Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Trevor Williamson

RE: 2012 LNG Export Study

To Whom it May Concern:

I live in upstate New York, a beautiful area, and I don't want to see it ruined so gas companies can make money. If a company makes money, it is to give their employees and stockholders a better way of life. But, why should an improvement in their way of life come at the expense of the way of life of the people where I live? And, we have an energy problem in this country. Why would we want to export energy to other countries? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tobias Fritz
3109 W. 71 St.
Prairie Village, KS 66208

U.S. Department of Energy

To Whom it May Concern:

prolonging dependence on harmful sources of energy delays transition to cleaner technologies that are available now, and is the wrong path to future development. we don't need to wring the last drop of fuels that have taken nature orders of magnitude longer to produce than the rate at which we are consuming them, and consuming them with dire consequences to the health and well being of all living creatures, humans included. nor to continue to develop ever dirtier and more desperate means of extracting them.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gary Henson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This issue is close to me because I grew up in Northeastern Pennsylvania, and my parents still live there. This area is part of the Marcellus shale formation, and various natural gas companies have been competing to secure leases for drilling on my parents' land and that of their neighbors. A nearby community has already suffered the ill effects of fracking, including contaminated and flammable water. Instead of investing more time, effort, and money in yet more non-renewable resources, why not devote our research efforts to developing renewable sources like wind, hydro, and solar power on a large scale?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kate Blascovich
5328 Lexington Dr
Parrish, FL 34219

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sharon Lee
3604 Canadian Pkwy
Fort Collins, CO 80524

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Nauaman

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kelly Wieber

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Uly Silkey

RE: 2012 LNG Export Study

To Whom it May Concern:

Why should we export any of our resources to other countries? The corporate world sees only profits and sales, no matter how precious our wood, oil, gas, and minerals are to us. We must save all these resources until we need them ourselves. Stop all exports now.

Sincerely,

Carol Price

RE: 2012 LNG Export Study

To Whom it May Concern:

Regulate fracking by the fossil fuel industry and ensure that their behavior supports the nation's long term interests rather than short term corporate profits. Unregulated fracking is a toxic threat to American communities and especially to our climate. Fracked gas exports make no sense except as a convenience for the oil industry in the shortest term. Permitting export would dramatically increase the scale of and demand for fracking in the United States by and compromising national control of the American peoples birthright in favor of the fossil fuel industry who would squander our national interests in the huge foreign markets.

RE: 2012 LNG Export Study

To Whom it May Concern:

Please, protect local communities from the destruction caused by fracking. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports, for the profit of a few, would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lee Gaffner
5581 Queen Victoria Ct.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracking for domestic use is bad enough but allowing it for the ability to export gas while threatening our nations water and health is deplorable! Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Freddie williams

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Heidi Dillon

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Colleen gregory

RE: 2012 LNG Export Study

To Whom it May Concern:

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Douglas Friday

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Ramer

RE: 2012 LNG Export Study

To Whom it May Concern:

It makes no sense to allow our natural gas or other fossil fuels to be exported. We have an energy problem of our own right here at home. Moreover, exporting our fossil fuels will allow them to be burned that much more quickly, drastically increasing global warming. We must slow down and save some for the future. The fossil fuel industry is already raking in enough profits from our common natural resources. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is not a policy that should procede because we do not need to destroy our public and private lands just to enrich the oil and gas companies. This is not the direction we should go. Detroy OUR environment for the benefit of other countries. For once show some sense and care for OUR ENVIRONMENT and our future. This is dangerous drilling and should actually be stopped and not expanded at all.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lewis Szymanski
6854 Sweeter Rd.
Twin Lake, MI 49457

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

If we sell gas on the international market we lose the benefit of cheap local fuel. I'm alarmed at the increase in methane leakage at fracking sites. Methane is 42 times worse than CO₂ as a greenhouse gas. Put our best scientists on seeing if there's a correlation between temp surges and more methane.

