

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patty Lambert
2354 W Gatesburg Rd
Warriors Mark, PA 16877

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Until the toxic chemicals used in fracking is proven to NOT be a tremendous danger to our ground water and God only knows what else. (There has been conjecture about fracking causing earthquakes!). If the POTUS agrees to permit exportation of gas it obviously is going to increase the problems caused by fracking and create a demand for more and more fracking. Please, President Obama, do not sign the permits for these 16 gigantic fossil fuel projects.
F

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andrew Lee

RE: 2012 LNG Export Study

To Whom it May Concern:

President Obama stated on Jan. 21 that he will address Climate Change. If the 16 pending permits that would allow shipping of natural gas overseas are greenlit, then this declaration rings hollow. Allowing such shipping give mega-energy companies a huge incentive to continue and even increase fracking. The Dept of Energy's terrible report on fracking is flawed. Yes, it states that gas exporting would bring in money - but at what cost to the American citizens Pres. Obama was elected to protect. This report downplayed the devastating impacts of fracking. Don't let the dollar sign blind judgment. Take the correct stand and protect our climate, our health, and our future.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have other sources of natural gas that could be generated from sewage and other waste sources. They would be better investments with less ecological damage than what fracking is doing to our fresh water sources. Fresh water is becoming a limiting commodity on the world market and we are screwing up ours. Once exporting is encouraged the supply and lower prices for home will not be realized and isn't one of the arguments for this type of gas mining for our national independence from outside sources of energy.

Sincerely,

Carol gault

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Catherine Hays

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen And Robin Newberg

146 Granville Rd

North Granby, CT 06060

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. No meaningful examination has been conducted of the toxicity of the materials combined for fracking, nor have their impacts on groundwater, soils, and geologic stability have been even marginally studied. If we need to cut back seriously on energy use rather than destroy the planet, then its well past time to consider such drastic measures. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking has ruined peoples water supplies, their way of life (you can't farm or grow your own food without clean water); it is dangerous and unnecessary. When fracking goes bad, folks are stuck with their mortgages, homes & land that are unsafe to live on. "Interestingly enough" there are earthquakes in areas that are fracked. I do not think this is a coincidence at all. Tampering with the layers of our earth, using nasty chemicals to extract some gas out...it is all just ridiculously unsafe. Solar, wind and water along with truly renewable and sustainable bio fuels are the way to proceed safely and in a healthy manner. Fracking is not the answer to any of our energy needs, our environment's fragile state or our health and well being. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

I am concerned about the prospect of shipping American natural gas overseas and the implications for increased extraction by fracking in the U.S. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This is an unwise strategy at this time. Please deny all applications to export natural gas. Thank you for the opportunity to comment.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Darrel E

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. China is already suffocating in carbon fumes. And the US climate is already hostage to climate change disasters driven by burning fossil fuels. Stand up to the oil and gas industry and deny all applications to export natural gas. Instead, increase support for development of solar and wind energy, along with the expanded electric power grid they require—a source of green technology and construction jobs.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Schreiber
301 Summer St
Arlington, MA 02474

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. There is a family in Texas whose water is now flammable due to methane released from fracking. Initially, government agencies were very concerned about this. I read that after being pressured by the industry groups the government is now saying they will look into it but no decision is expected to be made for quite a while. In the meantime, this family is spending a fortune buying water that is safe to drink. They are still able to set their water on fire. That doesn't sound like something I'd want to expose my family to. What about you? Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eileen Morentz

RE: 2012 LNG Export Study

To Whom it May Concern:

I support fracking to extract gas under strict environmental controls for domestic use only. Exporting gas adds to the environmental burden & reduces the opportunity to use domestically produced gas to power public transport (buses) and long haul & local trucking. This would further reduce costs associated with oil imports & gas exports. This seems to me the most prudent public policy that should be sufficiently profitable to expand gas use domestically. Thank you for the opportunity to comment.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

George Voss

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking should be considered an energy-extraction process of last resort, a stop-gap measure to be used only until we can develop better sources of energy and control our use of energy. Fracking has enormous costs to the environment and to the lives of people living near it. The costs might be justifiable in order to supply our own energy needs; they are too great to justify shipping the resulting gas outside this country. There are many ways to earn money, but we have only one country in which to live and from which to extract resources for our future. Please don't allow natural gas to be exported.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please do not allow the industry's greed to pressure you into giving in to them, resulting in the destruction of the beautiful land, clean water and clean air that this country of ours has been blessed with.

