To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andy McNutt  
5815 Orchard Creek Lane  
Boulder, CO 80301

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do NOT approve any permits to ship any fossil fuels offshore, OR to further develop drilling and distribution resources here. We MUST put all our efforts into noncombustible energy production from now on.

Sincerely,

James Maddox  
3495 Tanager Circle  
Concord, CA 94520

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daniel Javit  
100 East 77th Street  
New York, NY 10075

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mark Forbis

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Earl vandervord  
330 Chestnut Ave #2  
Long Beach, CA 90802

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rosey Keseling  
8 Woodland Ave  
Nutley, NJ 07110

U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kirk Hughey  
6 Old Forge Ct.  
Sparks, MD 21152

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Emerson Spry  
420 12th Street Apt. K3r  
Brooklyn, NY 11215

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris Nystrom  
3652 Green Mountain Drive  
Livermore, CO 80536

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kate Boyd

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gary Harriman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

L. Trevino  
2819 N. New York Ave.  
Laredo, TX 78043

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nicole Everling

RE: 2012 LNG Export Study

To Whom it May Concern:

The hydraulic fracture (fracking) of rock formations with a cocktail of vast volumes of precious water and a "who-knows-what" of chemical additives has caused great economic and environmental harm in areas in which it has been allowed. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. As far as I'm concerned, we should NOT ALLOW fracking at all.

Sincerely,

Ronald Walters

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Charles Croft

RE: 2012 LNG Export Study

To Whom it May Concern:

What on earth does it take to get through to these greedy fracking companies and the unscrupulous lawmakers who allow them to kill people through the contaminations of the process and ruin the world unchecked. The Mayans implied we are now entering a new phase in the world. Will it be aimed at improving the world by eliminating such destructive forces or will it escalate and expand the present practices and destroy the world? It's also just plain stupid to substantially damage our country to hand over a product to other countries, just for a few people to become incredibly rich here. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suki Hawley  
164 Hall St.  
Brooklyn, NY 11205

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Yale Schwartz  
717 Laurel Ln  
Wayne, PA 19087

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking does serious and possibly permanent damage to our air, water, and local economies. Methane leaks are a serious problem (see Ingraffea and Howarth study, Cornell University) - this greenhouse gas will only make global warming worse. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Catherine Wagner

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eli Fuller

RE: 2012 LNG Export Study

To Whom it May Concern:

The oil and gas giants have been bamboozeling the American Public and Congress for decades! Uhm... Massive amounts of toxic chemicals and potable fresh water mixed together into a slurry and pumped into the earth... gee... sounds like nothing could happen here... uh huh... Are you that stupid? And the use of Potable Fresh Drinking Water is a CRIME!!! In case you have been living under a rock lately - America and the rest of the world is running out of fresh potable drinking water. How is this sensible and wise to use up our drinking water? And YES, These poisons have entered our drinking water supply. Even the Aquifers are being poisoned. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the Understandably, fracking is a complex process to comprehend. In the light of climate change, what lessons have we learned about massive projects jumping into action? BP ignored and screwed us for decades with their hurried and sloppy attempts to go for greed rather than safety. Too many reports indicate the same has already happened in the case of fracking. What standards are being set? Why so many kicking off at one time without stringent standards including halting the project if violations occur. Please slow down and deliberately and mythodically think through the benefits, dangers, rules of accountability, and the fragility of our planet. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary MacPherson  
1436 Mohican Drive  
Pittsburgh, PA 15228

RE: 2012 LNG Export Study

To Whom it May Concern:

I live in New York near the Pennsylvania border so I have seen firsthand the great damage being done to our communities by fracking. What we can't see is even more frightening. This activity threatens our water supply and the health of the local populations. It will also accelerate climate change which is already resulting in extreme weather events. Can we really afford to have more storms like Hurricane Sandy? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cindy Crawford

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Claire Jackson  
4104 W Norma Ave  
Tampa, FL 33611

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Charles Cicco  
2915 Euclid Heights Blvd.  
Cleveland Heights, OH 44118

RE: 2012 LNG Export Study

To Whom it May Concern:

The rush to frack natural gas reserves is simply exploitation: Reap the profits while leaving property owners and the public to clean up the mess. It is the same business model that Wall St now implements: engage in high risk behavior, privatize the gains, socialize the pain. The environmental impact of fracking is currently undisclosed and un-regulated. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fred Orlansky