Sincerely,

Debra Trudeau

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. How would this make us more energy independent? Don't give the fossil fuel industry permission to continue their destruction of our planet. Their goal is to increase profits no matter the cost to our health and environment. Their greed drives them - it's time for you to take a stand to protect our health and stop the destruction of our planet before it's too late. It can't continue to be profits at any cost, we need an energy policy focused on renewable clean energy. I am so disgusted with large corporations running this country for their own selfish gains. A democracy is not ruled by corporations and the very wealthy, but we the people seem to be invisible and disregarded by them. Where's the change, the hope?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. This would be devastating for communities all over the US. We have already seen enough of the pollution, health problems and environmental damage caused by fracking. Fracking also releases methane and other gases into the atmosphere, which will only add to climate change and the kinds of extreme weather problems we have seen with Hurricane Katrina, Superstorm Sandy, tornadoes everywhere, etc. Scientists have been warning that allowing fracking and such projects as the Keystone pipeline will mean there is no chance of preventing even worse climate change than we have already seen. The American public, and people worldwide, know this intuitively, and we are tired of using dirty fossil fuels. We want resources and effort spent in converting to clean, alternative energy sources like solar, wind, tidal and geothermal. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rose Marie Wilson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Zee Kallah
5001 N. 11th Ave.
Phoenix, AZ 85013

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Clare Mannino
38 Larkspur
Palmetto, FL 34221

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking degrades the environment for dubious ends. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports will dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry. Deny all applications to export natural gas.

Sincerely,

James Nicholl

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is bad enough that the gas industry is rationalizing fracking with the flimsy excuse that it improves our national security. That they propose exporting that gas not only puts the lie to their initial excuse, it shows us that profit for them trumps both our health and safety and national security! How much more do you need to see ?

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dan Goodwin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Also, if you're trying to grow the economy, this is counterproductive. Fuel prices are currently lower in part due to the impact of a inexpensive domestic natural gas market. Exporting that product would drive the price up domestically and restart the price gouging that our middle class families are just beginning to recover from. Fracked gas exportation is bad business both economically and environmentally. I urge you to say no to this initiative.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jayne Ash

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do not allow the export of fracked gas. High Volume Hydraulic Fracking is a highly toxic process that pollutes the air, ground water, lakes and rivers. Allowing its export will dramatically increase the demand and scale of fracking in the United States. Please don't let US citizens become the lab rats for meeting the energy needs of foreign countries. Its time to take a stand against the CEO's of fossil fuel industries who through neglect and greed have been a major contributor of wide scale pollution of our air and water in this country. Don't pad their coffers at the expense of the American people.

RE: 2012 LNG Export Study

To Whom it May Concern:

Though it is tempting to think of natural gas as somehow cleaner, and better because it isn't imported, it is actually a very harmful form of energy that should NOT be pursued. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Not long ago, one excuse for racing into natural gas exploitation was the fact that it was a resource local to the US. Now, apparently, keeping the resource for US use is not as important as allowing the fossil fuel industry to make huge profits exporting it while ruining our climate and our home environment.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pete And Paula Golden

Double Bridge Rd

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gerry Hurley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rae Combs

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elyse Coulson
301 Jamestown Dr
Winter Park, FL 32792

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Dear Mr President, I was so glad to hear your frequent positive statements about climate change during your inauguration yesterday! But you seem to be making a devil's bargain to tout "clean" natural gas as a bargaining chip to place stricter rules on the coal industry - which ARE needed. However, there is no remediation for the pollution of the air and water of our country from coast to coast that will happen with hydrofracking. And to ship it off shore? Who's making a killing here? And whose lands and lives will be ruined during this boondoggle?