Sincerely,

Nancy Hayes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janet Saupp

8135 W. Port Madison Rd.

Bainbridge Island, WA 98110

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. i've always thought we should preserve our gas and the fracked gas is no exception. Someday in the future we will be glad we did, either because our environment will be healthier or because we are the only ones with gas left. So we have to pay a little more now but with big rewards later. Let us save our resources and use other less foresighted country's resources instead.

Sincerely,

Judy Omre

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Allowing the expansion of markets for fracked gas would be a step backward in the intelligent combatting climate change. The facts of the harmful chemistry involved in the extraction of this product and its potential for devastating effects on our climate and our communities, should have resulted in an automatic rejection of this proposal. It shocks me that this has even been considered in a positive light by those who should be the guardians of our health and environment.

Sincerely,

Elizabeth Moore

RE: 2012 LNG Export Study

To Whom it May Concern:

The environment in general is in great enough peril without the fracking process. Most of the decision makers in Congress, as well as President Obama, seem to want the quick fix, to take the money from fracking and say what a great job they've done for the economy. I think that is a foolish approach to our insatiable energy needs. Even though the fracking process is many years old, only recently has it come to the attention of the American public. Some victims of fracking practiced near their homes tell a very disturbing story. I say leave the gas in the ground until a less toxic means of extracting it can be developed. Further exploitation of the fracking process and the dangers it poses to the American people must not be allowed to continue. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lamar Pittman

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Our focus (and resources both natural and financial) should be concentrating and developing the following energy strategies (not necessarily in this order and not made in China, please!) De-salination Hydro Electric Hydro solar hybrid systems Wind (Did I mention not made in China?) Solar steam Solar photovoltaic Oil and gas and their effect on the environment (In getting to it, extracting it, transporting it, refining it, storing it, and finally using/ burning it) has got to be exposed for the complete waste of time and energy that it is. Time is running out and renewable should not only be embraced and implemented, but we should lead the world in making the equipment, implementing the systems, and giving American companies and citizens jobs. Producing and maintaining this type of renewable product here, will produce jobs, revenue and a tax base for America, and Americans. Fossil fuels should be used for air travel only! Every roof top in America could become the new power plants for this country. Very soon my photovoltaic roof will charge my car! At least I will be able to tell the oil companies how and what I think of them with my wallet. You should too! Please wake up! Stop the fracking and start something good for the planet and this country! Did I mention jobs and revenue?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joshua Blanchfield
15 Warrenton Ave.
Hartford, CT 06105

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking will impact on human health and the environment and the fuel obtained will not stay in the US but will be shipped out elsewhere for the sole profit of the corporations who perform the fracking; i.e., we reward private corporations for destroying our health and the environment. How does this benefit the citizens or the nation? It doesn't.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Katherine Wright

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We should use our domestic natural gas resources we can get without fracking for home heating in addition to a big increase in geothermal. We should move to other sources for electricity such as wind, tidal, small scale hydro and solar buildings. We do not need to put communities at risk for fossil fuel companies to make more insane profits.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

La George
339 Oney Ave
Huntington, WV 25705

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking threatens not just American communities but also the climate that our agriculture and commerce depends on. Why would we promote exporting fracked gas when such exports would dramatically increase the scale of and demand for fracking. The world desperately needs less use of carbon-based fuels and more research, development, and implementation of alternative energy sources. Please stand up to the fossil fuel industry, which always has its hand out and benefits wrongly from huge subsidies that I, as a taxpayer, hate to pay.

