

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steve Askew  
1099 Plunkton Rd  
Warren, VT 05674

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rose Hughes  
1155 Ford Road  
Minneapolis, MN 55426

RE: 2012 LNG Export Study

To Whom it May Concern:

I am strongly opposed to fracking. It yields greenhouse gases, and uses precious water supplies. The report cannot be a fair and objective analysis. I have been following fracking for years, and am well read on the topic. Fracking is a bad idea. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Wenze

RE: 2012 LNG Export Study  
To Whom it May Concern:

The following article is a perfect example of the lack of governmental concern over the government's collusion with offending businesses: "EPA changed course after oil company 27, 2012 photo, a well vent burns as water flows from Steve Lipsky's well outside his farm in Fannin County near Weatherford, Texas. The U.S. Environmental Protection Agency had evidence that Range Resources' operation contaminated Lipsky's drinking water with explosive methane, and possibly carbon dioxide, but then withdrew its enforcement action, leaving the family with no useable water supply, according to a report obtained by The Associated Press. The EPA's decision to roll back its initial claim that hydraulic fracturing operations had contaminated the water is the latest case in which the federal agency has changed its position on water contamination and then softened its position, drawing criticism from Republicans and environmentalists who insisted they proved the agency was inefficient and too quick to draw conclusions. (AP Photo/Chris Wedel) PLUSHNICK-MASTI From Associated Press January 16, 2013 9:23 AM EST WEATHERFORD, Texas (AP) — A man in a Fort Worth suburb reported his family's drinking water had begun "bubbling" last month, and the federal government sounded an alarm: An oil company may have tainted their wells while drilling for natural gas. But the U.S. Environmental Protection Agency believed the situation was so serious that it issued a warning in late 2010 that said at least two homeowners were in immediate danger from a well that leaked methane. More than a year later, the agency rescinded its mandate and refused to explain why it changed its report obtained by The Associated Press and interviews with company representatives. The agency cited new scientific evidence against the driller, Range Resources, but changed course after the company agreed to cooperate with a national study into a common form of drilling called hydraulic fracturing. The study, an analysis that concluded the drilling could have been to blame for the contamination, was released last month. EPA decision seemed to ignore the dangers of his well, which he says contains so much methane that it can be ignited from the water in a garden hose attached to the well head can be ignited. "I just can't believe it," Lipsky said. "I knows the truth about something like that, or has evidence like this, wouldn't use it," said Lipsky. He has to have to abandon his dream home in an upscale neighborhood of Weatherford. The case has become a national EPA initially linked a hydraulic fracturing operation to water contamination and then changed its mind. The industry protested. A similar dispute unfolded in west-central Wyoming in late 2010. After an initial report that showed hydraulic fracturing could have contaminated groundwater, Range Resources' leaders went on the attack, the agency said it had decided to do more testing. It has not reached a conclusion. Hydraulic fracturing often called "fracking" allows drillers to tap into oil and gas reserves once considered out of reach because they were locked in deep layers of rock. The practice has led to a surge in natural gas drilling nationwide, but environmental activists and some scientists worry it could contaminate groundwater. The industry insists the practice is safe. Range Resources, a leading independent oil and gas boom, has hundreds of gas wells throughout Texas, Pennsylvania and other mineral-rich states. Among them is a production site now owned by Legend Natural Gas in a wooded area near Lipsky's home in Weatherford, about a half-hour drive west of Fort Worth. State agencies have not said if air pollution, so the EPA's involvement in the Texas matter was unusual from the start. The EPA received complaints about the methane in December 2010, because it said the Texas Railroad Commission, which regulates oil and gas drilling, had not responded quickly enough to the reports of bubbling water. Gov. Rick Warren said two families, including the Lipskys, were in danger from methane and cancer-causing benzene. He ordered Range Resources to take steps to clean their water wells and provide affected homeowners with bottled water. Range Resources stopped doing that after state regulators declared in March 2011 that Range Resources' drilling was safe. The dispute between the EPA and the company then moved into federal court. Believing the case would be a lengthy legal battle, the EPA asked an independent scientist named Geoffrey Thyne to analyze 32 water wells. In the report obtained by the AP, Thyne concluded from chemical analysis that the drinking water could have originated from Range Resources' nearby drilling operation. Range Resources is seeking industry leaders to participate in a national study into hydraulic fracturing. The study is being led by EPA officials in Washington that so long as the agency continued to pursue a "scientifically based" study, the company in Weatherford, it would not take part in the study and would not allow government inspectors to visit drilling sites, said company attorney David Poole. In March 2012, the EPA retracted its initial claim in court battle and set aside Thyne's report showing that the gas in Lipsky's water was nearly identical to the gas a Plano, Texas-based company was producing. "They said that they would look into it, which they did," Poole said. "I'm proud of them. As an American, I think that's exactly what they should do." The EPA offered no public explanation for its change in thinking, and Lipsky said he and his family were left with a reporter. The agency refused to answer questions about the decision, instead issuing a statement that said resolving the Range Resources matter allowed the EPA to shift its "focus in this case away from Range Resources to a joint effort on the science and safety of energy extraction." Rob Jackson, chairman of the Center for Global Change at Duke University's Nicholas School of the Environment, reviewed Thyne's report and said it was based on good science. He agreed the gas in Lipsky's well could have originated in a rock formation called Strawn shale, the same area where Range Resources was extracting gas. Jackson said it was "probably not a good order and said the EPA "dropped the ball in dropping their investigation." Lipsky, who has been in a legal battle with Range Resources, now pays about \$1,000 a month to haul water to his home. Lipsky said his children become unnerved when their methane detectors go off. Sometime soon, he said, he will have to decide whether to stay in the large stone house or move. "This has been total hell," Lipsky said. "It's taken a huge toll on my family and on our life." The confidential report relied on a type of analysis called isotopic analysis, which produces a unique chemical fingerprint that sometimes allows researchers to determine if gas or oil. Jackson, who studies hydraulic fracturing and specializes in isotopic analysis, said the data is needed to determine for certain where the gas came from. But even if the gas came from Range Resources' drilling could have contributed to the problem in Lipsky's water because gas can migrate. Range Resources insists the gas in Lipsky's water is from natural migration and not drilling. The study indicates the gas came from a different rock formation called Strawn shale and not the one Range Resources is drilling. said. In addition, he said, isotopic analysis cannot be used in this case because the chemical signatures in the two formations is indistinguishable. A Range Resources spokesman also dismissed the study as anti-industry. Range Resources has not shared its data with the EPA or the Railroad Commission. The data is proprietary and could only be seen by Houston-based Weatherford Laboratories, which has analyzed for Range Resources by a Weatherford scientist, Mark McCaffrey, who did not