Sincerely,

David Bruner

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Rybski

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. President Obama, I voted for you for I expected you to return to your former comments to protect the environment and health of the citizens who now see you in the position to stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking has nothing positive to add to any lifestyle, anywhere in the world. Just because there is gas to be forced out of the ground is no reason to take it out, much less, ship it out of this country. If done, it will do little else than line the pockets of the administrators of the industry. What it will do is add to visual environmental decay, eventually ruin the very limited water supply, and create surface issues yet to be known. There is so little understood as to the eventual long term outcomes for the earth, for the atmosphere, for life itself. I am very pleased that so many intelligent young people are aware of the impact this huge irresponsible industry will have on their lives, much less children now and those who will follow. I live in the Finger Lakes of New York State in Marcellus Shale country. Most of the farms in the area do not support such interruption. Many are struggling to keep the land healthy and the water pure, so there will be something left for future farms and corn and grain, produce, meat, eggs, dairy and fresh food in general. This area is designated as part of Scenic New York. There is significant industry for vacationing, hiking, swimming, fishing, boating, sailing, and bicycle adventures. In the winter there is great ski and snow boarding to be found. In the autumn there is hunting, visiting the gorges, colleges, and hiking, etc, as well as the many wine, the beautiful vineyards and apple orchards that dot and cover the steep and rolling hills, along with the many farms. The cities, towns and villages offer antiquing, arts and entertainment, along with good food. There is so much that will affect everything that is quiet, healthy, productive and a great place to visit, live and raise and educate children. There are many universities, colleges and other institutions of higher learning and training. Come, Come and See for yourself what could be lost and never replaced. Sincerely, Patricia M. Bechtold north of Ithaca, New York ladymacbech@gmail.com

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is not an energy efficient way of "mining" energy, using up vital and precious resources, especially water. It creates toxic liquid waste that has to be stored underground, and the future consequences of this process are only beginning to be known. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lois Fornander

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Clune

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bruce Hawes

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. And stand up for life on Earth and a future for our devastated planet by banning ALL fracking in the U.S., and ALL fossil fuel use. We can be off it all within 4-5 years (and employ everyone who can work in the process). Tomorrow is Martin Luther King, Jr. Day, and I think he'd agree that this would be the most important legacy you could leave the U.S. and the world as president of this country.

Sincerely,

Carol Halberstadt

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This would also be even more devastating to our property values here at home. Peoples investments in their homes are being diminished by the changes from rural America to industrial America. I myself would now be upgrading and investing in a rural home if not for the threat of the oil and gas industry. Just as people whom have already invested their life savings into rural America just to have the value stolen by this dirty industry. Also the domestic prices would rise putting undue strain on the American people who have already been affected negatively by the industry. Climate is another down side to this industry. The gas that is escaping into our atmosphere already has made a dramatic change in average temperatures globally. THIS NEEDS TO END. Energy neds to move in a more environmentally and sustainable manner. God save those of you who cannot or will not consider the outcome of your actions. As WE ALL have to try and live with the consequenses.

RE: 2012 LNG Export Study

To Whom it May Concern:

It has yet to be shown how hydraulic fracturing operations can neutralize the large amounts of methane gas that leaks from the ground when extracting natural gas. As methane is one of the most potent greenhouse gases we know of, I find it hard it difficult to believe that anyone who would open up new markets for fracked gas sincerely wishes to take a stand against climate change. Please, take this opportunity to show that the U.S. wants be a world leader in the global fight against climate change, and that our position as such will not be compromised by the promise of new revenue from fracking gas extractors.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The United States should not just reject the notion of exporting fracked gas, it MUST reject fracking altogether! The world needs to look to the US to set a GOOD example. What is being proposed is not in the interests of turning away from fossil fuels. It may be one way to make \$\$ for our economy, but at a price that is devastating to the soil, air, wildlife and climate. Shipping fracked oil from here is just as bad an idea as making money from Canada for the Tar Sands pipeline, the oil being transported through farmland and over aquifers, and just an accident waiting to happen. Fossil fuels are passe. Climate change is already here because of the use of petroleum, and solutions are not drilling for more, but finding other means of generating power. What fracking does to the land, air and wildlife is undeniable. The plan to export this gas, is unconscionable. Sure, it would be a source of revenue, but the 'cost' is more than this world can afford. It isn't just that we need to oppose permits to export the gas from fracking, we need to oppose 'fracking' altogether. The world needs to shift from fossil fuels. The US must to do its' part by not allowing fossil-fuel companies to destroy the future of our land, health, and the future, all in the name of the almighty dollar. Kokua Mr. President! U'a ma'u ke i'a o ka aina i ka pono! "The life of the land is preserved in rightceousness." Please stand up to the fracking industry! Don't allow fossil-fuel companies to export fracked gas, don't allow fracking at all! We must do what we can to save this planet from greedy companies who do not care what the becomes from the consequences of their action. I respectfully ask that you stand up to the fossil-fuel industry, and don't allow these companies to continue to mess with Mother Nature. Mahalo!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Charles Hall
6480 Reservoir Road
Hamilton, NY 13346