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Witness what has happened in 2012 in Louisiana when gas drillers hit a salt mine, and created a ten acre sink hole, displacing 300 people in 100 residences. Ask Governor Bobby Jindal about that. Once again the public, not the company, is going to have to clean up the mess. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bob Krasen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gloriajean Berberich

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jessica Winfrey  
2434 Se Lincoln St  
Portland, OR 97214

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sabrina Guo

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Before we consider expanding the demand for fracked natural gas, the gas industry must be held accountable for containing fracking fluids. It is not acceptable to put the cost of disposal on the backs of the people whose drinking water and lands are contaminated by the effluent. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The export of fracked gas benefits upper-income stock holders and industry executives at the expense of local governments and land owners. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Camille Hall

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Hurwitz  
Mommyleigh@Aol.Com

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Larry Beard  
4047 Woodside Ln  
Hubertus, WI 53033

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. You have promised to do something to stop climate change. This can be one, as the process if "fracking" releases methane gas. I'm sure you are aware that methane contributes to global warming and climate change.

Sincerely,

Emily Pearlman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lou Dematteis

RE: 2012 LNG Export Study

To Whom it May Concern:

Until hydraulic fracturing (fracking) has regulations and enforcement thereof that prevent the pollution of our groundwater and exploitation of our citizens, it must not continue. Doing anything to allow further development of this unsafe and unjust extraction method is directly contributing to the destruction of our most precious and unrecoverable natural resources: the environment, and our families. No more fracking. It's simple.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Dawson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Webber  
1217 Silvius Ave  
San Pedro, CA 90731

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It contaminates ground water, consumes massive amounts of water that cannot be spared, nor at present cleaned up, makes farmland useless, as in many parts of Pennsylvania, and causes leakage of significant amounts of natural gas into the atmosphere where this gas is some 30 times as great a greenhouse absorber as CO<sub>2</sub>. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Mertig  
3490 Esquire Dr.  
Murfreesboro, TN 37130

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a potential toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Protections for the public in Pennsylvania are very weak. We cannot protect our communities from the added truck traffic, air and water pollution, and social problems that fracking is bringing.

Sincerely,

Brenda Hameister

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Vm Ortiz

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in an area where fracking sites are very close by. The drinking water is terrible now. Local farmers have had fields ruined. How can humans live without water and food? Don't bother, you can't possibly answer that to anyone's satisfaction. We are the frogs in hot water already and this is sending up the temperature again, just slowly enough that we forget we are being boiled alive. Metaphorically in this case. I see no reason to export energy that we can use here to replace dirty coal and oil fuels.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking can also contaminate individual's wells and they have no recourse.

Sincerely,

Beatrice Delph  
3567 Winston Churchill Dr.  
Dayton, OH 45432

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the global climate. Not only is fracking a short-sighted, non-sustainable fuel, but it is a real threat to water. In the US fracking is lowering an already depleted water table in North Dakota (where the true balance sheet of state income, community and global costs have yet to be published). If allowed, fracked gas exports will dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pamela Allee

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bob And Mary Place  
394 Allview Road  
Westerville, OH 43081

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

I strongly urge that you do not authorize the pending permits for setting up facilities to ship natural gas overseas. Evidence is building that the combined activities for fracking and certainly for conversion of natural gas to the liquified state so that it can be exported, result in worse green-house gas emissions than even coal. We have just experience Super Storm Sandy and other devastating weather this past year which result from climate change. We must halt the increase in greenhouse gases.

Sincerely,

Josephine Larose

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kathleen LePoer  
11 Nagog Hill Rd  
Littleton, MA 01460

RE: 2012 LNG Export Study

To Whom it May Concern:

With all things considered why should we as a Country Export any form of Energy that we Already Know We Will Need at some point in the Future which could Only be replaced by Importing it? We all know that the halfway point of All Known Worldwide Sources of Adequate Quality Oil was passed a few years ago while the Earths Population Continues to Explode which Creates and Causes Even More Consumption of Energy. Tar Sands are Not Adequate Quality Oil so if they are included in any Statistics about Oil Supply they Must Be Subtracted. Meanwhile Natural Gas is agreed by all to be a clean energy source when it is used but the Big Issue is How Much Damage, including unseen damage, is being caused by the Practice of Fracking? This Means that we as a Country would be taking all of the risks that come with the process of Fracking including the practice of pumping enormous amounts of untested, unknown, and unregulated toxic waste into the Earth Without Getting any of the Benefit of the Natural Gas itself. Underground sources of fresh clean water called aquifers are at risk of being seriously polluted which is Absolutely Irreversible when it happens. The process of Fracking also includes using very large amounts of water which is a Finite Resource of Absolute Necessity that is already in shortage in many parts of Our Country with even more areas that are at Serious Risk of experiencing Water Shortages. Large Regions, and even Our Country as a whole, are far closer to a Crisis Caused by the Lack of available Clean Water than almost all Americans Understand. Underground water provides millions of Americans with their Household water and for some it is the Only Available Source for their clean water. Exporting Natural Gas is a Negative, a Loss of Energy and a Waste of Water for All Other Americans who will Not Profit from it and Who are Not Demanding that Even Larger Profits Comes Before what is Best for All Americans. Other Serious Problems have appeared that are believed to be caused by Fracking and these must Be Measured and Studied instead of the ongoing Gambling with Our Fresh Water Supplies. Exporting Natural Gas means the United States would be taking All of the known and unknown Risks of Fracking and shipping all of the Benefit of the end Product to Other Countries. This Is Insane. Why would we as a Country Do This? The Question becomes Who Will Receive the Most, or Almost All, of the Benefit from Making This Choice and Who Will Pay an Unknown and Potentially Enormous Price? There is Only One Reason that this type of Insanity is being Sold to All Americans as Something Good when in Truth by All Measure it Will Only Benefit the Already Very Wealthy and it Will Do So At The Potentially Enormous Expense of All Other Americans- AGAIN! Do you really want even more of this now common Benefit and Risk Model that some time ago became a Daily Corporate Business Practice? If you want an example of How the Disparity of Wealth in Our Country has become so massive this is just one. This is the Wall Street Business Model where the Vast Majority of All Americans takes all the Risk without even knowing it and end up Suffering the Dire Consequences from It while the Already Very Wealthy Take All of the Profit and All of the Wealth for Themselves and Themselves Only. There Is One and Only One Reason Why We are being Sold the idea that Exporting Natural Gas is a Good Thing and that reason is because it is More Profitable for the Very Few. As an Export it may pay reduced, or very little if any in Taxes because it is an export who some will claim automatically makes it a good or great idea. I am sure there are more reasons why Exporting American Energy is More Profitable or they wouldnt be doing it. Do you Accept the Idea that All of Our Nations Natural Resources are Not Our Nations Natural Resources but are instead Owned by and Belong to Only the Very Few Very Wealthy to do with as However They Wish without Regard to How This Affects the Lives of All Americans? This is another clear cut example where even greater Profits for the Very Few Trumps what is Best for All Americans if we Allow This to happen AGAIN!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elisse Antczak  
560 Lancer Court A2  
Depew, NY 14043

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Five million gallons of water per frack -that is what is used in the rotten practice of squeezing hard-to-get gas from our deeply punctured and fractured mother earth. My latest notice from the Denver Water Dept. says, "We're still in a drought...so we need to fix every leak and reduce indoor water use". However, the fossil fuel industry gets to terminally pollute and forever remove from the water cycle MILLIONS AND MILLIONS OF GALLONS OF WATER. This and other well documented fracking-caused-environmental-horrors like methane released from fracking wells, are being perpetrated so that we can ship gas to China where all our jobs have gone, with the help of more subsidies given by our bought-off politicians. Fracking is horrible at every level...local, national and planet-wide. At this point any help you give to the fossil fuel industry is a crime against humanity and the planet.

Sincerely,

Kathy Hamilton

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Vanderburgh  
72 Glen Eden Ave  
Oakland, CA 94611

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is an extreme way of obtaining fossil fuel & the harm it causes has been well documented. I am under the impression that our current administration is committed to green solutions for our energy needs, such as solar, geo-thermal & wind turbine. There simply is no logical reason for supporting fracking in order to obtain natural gas or any other fuel.