Sincerely,

Mary Warren

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. These export terminal pose great danger to populations near them. Why are we EXPORTING Gas ? Just to line pockets of profiteers? We should be saving the gas for our use as we transition to renewable resources for future generations. Now a pipe line wants to be built through our community within the evacuation zone for Limerick Nuclear Power plant just to export gas that we can't use??? None of this makes sense for now or for future generations.

RE: 2012 LNG Export Study

To Whom it May Concern:

Where will we import the WATER from when our national ground water tables are DECIMATED by fracking. When are we going to grow up out of this selfish cycle of SHORT-TERM thinking. Our society cannot remain in denial and stupidity forever...there is little chance of "forever" or of ongoing quality of life with current practices. Our earth is on loan from our children...it is inexcusable and reprehensible to allow more fracking. Support an expanded economy with resources allocated to clean energy development. There are methodologies available that are continually quashed by big business, by dollars, by selfish and short-sighted thinking. We must change our approach. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Larkin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to US communities drinking water aquifers (chemically contaminated underground aquifers can not be easily uncontaminated) as well as the climate of the entire Earth. Require that the current fossil fuel subsidies from the US taxpayer be applied to the transition to sustainable energy. Remove the exemption for fracking from the Clean Water Act. Require that sufficient bonds to ship in drinking water in perpetuity for the affect communities be posted before fracking is allowed. Do not allowing fracked gas exports when "flaring" of natural UNFRACKED gas continues. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

The largest paragraph in President Obama's 2nd inauguration speech was about climate change. During fracking methane gas escapes into the atmosphere. Methane is a greenhouse gas that remains in the atmosphere many, many, many more years than carbon dioxide. Fracking contributes to global warming and therefore contributes to the powerful and destructive changes in the planet's climate. In that speech Obama reiterated the duty of We the People, citizens, to work together for the common good, letting our elected officials know the facts and our common sense opinions. Well, here it is: Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. More fracking means more contamination of millions and millions of our precious water – drillers call it "waste water". There is a draught in the midwest yet drillers want to divert and ruin the water farmers, natural forests, wild and domestic plants and animals and human beings need, now, 4 years from now, 40 years from now and 400 years from now. U.S. geologists have confirmed that earthquakes in places like Oklahoma were caused by breaking the deep shale by fracking - hydraulic fracturing. Drillers now want to frack in Southern Illinois the potent New Madrid Fault lies near. Get rid of Dick Cheney's 2005 "Haliburton Exemption" on disclosing the toxic chemicals used in fracking. Let Obama's legacy be that he banned fracking and saved the planet from more greenhouse gas. Obama won't need a legacy if we are all poisoned and dead from contaminated water from fracking.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margot Fetz
1045 E 20th Ave
Eugene, OR 97405

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paula Johnson
616 Stuart Road
Mt. Pleasant, WI 53406

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Weatherwax

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patrick Lesher

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Julia Wellman

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Teri Camery

RE: 2012 LNG Export Study

To Whom it May Concern:

I am totally against fracking no matter how much \$\$\$ it brings to the economy—it has yet to be proven safe for the environment and human beings. Many people, including myself, are ill from toxicity from the food we eat, the water we drink and shower with and the air we breath. The medical community has not even begun to recognize or acknowledge that toxicity is the root of most of our major illness. Fracking contributes to toxicity with it's high emissions of methane and the possible contamination of ground water, not to mention the over-consumption of that precious resource. I cannot think of anything worse than to start exporting fracked gas. This will only give the oil and gas companies more incentive to do more fracking. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cathy Seay

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ben Rall

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tanis fletcher
62 Wild Harbor Rd

RE: 2012 LNG Export Study

To Whom it May Concern:

If we are going to allow fracking, shouldn't we at least reap the benefits, since it's a toxic threat to American communities and the climate??! Why would we allow fracked gas exports, when we could use the domestic energy here in the US???! Stand up to the fossil fuel industry and deny all applications to export natural gas!!