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It was my impression that the fracking industry and current climate of letting the industry produce more was all about U.S. energy independence - this is precisely the opposite. PLEASE STOP THIS. Thank you, Carol Covert & sons

RE: 2012 LNG Export Study

To Whom it May Concern:

Originally natural gas development was to make our country 'energy independent'. Let the profits from what is produced provide movement to sustainable energy development to truly make this country energy independent. At the time that is in place, we can safely consider shipping our energy to other countries. I am reminded of the Irish who grew crops and starved, while the Irish grown food was shipped to England. Natural resources need to benefit their own countries. Sustainability is what every country needs. If we were shipping the technology for sustainable energy, I would support and applaud. If we are selling our natural resources for profit for the few, I STRONGLY oppose this venture. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Howard Raab
Po Box 173
Arkville, NY 12406

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roger surprenant
12 Cozy Bluff Road
Savannah, GA 31410

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Helen And Calvin Zika and Varner

1195 Piper Rd

Mansfield, OH 44905

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Water may be the dilemma of this century. Fracking takes huge quantities of water and then pollutes it. It may change groundwater pathways. Water is the bottom line for human and all other life. We are messing with an extreme technology that is dangerous to us. Please stand up for the common good.

Sincerely,

Ainslie Gilligan
25 Strand Ave

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris D'Agnolo

RE: 2012 LNG Export Study

To Whom it May Concern:

Natural gas, petroleum and other natural energy resources belong to the American people and should be conserved for use BY the citizens of this country. Those resources are essential to the long and short term security of the United States. In 1977 the DOE was created in response to the oil shortage crisis of 1973. A primary objective was to reduce U.S. dependency on foreign oil. Our natural resources are an a critical part of our national security. They are not available to create profits for any individual nor business by selling them out of the U.S. Additionally, fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If you don't clearly see this then you are by definition unqualified to hold the office you were elected to and should step down immediately. I think it would be fair to say you have failed to uphold your oath to defend and protect the Constitution of our country at worst, and are not looking out for the best interests of those you represent, at best.

Sincerely,

Terry Obrien

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Matthew Crawford

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rebecca Helton

RE: 2012 LNG Export Study

To Whom it May Concern:

There are now enough incidences of leaks into groundwater and leaching through soil, in addition to the link to ground instability causing tremors, and the devaluation and an inability of neighboring properties to qualify for mortgages, on top of the the noise and light pollution that affects neighbors to now justify calling fracking a failed experiment. Energy does drive the economy, however, cost must be balanced: fracking is a short term solution with a cost that will affect generations of Americans. Invest in solar options for long term, sustainable energy: solar towers and farms already exist. Funding edicted research with awards for winning designs will spur innovation—the very thing that made America great!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Feagan
625 Meadowridge Lane
Kirkwood, MO 63122

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Hubbard

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is time for the DOE and the President's environmental and economic leaders to address the total picture and then be fully honest with the American people about the full impact of "fracking" and other methods of extracting natural gas—or any other "mined" fuel for that matter. Exporting can be a good thing, if it does not adversely effect the American people to secure the product for export. On the surface (no pun intended), this push by corporations for fracking without all the facts being fully presented to the American people is beginning to look like the US is being considered just another 3rd world territory where people don't count, just the corporate profit. Hopefully that isn't true and the Obama administration will prove it by not allowing the DOE to move forward on this matter until a more thorough investigation on safety and environmental impact have been publically discussed and the People's voice has been heard. Thank you for your consideration.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Forster

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Just the amount of water needed for fracking hurts our climate, then add in the chemicals and people having more allergies, cancer and some even having their houses burn down and fire coming out of their faucets is enough to make us all sick! Please, NO NO NO to fracking PERIOD. Let's move on to green energy.