Sincerely,

Fay Harrison

RE: 2012 LNG Export Study

To Whom it May Concern:

Corporate America has lied through the centuries to get what they want, and what they want is more wealth, to hell with the consequences. We cannot allow them to create another Love Canal situation. They told everyone it was totally safe, back then. Look at what they did to Love Canal, and the people whom lived nearby. They are lying now. Anyone with an ounce of sense, that pays attention to the environment, can see the devastation it causes/ has caused. Just look at the places where they have already done so. Huge open ponds, full of toxic fracking chems (trademarked no less, to keep us from knowing how deadly it is), that are wrecking the lives of the people in the communities. NO EQUIVOCATION. NO FRACKING!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joseph Wellner

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Garrick Stephens  
201 S. Aparejo Street  
Marfa, TX 79843

RE: 2012 LNG Export Study

To Whom it May Concern:

Without question, hydraulic fracturing is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Hugh Carola  
617 Spring Valley Rd.  
Maywood, NJ 07607

U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jill Colwell

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of, and demand for, fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The excuse given for the immediate need for fracking is that "we have a current demand for this fuel & to supply it will help make us energy independant." If this is the excuse given for the need to frack our trap rock for natural gas, then why should we allow these companies to export what we need here? There is absolutely no reason to export fracked natural gas, except to stoke the insatiable greed of the oil & natural gas industry.

Sincerely,

H. Dennis Shumaker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peg Keyes

RE: 2012 LNG Export Study

To Whom it May Concern:

Politicians frequently talk about making the United States independent of foreign oil; that suggests that we should keep the fossil fuels in the United States instead of exporting them and then importing other fossil fuels. What we should is BAN FRACKING! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Sanchez  
948 G Street, Salida, Co

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Horner

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jared Furtado  
15 Dory Street  
Jamestown, RI 02835

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

The city of Beijing in China is a good example of the air quality we can expect if we do not start addressing these issues today. We need to secure our energy needs but we do not need to be exporting energy. We must be the leaders in developing alternative energy as a way to end fossil fuel use. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maryl Mendillo

RE: 2012 LNG Export Study

To Whom it May Concern:

There are many reasons for hydrofracking: more jobs, lowering prices at the pump more energy for a growing population, etc: All reasons to increase energy consumption\*. There is only one for not doing so: we should not be putting more carbon dioxide into Earths atmosphere. For those well-meaning citizens who fail to see the absolutely clear evidence clearly showing that the carbon dioxide content of the atmosphere is having a drastic impact on our lives, safety, and finances: it is immediately obvious in greater intensity, frequency, and occurrence of rogue and more violent storms, etc. those storms come at odd seasons of the year, at previously calm-weather locations. The Arctic ice is melting: rapidly. Ocean currents are changing, along with widely spread plant and animal life reduction. The temperature change not only affects storms and life, it also affects ocean depth, thus increasing for two reasons: melting ice expansion due to depth. Already, Ocean losses include wildlife, fish, vegetation. Economic losses will do us in if Mom Nature doesnt. Reports from reliable scientific analysis of possible human impact on climate change were well documented forty and more years ago. Those forecasts could have been written based on observations made last week. Why not develop more fossil fuels? Because we cannot afford to increase carbon dioxide emissions. Period. In fact, we are way past the time when an all-out, national effort (to go to war) is needed to initiate a 1930s type national program to change as quickly as possible to green fuel sources. Peter E. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jimmy Voegeli  
N7302 Hwy 69  
Monticello, WI 53570

RE: 2012 LNG Export Study

To Whom it May Concern:

The Fracking Industry has demonstrated its inability to conduct its business safely. Until it does so, we should NOT allow it to expand and make more money by polluting our communities and damaging our environment. In addition, America should focus on using our resources to power a push for clean sources of electricity rather than cashing in on a short term business goal.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shirl Levesconte  
602 Robinwood  
Yellow Springs, OH 45387

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gayle jones

3444 Airport Rd.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. More study needs to be done to confirm recent reports on methane release. If industry demand jumps, as it will if we begin to ship overseas, then we will be accelerating global warming at a time when we must be reducing it.

Sincerely,

Bill Worzel

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. You have seen the proof of what fracking is doing to the water supply of hundreds even thousands of American citizens....brown drinking water...water that stinks of methane...and water than can be lit on fire!!! with the amount of methane it contains. And that's just what we can SEE with the naked eye! NO NO NO to more fracking!