Sincerely,

M McCarthy

RE: 2012 LNG Export Study

To Whom it May Concern:

Our community is fighting to preserve our water supplies and scenic resources from potential natural gas extraction in the Thompson Divide. It seems Federal rules intended to provide advantage for corporations stack the deck against us. It is one thing when proponents talk about creating energy independence, its quite another when we might sacrifice our way of life for the sake of profits only. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tom Kunhardt

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maggi Davidson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Yeates
3120 Montclair Street

RE: 2012 LNG Export Study

To Whom it May Concern:

Today, natural gas prices are low because of increased supplies due to new fracking drilling technologies. Because gas prices are low and supplies are high, utility powerplants in the eastern United States are converting dirty coal burning powerplants to cleaner burning natural gas plants. Because US natural gas prices are low, companies are moving manufacturing plants back to the US, and creating new manufacturing jobs here at home. This dynamic will be reversed if DOE allows big oil and gas companies to begin exporting fracking produced natural gas abroad. Allowing fracked gas exports would decrease the domestic supply of natural gas and drive domestic natural gas prices back up to the point where coal powerplant conversions would stop, and companies would stop moving manufacturing back to the US. In addition, fracking exports could dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This would result in tremendous environmental damage, overuse of water when the western US states are already facing water shortages, and pollution of underground water aquifers we cannot afford to lose. Please stand up to the fossil fuel industry and deny all applications to export domestically produced natural gas.

Sincerely,

Don Wood

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter Townsend

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. The idea of destroying American land so that we can use every last drop of natural gas underneath it is bad enough; but forcing our communities to suffer the damage just so the product can be exported is intolerable. Oil company profits are NOT the most important factor in this equation. It's time to find some energy alternatives before big business is allowed to lay waste to this entire country, if not the entire world.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sibyl Kellman
6230 Greens Corner Rd.
Galway, NY 12074

RE: 2012 LNG Export Study

To Whom it May Concern:

PLEASE, we have to slow down a little. We know what the reports are regarding fracking and pollution. To frack for a domestic supply is one thing, to frack for export is "entirely" UNACCEPTABLE! Scientists and people in environmental and consumer groups know they need and use energy, also, so they have no reason to block energy supplies, UNLESS it's because they know more than the industry is willing to tell us; in other words, the people who have our interests at heart are not profit-motivated! PLEASE, listen to those who actually do have the interests of the public and the environment as their #1 priority.

Sincerely,

Dianne Walthers

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Heather Starsong

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would sharply increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Steinhart
104 Lathrop St.

Stand up to the fossil fuel industry and deny all applications to export natural gas. Living in western Kansas where the drilling has increased in the last two years, I see little hope of having a peaceful and clean earth while I live out my senior years if this foolhardiness is allowed to continue. You that live in the Washington, D.C. area need to come out to the real world where this sort of abomination is taking place.

RE: 2012 LNG Export Study

To Whom it May Concern:

In addition to the below standard arguments, my fears relate more to the dollar costs that taxpayers bear as part of the fracking process. Whether it be road deterioration caused by the volume of trucks or the harm to our water supplies (much more valuable than "natural" gas), it is the taxpayer shouldering these costs. If the fracking industry starts to pay its fair share of the public costs and environmental risks, then they would more likely have my support. However, presently, taxpayers should be providing welfare for such a profitable industry. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Emily Herb

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Reva Holmes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There was no Public Environmental Health Studies done prior to this push for more toxic fuels. Due to this neglect I was exposed repeatedly by fleets of chemical transporters and waste residual tankers, and now I am suffering the most horrendous health problems. And in PA we have NO RECOURSE for our protection, physicians, nor a Health Department which knows anything whatsoever on these toxic chemicals in "fracking". And in the past 3 years our air is so polluted with toxic chemicals; including our public drinking water which goes from brown to black has made everyone in our area suffer the health effects. There is NO EXCUSE whatsoever for permitting and allowing "fracking" anywhere. Nor should there be any exporting on fracked gas!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Davis
2830 Pitchblend Ct
Grand Junction, CO 81503