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gordon Pettey

RE: 2012 LNG Export Study

To Whom it May Concern:

There is no urgent need to rush into this. The earth has been this way for eons and we have enough of this gas. On the other hand, we really do not truly understand the long-term impacts of this business. And our economy needs jobs, infrastructure improvements, and not simply massive profits for energy companies. The EARTH cannot support the continuing burning of carbon. Fracking is a toxic threat to American communities and the climate overall. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Communities are at risk. Communities of people / voters.

RE: 2012 LNG Export Study

To Whom it May Concern:

The Department of Energy has not shown they are able to regulate fracking in a manner that protects the public from the toxic byproducts of the process. There have been too many incidents of ground water being polluted already. Allowing exports will only increase fracking, and thus increase the danger to the U.S. public. This is NOT acceptable.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marcus Pulsipher

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. On a personal note I know friends in both northeastern Utah and northeastern Pennsylvania whose private rural drinking water wells have been contaminated by nearby fracking. In the Utah case a beautiful box canyon no longer can be used for sacred Native American ceremonies because of this toxic pollution. And in my birth-state of Wisconsin—"America's Dairyland"—companies are ripping up valuable farm land to get at the round-grain sand deposited there by the ancient glaciers, the perfect sand grains for use in fracking

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking poses an environmental threat to American communities, and fosters activities which are destroying the broader environment and threatening to further destabilize our climate. One of the major justifications given for expanding this risky practice has been to bring America closer to "energy independence". The natural gas industry is now showing its hand, wanting to expand fracking in order to pursue lucrative export opportunities – not to stabilize the US economy. Allowing fracked gas exports would substantially increase the scale of fracking in North America by giving the fossil fuel industry access to huge foreign markets. This is not in our national interest, and rather serves to provide short-term monetary gain to a small number of Americans at long-term cost to the health of individuals, the strength of communities, and the vitality of our natural environment. I ask you to stand up to the lobbying noise from the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter Kuhlman

