, taking away our clean water and for what? To make more money? For whom. Why can't alternative clean energy be developed - stand up to the gas drillers who don't care who dies for their greediness.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Oswaldo Ortiz Jr.

To Whom it May Concern:

Dear President Obama, I am asking you to stand up to the promise you made when you ran for election in 2008. Your message to us was: "We will harness the sun and the winds and the soil to fuel our cars and run our factories. The question we ask today is not whether our government is too big or too small, but whether it works - With old friends and former foes, we'll work tirelessly to lessen the nuclear threat, and roll back the specter of a warming planet. Please use the power given to you by "we the people" to protect and serve us, NOT the corporations that own Oil and Gas where only the same few will benefit at the expense of good tax paying Americans. To allow the LNG pipelines to open for export goes against everything you have promised us. Sincerely, Briget Shields

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patricia Segrestan
701 Gibson Drive
Roseville, CA 95678

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We the people of the U.S. do not want this exportation of natural gas produced by fracking! We do not want more damage to the environment and people's health caused by fracking, the dangers of transporting the gas, and the emissions resulting from burning it. Please say no to the fracking industry!

RE: 2012 LNG Export Study

To Whom it May Concern:

Please consider the planets' future inhabitabilty, meaning your children and their future generations ability to enjoy this wonderful home. Fracking policies look only at feeding today's wasteful energy practices and the wealth it provides for the 1%. We have the ability to use sustainable energy sources but do we have the will? If we, America were to use some of the money currently used on warfare, to build the electrical infrastructure and the solar, wind and geological sustainable energy industries, just think of the jobs it would provide today, and the future for our children. This would eliminate the reason for the huge defense budget! Think about it before making a mistake that will affect the future of America. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Davis

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Analysts have identified 41 known chemicals in fracking fluids. These are very toxic and will, in any form pollute land, water and even air. Prevention calls for barring their use and the best way is to forbid fracking in anywhere in the United States. Since the government has failed to ban any fracking chemicals, nor does it propose such a ban, how can fracked gas export offset pollution so dangerous to the health and life of our citizens? Does this not impinge on the right to life?

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dennis DENUNZIO

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. All persons responsible for making final decisions on this subject should go visit areas where this is currently happening and see for themselves. It doesn't take a genius to equate pipelines running above ground less than 5 feet away from the banks of pristine rivers to realize that one leak could poison that river FOREVER, killing the fish therein and thereby affecting the economy of the guides and lodges that cater to the sportsmen as well as the animals who drink from that river and the ranchers and farmers who depend upon it as well. I particularly recommend the area in Wyoming from Hoback Junction to the town of Pinedale, where such chilling pipelines can be seen and where fracking has been going on across the areas where cattle range as they have for many decades. One accident is all it would take. Just one. Don't open any more areas to the potential for disaster!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Sharpe

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jr Greer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking is not safe; wells are being contaminated, and even the EPA has caved in to oil industry leaders on the issue. It's time to stop fracking. They argue it will increase gas supplies in this country; not if they export it.

Sincerely,

Monika Winchester

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pj Janowitz
7821 W 15 Ave
Hiialeah, FL 33014

RE: 2012 LNG Export Study

To Whom it May Concern:

In our state of Texas, the Chinese are pumping billions of dollars into fracking the Eagle Ford formation to the north of Corpus Christi. This a region of underground springs and rivers that were already severely impacted by the drought. Our South Texas communities have already become boom towns where roadways, health facilities, and other vital infrastructures deteriorate from the huge increase in usage. On a recent trip through the region, we saw the landscape blighted by numerous gas flares. We strongly urge you, President Obama, to deny permits to ship natural gas. These operations are costly and dangerous.

Sincerely,

Heinz And Margaret Aeschbach

RE: 2012 LNG Export Study

To Whom it May Concern:

As a biologist who has been reviewing and investigating the harms of slickwater hydraulic fracturing to our water resources first hand and the inadequate laws and loopholes that exempt the gas drillers from important environmental protections, I urge the Obama administration to abandon these efforts to consider the export of fracked gas. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Instead we need to move to renewables and non fossil fuel energy alternatives. By investing in drilling, we are only prolonging an old industry that should have been phased out years ago when scientists showed the harms of climate change. Methane gas is not clean. To go down this road of gas as a bridge fuel is harming our children's futures in a big way. One could say with what we know about this industry and fossil fuel damage, it is a criminal violation to future generations. Please do not bow to the drillers. Listen to those who elected you and stand up for what is right in your last term. Be great.

Sincerely,

Faith Zerbe

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barb Mechalke

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Kurilla

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diane Crang