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. A personal note: fracking has made prices come down too much, encouraging waste. Further, gas should be used for plastics, not just burning. Also, if these gas deposits are so important to energy security, why export that security? The business doofs are being given the means of running the whole planet right into oblivion in search of short-term profit. Please put a hold on this nonsense.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John MacDaniel

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The contention that "fracking" increases American energy independence is belied by the fact that overseas prices are much higher than domestic markets will bear. This means that corporations' fiduciary responsibility to major shareholders is to EXPORT FOR MAXIMUM PROFIT rather than increasing domestic supply and reducing prices at home. Building export terminals (with TAXPAYER SUBSIDIES, no less) assures that this is exactly what will happen. My children and I need you to be smarter than this, and to represent OUR interests over corporate profits, particularly since energy corporations pay LITTLE IF ANY taxes!!

Sincerely,

Ralph Munn

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dawn Star

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to communities, ecosystems and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Do not do what your conscience opposes, or else you must stand ashamed before God, and we, your brothers and sisters, love you and do not wish such an experience on you. I know this from painful personal experience. So if your conscience directs you to, stand firm against the fossil fuel industry and deny all applications to export natural gas; Almighty God will support you and so will we.

Sincerely,

John Edminster

RE: 2012 LNG Export Study

To Whom it May Concern:

IF we are going to allow any increased fracking in our country, despite the evidence that it has proven harmful to air, water and living creatures, then the gas can be used in our country, thereby decreasing the need for importing oil. Until it has been shown that all the needs in our country have been met, then no increase in fracking should be permitted. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christine Gallo
230 Navajo Rd
Pittsburgh, PA 15241

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

I am appalled that you are even considering permitting the 16 pending applications to ship fracked natural gas overseas. Americans already are suffering the consequences of fracking in their backyards. People are getting very sick, some are even dying. Animals, including cattle, are dying. Children are being exposed to high levels of endocrine disrupters. How can you allow even more gas to be fracked? Also, allowing the export of our domestic natural gas exposes us to the international prices of natural gas. Domestically gas costs about \$2-\$3 a unit, while internationally it is \$10-\$15. Increasing our domestic prices will create incentives for domestic industries to burn more coal. With the greatest drought since the dust bowl, super storms like Hurricane Sandy, now 5/6 of all Americans believe climate change is real. Increase your popularity with your constituents by supporting programs that increase sustainable energy sources, not fossil fuel sources. Studies show that since methane leaks from pipeline distribution systems, as well as compressor stations, frack sites, vented drinking water wells, fracking actually creates more greenhouse gas emissions than does coal. Methane remains in the atmosphere about 20 years, and so fracking is dirtier than coal. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Bad enough that this Administration supports fracking of any kind, but at least the government could encourage energy companies to keep that energy in the US. This Administration should stand up to the fossil fuel industry: deny all applications to export natural gas. Fracking is a toxic threat to American communities and the climate.

Sincerely,

Sandy Lake
1708 Beechwood Ave
Nashville, TN 37212

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dan Lehr

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Deborah Lanni

Stand up to the fossil fuel industry and deny all applications to export natural gas. EEEEEEEEEK! This is terrible news, just when President Obama is prepared to start working on global climate change. This has the probability of increasing horrendously the CO2 already in the atmosphere. And we are either at or just past the tipping point when Methane Clathrate in the northern permafrost will be released. And increased fracking will release more – humongously more – methane. WE DON'T WANT THAT, WE DON'T WANT THAT, WE DON'T WANT THAT!!!! (i'm aware of the MIT report, but also other reports which say the released methane IS serious) We already release way too much methane from rice farming, cattle farming, oil well out-gassing and more. NO MORE NEW SOURCES OF METHANE PLEASE!!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rita Johnson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dianna McNair

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Layne Scarselletta
25 S West End Ave
Lancaster, PA 17603

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elizabeth larkin
5417 N 78th St
Scottsdale, AZ 85250