Meredyn Pikeerickson  
116 Seabright Ave Apt 6  
Santa Ruz, CA 95062

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wanda Remington  
531 West Potomac St.  
Brunswick, MD 21716

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking will ultimately reduce our fresh water supply and increase the price of water. Frackers should be made to pay a premium for using our fresh water supplies to extract gas and oil from shale. This premium should then go to recycling this precious resource instead of burying it in wells deep under ground for our grandchildren to deal with.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sara Foszcz

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Vermont has imposed a moratorium in order for us to discuss every aspect of gas, wind, etc., a practice you should promote nation-wide. Fracking is just another way to plunder, poison, wreck, exploit and, in the end, hasten the climate catastrophe. Teach Americans all aspects of conservation and pre-empt the corporations who care for nothing but profit, no matter the human lives and creatures big and small it will cost.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Abraham Role  
3960 Antelope Ln  
Jackson, WY 83002

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Why in the world would you rape our land and destroy the health and well-being of our planet and then sell it elsewhere??? We are counting on you President Obama to do what is right for the people, not BIG OIL and profit above everything else!

Sincerely,

Theresa Clark  
15575 Twp. Rd. 453  
Loudonville, OH 44842

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

I've seen what the previous edition of this - reckless, unregulated coal mining - did to northeastern Pennsylvania, including Mr. Biden's hometown. The big companies come in, make a mess in exchange for promises that they won't keep, and then sneak away. They leave the health problems for the residents and the costs of clean-up to the taxpayers. We've been down this path before. Let's skip it and get it right this time.

Sincerely,

Brendan Hickey

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please show integrity, regard for future generations, regard for our planet Earth, and have a shared sense of community responsibility, instead of always caving to profits. Sincerely, Denise Tucker 6104 Flatrock Ln. Austin, Tx. 78735

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ellen Prindle  
217 Cornwall Road  
Warren, CT 06754

Stand up to the fossil fuel industry and deny all applications to export natural gas. There is NO EXCUSE for the endless exportation of DIRTY ENERGY THAT IS DESTROYING THE PLANET IN THE US. The aquifers are being destroyed beneath all of these pristine states (West Virginia, Pennsylvania, Ohio), the air is being fouled with air pollution, and the toxicity of these operations causing CANCER in all of the residents of these states.... I VOTED FOR YOU BARACK OBAMA AND DONATED LARGE SUMS OF MONEY TO HELP ENSURE THAT THE PLANET WOULD BE HONORED UNDER YOUR LEADERSHIP! YOU CAN REBUILD OUR INFRASTRUCTURE, END THE FOREIGN WARS, AND DEVELOP CLEAN ENERGY AS YOU PROMISED!!!!!! The residents of the Blue States (Oregon) are depending on you to HONOR YOUR PROMISES! Certainly, the Dept of Energy understands that there are options and they should be created and utilized. Robin Nicol

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rebecca Barfoot  
Po Box 1040  
Durango, CO 81302

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gilford Ikenberry  
1307 E. Sharp  
Mcpherson, KS 67460

RE: 2012 LNG Export Study

To Whom it May Concern:

We don't need to place our home and lives at risk to elp others with energy. There are alternative energy sources that can be used to great effect already, as seen in Germany due to their green boom since the Fukushima accident. Let companies make their profits by switching to more renewable resources, instead, and leave frackable gas in the ground or powering American plants.

Sincerely,

Jay Cliffe

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeanne Whitesell  
17922 Shoreham Ln  
Huntingtn Bch, CA 92649

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. People living near fracking operations cope with terrifying local impacts: contaminated even flammable drinking water, cancer-causing air pollution and smog, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions.<sup>6</sup> Some residents have even found fracking chemicals and heavy metals in their blood. Yes, compared to the burning of gasoline, the burning of natural gas (methane) is much cleaner. However, the fracking method of obtaining has now been shown to be environmentally disastrous. There are environmentally responsible ways to obtain methane from decomposing garbage, etc. These should be actively pursued and subsidized; and fracking should be entirely halted. The halting of such exports would be an excellent first step. I have a stake in the future - I am a father of 3 young children who deserve better, as do President Obama's kids and all of our descendents. They deserve to have breathable air, a stable climate, and a world populated with as many species of plants and animals as we have today.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shawn Zubicek  
399 Mill Street  
Willits, CA 95490

RE: 2012 LNG Export Study

To Whom it May Concern:

I know you are under tremendous efforts to produce more income for the US, but I don't think exporting Natural Gas is the most intelligent answer. Can't we look to the Netherlands or other country's as examples for "clean" energy. Our resources are precious and not endless. Let's not contaminate what Earth we have less to sell something that we may need in the future.