Sincerely,

Rebecca Stewart

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michelle Wilson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities, the climate, and health (toxic chemicals into aquifers.) In addition it DELAYS and DEFLECTS from sustainable, safer energy sources (sunlight and wind will be with us, natural gas won't and perpetuates no development of vehicles/methods of using sustainable energies). Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Focus energy, media, articles, researchers on sustainable, job-creating alternatives that would be healthier. Don't sell out children 2-7 generations ahead. Offer those who want to do fracking tax incentives if they do non-fossil fuel sustainable energy and deny all applications to export natural gas. Towns like this in Germany have so much extra solar energy they fund the municipality through selling it. [German Village Produces 321% More Energy Than It Needs! (From Inhabit)]That should be the model. A President's insistence on CLEAN COMMUNITIES and CLEAN JOBS as a focus can change political campaigns as well as local business sustainability.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Julie Nuss

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Allshouse

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. When we are trying to save energy for our own use to avoid having to import oil, what in the world are you and congress thinking relative to exporting any kind of fuels? In the big picture, we need to be conserving our fuels and certainly not fracking. Fracturing bedrock to get to more fuel supplies is so dangerous on several levels. Please research yourself and do not depend on those who will make millions to advise you - like the wolf guarding the hen-house. We have enough problem with our polluted ground water without complicating the problem further through fracking. I used to be an independent mineral, oil and gas operator and I know what I am talking about. I always refused to do most fracking or drilling offshore in areas like the Pacific where there are fault lines everywhere that can break open and leak oil like it did once near the shores of Santa Barbara, California. I supported you and Now I am begging you to not become a part of our fascist system that we now have. I was looking to you to not be a party to that, and a pawn for the large energy corporations.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Geraldine Hartley
5741 Ostrom Ave
Encino, CA 91316

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brendan Dagan

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Denise Reilly

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a energy option that is not without significant risk and potential for damage to the environment. "Energy Independence" is often cited by fracking companies as an incentive to landowners to sign leases. What they do NOT tell landowners is that much of the effort for fracking, as well as the energy produced, is under foreign contract! While I can understand the need for energy independence, I DO NOT SUPPORT EXPORT OF THIS RESOURCE.

Sincerely,

Kathryn McClure

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please, don't let the lure of Gas and Oil profits sway this issue! Fracking in itself is dangerous and poses huge domestic environmental problems. We will be cleaning up after this mess for years. Exporting will bring on its own environmental havoc. We have got to put the health of the Earth ahead of profits. We can not survive at the rate we are abusing the Eart.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Adam Gross

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Herb Schorrak
661 Trailsway Lane
Neenah, WI 54956

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Scott Owen

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Vance Blosser

To Whom it May Concern:

NO! NO! NO! Fracking has not been proven to be environmentally safe. Far from it! There have been far too many 'accidents' where the process of fracking has been permitted. It poisons our water and the gases emitted increase climate change. Now, they want to export the fracked gas!!! That means more pollution for processing. If exporting is permitted, any benefits to the USA would be lost. Prices would rise and the fracked gas would go to the highest bidder. The only winners would be, as usual, the big oil corporations - for whom 'the bottom line' is all that counts. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Matt Pearson
904 N Walnut St

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sam Heppell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please recognize, that if you do fail to prevent exports of fracked gas, the practice will expand, more communities will be leveraged and more water will be contaminated. Of the MILLIONS of gallons of water required in the fracking process, only about 10% is recovered and treated. Millions of gallons of poison left to contaminate farms, water supplies and people. It is bad enough the practice exists at all - do not expand the market place.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Many studies show that if we burn the fossil fuels already extracted, we will cause the mean temperature of the earth to rise to an unprecedented level and will alter the earth to an uninhabitable extent for many species and very probably humans. Please devoted your considerable influence to renewable energy sources. At the very least, all fracked gas should remain in the United States to reduce our dependence on foreign sources of energy. The oil and gas industries do not need to exploit US citizens for profit any more than they already are.