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kate Geer

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

I don't buy all of the things that say that fracking is "safe" and that reports of water contamination are "inconclusive". The truth is, we are taking risks with the LIVES of people, primarily CHILDREN, for profit. We have done that enough in this country. It is time for us to take a moral stand. My relatives are now starting to "mysteriously" get cancer since the gov't bought areas of their land to mine natural gas. "Nobody knows" exactly why this is happening, yet all of the cases were sudden onset. Other cases have popped up everywhere in fracking zones but yet we still want to play around and say "there's no evidence." If it looks like a duck, and quacks like a duck, then doggone it, IT IS A DUCK. We are smart enough in this country to develop NON-LETHAL MEANS of acquiring natural resources. STOP FRACKING NOW.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Glenn Choy

RE: 2012 LNG Export Study

To Whom it May Concern:

Why are we going to be stuck with the toxins and the gas companies get all the profits? I thought the idea of gas fracking was to make us energy independent. This idea of exporting fracked gas is ridiculous. The gas companies in my state, Ohio, have gotten sweetheart deals from the government when it comes to taxes and regulations. This all happened because of the promise for abundant fuel for our country - not another country. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. All the earth's ecosystems are in danger of collapse from human activity. What we do to the earth, we do to ourselves. Clean air, water, and land are real wealth: an economy based on the destruction of our earth will destroy our wealth and be the cause of our demise. Natural gas is not a bridge fuel: it's a cliff. It's time to say no to fossil fuels and yes to clean, renewable energies like solar and wind.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dona Hoagland
40 Duck Hawk Ct
Hackettstown, NJ 07840

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is damaging to public health and our environment. If the Earth and the life forms on it are to survive, governments must be more responsible in their management of substances, "resources". Our government and its policies seem intent on compounding dangers rather than reducing them. It should be their task to protect us not endanger us. The short term gain to a few industrialists is not worth the long term damage to the rest of the population and precious water, air and soil resources. The idea that our government would approve and permit the is outrageous. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Wasn't the rationale for justifying fracking (despite the insufficiently researched environmental issues) that it was supposed to reduce our dependence on imported fuels? Permitting export of fracked gas shows the grossest contempt for the communities and natural resources that have been adversely affected by fracking.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Deborah Thompson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. The expansion of pipelines and terminal infrastructure is intended for long term IMPORTS because A) the economically recoverable reserves due to shale fracking claimed by the gas industry have been demonstrated to be fraudulent, and B) There is nowhere near sufficient North American natural gas reserves to supply existing (and growing) demand for home heating, electricity generation, etc., and simultaneously supply the vast quantities needed to fully develop the Canadian tar sands project. Thus, it is evident that the public is being deceived, AGAIN. The Gas industry fully intends to IMPORT natural gas through this network in order to expand their ill conceived bitumen mining operation in Canada, with the end product intended for export to Europe and China. It is an outrage that the DOE is participating with private energy corporations in this subterfuge. This must not be allowed to happen!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Guy Beaudoin
523 N Commonwealth Ave
Los Angeles, CA 90004

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Beverly Barry
2710 Avalon St.
Jefferson, LA 70121

RE: 2012 LNG Export Study

To Whom it May Concern:

I believe any fossil fuel (natural gas and oil) drilled or fracked in the United States or passed through our borders must stay in this country. If we prohibited the energy companies from exporting these energy products (without a huge surcharge), we would drastically reduce our need for foreign oil, help the environment and protect our precious resources. People do not understand how much is shipped out.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking threatens the health and well being of American communities and the environment. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Do not cave in to the excessive demands of the fossil fuel industry and deny all applications to export natural gas. This may seem like a boon to our economy in the short run, though even that is highly questionable considering the serious degradation of the environment including the enormous amounts of scarce water that is polluted and permanently wasted in this process as well as the harm done to people's health. It will surely be detrimental to the overall health - economic and social - of the nation and the world in the long run.