Sincerely,

Mary Briggs

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John anderson  
602 Fir Ave  
Garibaldi, OR 97118

RE: 2012 LNG Export Study

To Whom it May Concern:

I request that you deny all applications to export natural gas obtained from fracking. Allowing an export market would dramatically increase the scale of fracking in the United States. Exporting requires liquification and long-distance transportation of gas which significantly increases the production of greenhouse gases, and increased fracking increases the pollution of groundwater. Perhaps we need fracking to produce gas for domestic use as we transition to other sources of power, but we do not need to encourage the unlimited growth of another environmentally unsustainable form of energy!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Cool  
562 E Revere Way  
Galloway, NJ 08205

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mark Philips

RE: 2012 LNG Export Study

To Whom it May Concern:

As an American citizen and voter, I can tell you that the risk is not worth the benefit, to me or most other Americans. Oil and fracking companies that use high risk extraction methods do not pay the true environmental cost of their business and they simply get rich in the short run and leave our families and children to clean up the mess. If you approve this you are either stupid or on the take. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mark Maxwell  
2818 Dwight Avenue  
Pittsburgh, PA 15216

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Hittle

RE: 2012 LNG Export Study

To Whom it May Concern:

Natural gas is not the bridge fuel to the future that it is purported to be. Fracking is a toxic threat to all of us, not just those in the immediate vicinity of wells. It affects air and water quality locally and globally, and has a huge impact on the acceleration of climate change. Allowing fracked gas exports would dramatically increase the scale of, and demand, for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. We MUST protect our health, our land, and the rights of future generations of Americans, by not permitting gas drilling to accelerate. Indeed, we must stop what we are currently doing and begin to unravel the damage already caused, while we use the power of our ingenuity to create non-toxic, viable means of producing the energy we need. It IS possible. We must have the courage to choose to do this. When the greed of industrial "corporate citizens" trumps the rights of ordinary citizens, it is time to rebalance our democracy and our lives. Stand up to the fossil fuel industry and deny all applications to export natural gas. Have the courage to halt dangerous practices that harm us all. Reject all applications to export cracked gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Louise Miller

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diane Dreizen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have information that shows fracking is detrimental to the environment. Our air and water sources are at risk for contamination. Please reconsider the world wide consequences and the very negative impact on our beautiful resources...including our children.

Sincerely,

Patricia Orthwein  
3670 Isaacson Rd  
Scandinavia, WI 54977

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christopher Martin

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Glenn Lennox

RE: 2012 LNG Export Study

To Whom it May Concern:

There are so many issues around fracking that to expand the operation in the US to export it to other countries before they are resolved seems wrong-headed. If other countries need natural gas so badly, let them start their own fracking. I don't want expanded risk just so someone can make a lot of money. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ken Klaser  
427 Minnesota Ave  
Fallbrook, CA 92028

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please, President Obama, Say "NO" to fracking right now and live up to your promises of safe guarding our environment for future generations here and abroad. Sincerely, Muriel Gravina.

Sincerely,

Muriel Gravina

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lenore I. Nieters  
9303 Darcy Ct  
Santee, CA 92071

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Hodge  
217 Old Parkersburg Tpke  
Swoope, VA 24479

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michele Shipp

Stand up to the fossil fuel industry and deny all applications to export natural gas. WE NEED A PLAN THAT ENCOURAGES CLEAN RENEWABLE ENERGY SOURCES, NOT CONTINUE TO BE LOCKED INTO DIRTY CARBON INTENSIVE FOSSIL FUELS. WE ARE NOW INCREASING THE RATE OF CO<sub>2</sub> IN THE ATMOSPHERE AT 3%/YR, FROM 2%/YR. AT THAT RATE THE CO<sub>2</sub> CONCENTRATION LEVELS IN THE ATMOSPHERE WILL SOON APPROACH THE CATASTROPHIC TIPPING POINT OF 450 PPM, FROM THE CURRENT LEVEL OF 390 PPM. WHERE IS THE LEADERSHIP ON THIS SUBJECT THAT CONTINUES TO PROMOTE THE FOSSIL FUEL INDUSTRY.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maria Castro  
3818 Hurstglen Way  
San Jose, CA 95121

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Debra Taillard  
6329 Bayside Street, N.W.