Sincerely,

Sandra Speicher

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Furthermore, I live in California, an earthquake state. It's my personal opinion that fracking in earthquake prone states is extremely dangerous. Why would we be exporting fracked gas when we supposedly we are experiencing an energy shortage ourselves? It's hard to believe that this is not promoted by big industry against the people's best interests, as another profit-raising tactic. When will we get our Congress back out of the hands of the greedy? Didn't the last election give Government officials a HINT as to what Americans are fed up with?

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gabriela Sweet

RE: 2012 LNG Export Study

To Whom it May Concern:

I understand the demand for increasing US energy independence, and despite the real need for greener energy alternatives to be developed instead as quickly as possible, some carefully monitored and regulated fracking might be unavoidable to address our short term needs. Allowing this environmentally dangerous practice to put our own people and ecosystems at risk however, just to then export it to other nations, is unacceptable. If the US was a desperate developing nation with no other economic alternatives, exporting fracked fossil fuels when there's a high demand for them domestically, would still be a bad idea, and hopefully we're a stronger nation than that. Please think long term when making these critical choices for our country and our planet. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Wallace

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Gunther

RE: 2012 LNG Export Study

To Whom it May Concern:

January 16, 2013 Mr. B Obama please reject fracked gas exports. In 1988 I received my University money from a natural gas company in Southern California. Years later I left the United States of America without a finished degree because I was constantly at war with the people and person managing my University money. I left because of our extremely changing environment whether it was the climate, toxic plastic, food or water. Anything that is derived from Petroleum, one being natural gas, is a threat to human health. I left because of their, the Petroleum Industries, greed, ignorance and unworldly wisdom which is not wisdom at all. Those who profit the most care the least of our climate change and environment which I know from firsthand experience. I know your Poly Sci Secret Mr. B Obama now do good! MOLERAT Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Wahl

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We do NOT achieve energy independence by inefficient exporting of our cleaner energy resources like natural gas. The fracking process has many issues directly/adversely affecting nearby homeowners and communities that ABSOLUTELY MUST BE ADDRESSED FIRST BEFORE BLINDLY PLUNGING AHEAD WITH THIS TECHNOLOGY. Recent problems in Northeastern Ohio show that the blind commitment expressed by Gov. John Kasich is NOT the way to carry out energy production.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dave Pashman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Water is becoming a very scarce, but important necessity. With severe droughts in the central and south west part of our country, we CANNOT afford to use it, loaded with chemicals to gain some energy for a few. There is solar, wind, and hydro that is cheaper and better for the environment. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please have the COURAGE to stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Kepner

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tiffany VanderZanden

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Virginia Schuetz
Settlers Village Circle
Cranberry, PA 16066

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dj Myers

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Deborah Gelep

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter Liberty

RE: 2012 LNG Export Study

To Whom it May Concern:

As members of our great American government making determinations on fracking, you are also an important role-player as steward of our beautiful planet. Choose to protect it and our people by insisting on renewable energy sources and banning toxic, destructive practices like fracking. Tens of millions of gallons of water and toxic chemical cocktails being pumped into our earth –is diametrically opposed to providing citizens with water to meet their needs. Water is a gift of life and our south, central states still suffer extraordinary drought- how can we allow necessary water for crops and human life to be pumped underground! It boggles the mind. Take responsible stewardship and do not allow and/or promote fracking. You have a legacy.

Sincerely,

Christina fernandez

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Halley

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

J Dobrovic

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joanne Arntsen
1517-2 Village Dr.
Wilmington, NC 28401

U.S. Department of Energy

To Whom it May Concern:

Fracking probably can be done with little impact on the environment, but so far, there is no incentive for the industry to see to it that they are accomplishing this. Until regulations are in place to safeguard our environment, it is short-sighted to permit this outlet for a product obtained at severe environmental cost. Look at all the factors involved, from the origin of the gas to its shipment to terminals, before allowing this exportation. Further, it would be better to convert American coal-fired power stations to natural gas, thus reducing their dangerous emissions.