RE: 2012 LNG Export Study

To Whom it May Concern:

Currently natural gas prices are low, so the industry is in a rush to move Marcellous shale gas to terminals for liquifixation and ultimately export, which will boost the domestic price of gas. Futhermore, fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to foreign markets. Well until the realization that shale gas exists throughout the world, and once the technology is deployed reachable by almost any nation. In Pennsylvania communities have had the land destroyed, and while some have profited, many have lost their homes and life's savings as a result of the industry plunder. These sacrifices might be a worthy trade off, if it were for reducing our nation's dependence on foreign energy or offset by a reduction in carbon emissions. But in fact only the gas industry stands to gain by manipulating demand and driving up costs to US consumers. Stand up to the fossil fuel industry and deny applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please stand up to the fossil fuel industry and deny all applications to export natural gas. Stand up for the health of our water, ourselves, and the earth!

Sincerely,

Dotty Caldwell

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Hernandez
3708 Sunbrook Rd
Madison, WI 53704

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jason Litzow
1380 W. Main St. Apt #115
Whitewater, WI 53190

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Walker

RE: 2012 LNG Export Study

To Whom it May Concern:

The natural gas industry is advertising that the abundance of gas here at home will help us to be energy independent. It make no sense, in this context of energy independence, to build facilities to export the gas. Either the industry is being patriotic and helping the U.S. economy, or it is lying to the American public and is only interested in large profits. It can't be both ways. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Denene Roberts

RE: 2012 LNG Export Study

To Whom it May Concern:

I worked for the oil and gas industry in the 80s, when all this fracking and flooding started. They knew then and know now it's not healthy for people or the planet. Shame on you for allowing yourself to be bought by an industry with record profits and record tax breaks, giveaways, etc. No wonder people don't believe in the government, government integrity and or your ability to do the people's business for the people. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We can't continue down this road of destruction of the planet. We shouldn't be fracking for a million reasons! We have to move away from fossil fuels so we shouldn't be ruining our water supply in order to get at something we shouldn't be using! Follow Germany's lead in going to green. Start with public education in the schools so it can trickle up to parents. Show Chasing Ice to everyone in the country so they "get it." There isn't much time left. We can't focus on debt or even how long Social Security will last if the planet will die first and there will be no humans able to live in the harsh conditions.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. While it is a given that fossil fuels will be a part of the equation for American energy for the near term - until Americans flex their entrepreneurial muscles and capitalize on renewables that are so abundant - fracking is severely damaging to our environment and the climate. Allowing the export of fracked gas would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Amy Richardson

RE: 2012 LNG Export Study

To Whom it May Concern:

We banned the use of 2,4-D and other pesticides in the US, but allowed corporations to continue manufacturing them so their workers could get sick and people in other countries could too. Ditto with recognizing the health implications of tobacco smoking - we encourage Americans to stop smoking, but support American cigarette makers who export their product worldwide. After all, who cares about a bunch of Asian teenagers anyway? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Then it will be someone else's fault when greenhouse gas emissions keep climbing. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janet Matthews

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

George Crary
6815 Sw Capitol Hill Rd 14

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities, agriculture, water, air, and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. President Obama – you need to clearly understand this – you allowing fracked gas exports = YOU taking a big step toward making global warming happen faster, and causing higher natural gas prices for Americans here at home. If you really want to tackle climate change, the very least you can do is reject permits to export natural gas!

Sincerely,

M. Kramer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Irfan Refai

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This method of extraction not only forever ruins and wastes our precious water, but also renders it unusable, does not return it to the water cycle, and creates tons and tons of extremely toxic waste. It also releases potent green house gases into the atmosphere and is causing terrible health problems. There is no reason to poison ourselves to line the pockets of this industry. Invest in solar and wind, and keep the gas in the ground!

Sincerely,

Annette Gurdo

RE: 2012 LNG Export Study

To Whom it May Concern:

Whatever the reason that we may need to use fracking as a temporary short term transitional step to cleaner energy like solar and wind in our own country, it is just that, transitional - not an end in itself. We don't do ourselves or the world any favors by over developing this here for export, rather than as a temporary step to meet our own needs and reduce our dependency on oil. As it is, fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kathy Glasser