RE: 2012 LNG Export Study

To Whom it May Concern:

Contrary to industry claims and ads as well the DOE's report, fracking is not safe nor does it result in clean energy. It negatively affects air and water quality, may disrupt area geologic stability and has a negative effect on climate change and human health. Allowing fracked gas exports would increase fracking activities and therefore the negative impacts on our communities, health and environment. Cooling and shipping natural gas would generate additional CO<sub>2</sub>, further affecting climate change. As an environmental scientist I urge you to deny all applications to export natural gas and to focus on supporting truly clean energy.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Floeck  
127 N. Harper Avenue  
Los Angeles, CA 90048

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Numerous incidents of spills, explosions, leaking of high levels of gas, and contamination should be reason enough to ban the practice of fracking. It threatens fresh water resources and air quality not just in the immediate vicinity of the drilling but for miles and generations to come. Clean-up is exponentially more costly and time consuming than ensuring these accidents won't happen by stopping the drilling frenzy. Climate change will be accelerated by increased levels of fracking. There is no need to drill now- safer practices can be developed and the gas will still be there. Oppose gas export facilities. Sincerely, Julie Schroeder 909 Bostwick Rd. Ithaca, NY 14850

RE: 2012 LNG Export Study

To Whom it May Concern:

The benefits of fracking, including job creation and income generation, have been touted by the industry. However, many costs have not been calculated. The oil companies will transport many trucks and heavy equipment across our roads and bridges. The waste from drilling will be transported to water and sewage treatment plants as well as landfills. The transportation of equipment, staff, and waste from fracking will further damage our highways, costing US taxpayers millions in road repair. Also, the regulatory agencies which will be watchdogs for the health of residents and the environment are understaffed and unprepared for the volume of drilling expected in the United States. All agencies in the US have suffered numerous staff reductions in the last several years. Unless provisions are made to properly staff federal, state, county and municipal agencies, provide education on hydraulic fracturing and update equipment and supplies, the drilling process will not be properly monitored. This problem is discussed at length in Ian Urbina's article in the New York Times on February 26, 2011. Mr. Urbina investigated the impact of fracking in a neighboring state: Recently, Pennsylvania has tried to increase its oversight, doubling the number of regulators, improving well-design requirements and sharply decreasing how much drilling waste many treatment plants can accept or release. The state is considering whether to require treatment plants to begin monitoring for radioactivity in wastewater. What are the costs associated with these additional regulators? Are their sufficient regulators available? What will it cost to begin monitoring for radioactivity in wastewater? I believe we, the residents of the USA, should be protected from radioactive material in our rivers, freshwater lakes and drinking water. Currently no water or sewage treatment plants are capable of receiving fracking wastewater. In the state where I reside, New York State, water and sewage treatment facilities, like our highways and bridges, are already in need of repair and updating. We do not have an estimate on the cost to update sewage and water treatment plants or landfills. Again, in the February 26, 2011 article in the New York Times, it is documented that: More than 1.3 billion gallons of wastewater was produced by Pennsylvania wells over the past three years, far more than has been previously disclosed. Most of this water enough to cover Manhattan in three inches was sent to treatment plants not equipped to remove many of the toxic materials in drilling waste. There are many unanswered questions about the long-term protection of drinking water sources. The principal aquifers in NYS need to be guarded and drilling needs to be a safe distance. Private water supplies need to have farther setbacks. In addition, open-pits for wastewater should not be permitted. They are not safe enough to prevent the migration of chemicals into surface and ground water. I am particularly alarmed by the failure of the Obama administration to address this problem. It has been documented in the Drilling Down series by the New York Times that, in Pennsylvania: Of more than 179 wells producing wastewater with high levels of radiation, at least 116 reported levels of radium or other radioactive materials 100 times as high as the levels set by federal drinking-water standards. At least 15 wells produced wastewater carrying more than 1,000 times the amount of radioactive elements considered acceptable. Will the USA be able to protect its drinking water when the wastewater from fracking contains such high levels of radioactive elements? Without these changes, the federal government is not prepared to responsibly monitor industrial gas drilling in my community. Thank you for your attention on this important matter. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Dieffenbach  
3525 Harlowe Avenue  
Boynton Beach, FL 33436

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The global climate crisis is real. We're already suffering the consequences. Burning fossil fuel is the cause. Stop this insanity now. There is no place to go once we've destroyed our planet. Ask NOAA and NASA if you don't believe me.

Sincerely,

Christopher Dean

RE: 2012 LNG Export Study

To Whom it May Concern:

I am concerned by the reports that exporting natural gas (liquefying, cooling to -260 degrees, and shipping it) will produce 20%-30% more CO2 in our own country than burning the gas here. I am also concerned that exporting this gas will raise energy prices and lower domestic supply, which in turn will be used as excuses to continue to reapprove dirty and dangerous old coal and nuclear plants that were due to shut down. This is before you even get to the open question as to whether drilling thousands of holes through the water table and fracking chemicals et al doesn't just find its way back up into the water we drink. I want energy independence but I want it to be responsible and sustainable. Until concerns over fracking and nuclear waste are more convincingly addressed, we should be seeking energy independence through a stronger commitment to solar and wind power, limiting fracking to places where drinking water isn't at issue.

Sincerely,

George Torjussen

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynn Kazlousky

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There is no reason that these volatile exports should be shipped through our cities and towns, or near any area that is inhabited. Research has shown the hazards; there has been insufficient time for scientific study. The country would be much more positive promoting and developing other less potentially harmful sources of energy (wind, sun, etc.) Do not sacrifice our land and our children through short-sighted decisions! Thank you.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Timothy Kenny  
643 E St James St  
San Jose, CA 95112

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. We must all stand up to the fossil fuel industry and deny all applications to export natural gas. Since we now know that natural gas is not the climate cure-all we thought it was, we must limit any and all drilling for natural gas, and we must not continue to exacerbate climate impacts. We will all pay the consequences of these short-sighted decisions.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margaret Leahy  
1824 East Brae Burn Rd  
Altadena, CA 91001

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Halcyon Debar  
18596 Paseo Lado  
Saratoga, CA 95070

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cecily Ricard  
36013 Church Rd  
Louisville, NE 68037

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jennifer Mayl

RE: 2012 LNG Export Study

To Whom it May Concern:

There is no practical way to secure natural gas terminals from natural and man made ( terrorist ) threats. No one surrounding these export terminals would be safe. All commerce adjacent to these export terminals would be at risk. Have any private insurers made risk assessments or is this just corporate welfare in the form of government assuming risks for private profit? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The Aquifers that fracking destroys (regularly and inherently) are worth more than the natural gas that gets extracted, or worse yet spilled into the atmosphere.

Sincerely,

Daniel Weyerts

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Congress needs to STOP subsidies to the fossil fuel industry and transfer those funds to SUSTAINABLE energy producers. If that happens, we can produce enough energy through sustainable energy to end our dependence on fossil fuels. Poisoning our clean water can mean the end of the human race on this planet. Is that not urgent enough?

Sincerely,

Barbara Grover

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting shale gas will lead to higher gas prices domestically due to an increase in demand from foreign markets paying higher prices for the gas. In the wake of shale gas extraction will be environmental and infrastructure degradation and shortages of clean fresh water for human consumption and for agriculture. The time is now to make the shift to sustainable renewable energy generation and to turn the US into the world's repository for clean water and safe agricultural products. That is an economy that can sustain us long into the future.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Coralie Williams  
4564 Middleton Park Cir. W.  
Jacksonville, FL 32224

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Hugh Renwick  
706 Abbot Hill Rd.  
Wilton, NH 03086

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anthony Commarata  
1833 Fairlawn Knolls Dr.  
Akron, OH 44313

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Yarnes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shane Cassidy  
503 Grimes Dr

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeff Garmon

RE: 2012 LNG Export Study

To Whom it May Concern:

I only supported fracking because it would lower the cost of the gas for the domestic market and cut back on coal and petroleum based fuels for power generation. Exports would just increase the domestic price and ruin any incentive to reduce coal & oil use. You're running in reverse to stopping our dependence on oil imports.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Travis prescott  
305 Cotillion Road  
Fort Worth, TX 76134

U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susannah Martin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Goodwin  
2062 N Vine St  
Hollywood, CA 90068

RE: 2012 LNG Export Study

To Whom it May Concern:

Is the Interior Dept. really planning to release fracking guidelines that do not require the industry to reveal what is in the fracking fluid, and moreover does not address methane leaks or diesel particulate? If so, the government will appear to have been sold to the extractive industries and the people in the affected areas offered up as sacrifices. Fracking is already a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jean lieber

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. My understanding, as an Obama campaign volunteer, was that President Obama was committed to alternative energy and climate protection. Economically, we may need the revenues from this venture, but this is an example of continuing down the same path of allowing oil and gas companies to dictate our future. I understand the narrow scope of the right wing Republicans and their refusal to support economic change, but President Obama, you need to hold your ground. It is not acceptable to state a commitment, then lean to accommodate big business or selfish Republicans! Stand your ground on climate change and environmental protection! Thank you.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bob Roys  
4 Broad Place

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We had the warmest year on record last year, and are already on track for the most pessimistic disastrous road for global climate change. We need to immediately defund these dirty industries and start a space race type investment in rapid climate change reversal. No temporary jobs are worth sacrificing the entire planet for. You want to help people? Help restore their future, because right now, we don't have one. You don't need to give the money to dirty industries. You want to help people? Give the money directly to people and give them incentives to spend it in green way. We need to rapidly build a green-reinforcing economy. We don't need to keep shoring up the disastrous one.

RE: 2012 LNG Export Study

To Whom it May Concern:

You are allowing America to become a gas colony—where our resources: earth, water, air are sacrificed and we suffer the environmental and health consequences in order to save other countries from that sacrifice: e.g., Norway at present. Fracking is a toxic certainty to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Do we need to subject ourselves, our children to this massive health threat? HAVE WE NOW BECOME SLAVES TO THE GAS CORPORATIONS—THE CARPETBAGGERS OF THIS CENTURY?

Sincerely,

Henrietta Wise

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Moreva Selchie  
Po Box 82  
Inverness, CA 94937

RE: 2012 LNG Export Study

To Whom it May Concern:

Here in North Carolina, our new Republican governor wants to go ahead full steam with fracking. I live in an area with a modest amount of gas, and it's a poor area economically. It's also an area on a big, important river (headwaters of the Dan) and on that fault that caused the earthquake a few months ago. A few folks around here are convinced they will get rich from fracking but we don't know enough yet about the consequences, so it's too soon to be doing it here! PLEASE don't do anything more to encourage those gung-ho idiots to do something to our environment that we can't undo! Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

PERSONAL NOTE: A Nation that places NO VALUE on Earths life support systems, places NO VALUE on LIFE! Price Carbon. Stop profits from polluting the commons. Bring distributed green energy production to the communities. Bring profits to the communities. Not profits to the polluters. Money is not the operative word here. Survival for Earths Life Support Systems and a livable earth for the Kidders IS! There is no such thing as clean coal. Ship it over to China WE the People still get the pollution and the climatic disruption, the ecocide fossil barons still get the profits. Same with Frack Gas. Hell, I have a \$120/T charge for home garbage, \$50 for compost makings! Waste water fees, even rain run off is not free to this person. (Guide lines here?) Corpro/People deserve a bulk rate of free? They piss all over themselves at the thought of \$25/ton for toxins! In fact they get my tax subsidy support in the process! Get real Try throwing 19 pounds of paper cups out the car window for each gallon of gas you consume and report! We are talking justice here. Even Morals! Corporations are people now yet dont respect the fiduciary common law of not polluting your neighbors land. For profit or otherwise! The GOP do not fund abortion. Fine. A precedent. Why must I and other progressives fund, with our TAX DOLLARS, the ecocide of the PLANET! What is a fair price to dump tons of toxins in the pristine waters and air of the commons? I seldom see that question asked, much less answered. Aint we talking real money here? Cutting school lunches instead? Corporations are People now. Does not WE the PEOPLE mean ALL of us? Stop profits from the pollution of the commons. Humanity deserves nothing less! I demand NOTHING LESS! Both power and money have been conscripted by the ecocide fossil Barons Distributed Green Energy gives both power and money back to We the People! STOP ALREADY! Captain Leif Knutsen, ret., Family and Friends. \_\_\_\_\_ Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brian Hodge

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking should not be the way of the future. It is a toxic threat to American communities and the climate. People living near fracking operations cope with local impacts such as contaminated drinking water, cancer-causing air pollution, open pits full of toxic wastewater, and more. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Protect our environment. Stand up to the fossil fuel industry. Deny all applications to export fracked gas.

Sincerely,

Maureen Flietner

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Clark

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama, as a new American citizen, it saddens me that this wonderful country is choosing a path that destroys so much of what makes it special and strong: its environment, towns, health, and clean air and water. Please do NOT sign these permits as they will accelerate that which is toxic and destructive. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Thank you.

RE: 2012 LNG Export Study

To Whom it May Concern:

They said it would last "US" 50 years so it would be un-American to block frac'd natural gas. Well why then are we going to export it, could it be greed for foreign currency to erase our trade deficit? I am in the middle of this in Columbiana County Ohio and blocked it on our farm. We will have the last woodland in the area, I wonder if we will be able to trust our well water supply though. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Carol Woodring 327 State Line, East Palesine (Unity Twp), Ohio USA

RE: 2012 LNG Export Study

To Whom it May Concern:

Unless and until fracking can be performed totally and completely risk-free to the environment and the global public interest, it should never be permitted and no incentives to export gas should be created. That day of total and complete risklessness of this dangerous and toxic process is not here for all the reasons below. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please exert your leadership and bully pulpit to stop this harmful industry NOW. The big fossil fuel companies should not make unconscionable profits at the expense of the world's climate and its peoples.

Sincerely,

Madonna Starr

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Allowing fracked gas exports will result in higher natural gas prices for Americans. It will threaten the health of waterways and environment of my state of Oregon. It will claim and foul private lands through eminent domain. Pipelines and LNG plants on the Oregon coast are dangerous, as Oregon, a subduction zone, is subject to huge earthquakes. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Foster

RE: 2012 LNG Export Study

To Whom it May Concern:

Not only is fracking enormously destructive, its alleged benefit is very short lived. After 10-15 years, once useful land will be a wasteland, contaminated and unusable. You do not have to think too far into the future to imagine the consequences of serious reductions in the amount of clean freshwater available to people and ecosystems upon which we all depend, and the loss of land once used by people and non-human organisms and systems. Please think beyond short-term profits - we really are running out of time and environmental capability to absorb assaults. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kate Showers

RE: 2012 LNG Export Study

To Whom it May Concern:

Studies have proven that fracking is an unavoidably toxic process that threatens American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Represent this country and the people who live here. Not the oil companies. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

D Ashford  
Po Box 507  
Hurleyville, NY 12747

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dimitri Balazs

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Deborah K Tash

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elvira Targon

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The climate crisis is already to the point of increasing global average temperatures, which ensures increased frequency and strength of weather events, such as the droughts & storms of 2012. The US is the global leader of emissions of climate disrupting gases, and potential leader of global policies to decrease those emissions. If you do not reject applications to export fracked gas, the climate has virtually no chance, and the US will be responsible for unleashing climate chaos for future generations. Please, protect future generations and stand up to the fossil fuel industry. Please deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen Demos  
25 Crescent Ave  
Peaks Island, ME 04108

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The role of government is to do the most good for the most people and the environment for the longest time. By not shipping natural gas overseas you greatly reduce the many related threats to our environment some of which will greatly assist the average American who lives under the threat of both air and water pollution which this form of extraction produces. This will also be an indirect statement in favor of investing in renewable energy sources which could lead to more jobs in the USA.

RE: 2012 LNG Export Study

To Whom it May Concern:

Mr. President, Climate change will be the pinnacle issue of your daughters lives. It is time for the United States of America to be a participant and leader in halting the activities that accelerate climate change. I am ashamed of our lack of cooperation and leadership on this global issue. It is time for us to be a good neighbor and be leaders. Fracking releases huge amounts of methane - the most aggressive accelerator of climate change. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It takes millions of gallons of water to frack just one horizontal well, and there is no good, commercially feasible way, to clean up the resultant wastewater once it has been used in the fracking process. Given the fact that there are many places in our country, let alone across the world, that desperately need water, it is unconscionable to use our water - an invaluable natural resource - in a manner that will make it unusable by us and must, instead, become polluted beyond reasonable expectation of being cleaned up and reusable once again. This is only one aspect of the fracking process that makes it a completely undesirable way to obtain energy. Given the devastation that this process wreaks on the water and air of the communities in which it takes place, not only should we not be exporting fracked gas to other countries while ruining our own country, but no further fracking should be permitted in any of the 50 United States.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tammy Douglas  
28-12 36th Street  
Astoria, NY 11103

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Norman Haussner  
3113 Blazing Star Trail  
Cedar Park, TX 78613

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Fraley

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,