Sincerely,

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Vaughn Shirk

RE: 2012 LNG Export Study

To Whom it May Concern:

If you're going to allow this environmentally-unsound practice to continue, at least keep that gas at home to address our energy needs rather than allowing profit-oriented corporations to ship it away. We can't be "energy independent" (whatever that's supposed to mean) if we go to extremes in extracting fossil fuels just to ship them overseas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I urge you to advocate for a global carbon tax. We need a community of trading partners committed to effective action to curb global warming. With your leadership, we can lead on this issue. There is no more important issue. If we get this wrong, all else is imperiled. Exporting natural gas makes no sense on a global scale. A carbon tax would make that evident, but in the meanwhile, I support limits on exports.

RE: 2012 LNG Export Study

To Whom it May Concern:

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Fracked gas is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. (Jeff Tollefson, "Methane leaks erode green credentials of natural gas," *Nature*, January 2, 2013) Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall. (Craig Segall, "Look Before the LNG Leap," *Sierra Club*, November 2012) A world that runs on natural gas is a world wracked by climate chaos and extreme weather. We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. For the United States, 2012 was the hottest year in recorded history. A slew of climate change-driven disasters—including deadly Superstorm Sandy—underscored the dangers associated with unchecked climate change. It's time for President Obama to answer the call of history and stand up to the fossil fuel industry—starting with blocking fracked gas exports.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking Pollutes !!! GIVE A HOOT DON'T POLLUTE !!!

Sincerely,

Elizabeth Dean

To Whom it May Concern:

Fracking is a toxic threat to American communities and our planet's climate - did you know that exporting fracked gas, which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it, produces 20%-30% more CO<sub>2</sub> than burning gas in the US? Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is going in the WRONG direction! Taking more carbon & methane out of the ground for energy use will hasten our demise as the world warms even faster. We should NATIONALIZE our hydrocarbon assets, not allow the gas industry to sell them to the highest bidder on the world market! If you care about the nation's future, then BAN fracking because it is NOT in our best interest and will make our future "darker" than it already will be given projections of a 5-7 degree F rise in temps. over the next 100 years. Fracking = Suicide

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to the environment and its surrounding communities. We do not yet know the effects it will have on an already slippery slope of global warming. Allowing fracked gas exports is suicide for the United States. Please deny the fossil fuel industry any further power over exporting and force them to discontinue this poisonous process. By encouraging this practice you are signing a death wish upon generations to come. There are other options. Using less fossil fuels energy, although it might take some getting used to, is one. These short-sighted companies are concerned about profit, not about the well-being of the citizens of this planet. sincerely, elana pereira

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Okechukwu Anagbor  
2333 Loreto Drive  
Fort Worth, TX 76177

RE: 2012 LNG Export Study

To Whom it May Concern:

The only reasons many people support fracking are because of the possibility of lower fuel costs at home and not having to depend on mideast oil. Allowing fracked gas to be exported eliminates both of these benefits. Fracking is a toxic threat to American communities and the climate. Who suffers and who benefits from allowing fracked gas to be exported?? Do you represent the people of this country or the multi-national corporations that could not care less about America? Please stand up to the fossil fuel industry and deny all applications to export natural gas. Thank you.

Sincerely,

Steve Dickman

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

June Kramer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Awilda Castro  
1222 Locust Street  
Reading, PA 19604

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to the American people, our communities and certainly our climate. By allowing fracked gas exports, the demand for fracking in the USA would only increase, creating a demand for more drilling sites in pristine and less populated farm areas. This is not acceptable. Air pollution forced on our people and their drinking sources will only increase the load on our health care system and the tax dollars that support it. Don't give our country away to the fossil fuel industry for consumption by huge foreign markets. It's time to push for green energy and increase the job force in solar and wind energy sectors. Please, stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Rossin

OK, I have the canned opinion below from Credo action but seriously - IF YOU GUYS ALLOW FRACKING IN MONTEREY COUNTY WHATSOEVER I WILL MAKE IT MY MISSION IN LIFE TO TAKE EVERYBODY INVOLVED DOWN!!! It is a seriously UN-understood process and we have enough problems with water here and I have heard that fracking requires an EXTREME amount of water to force the crap out of what is a VERY delicate environment... PLEASE we HAVE to use SOLAR and WIND, not gas, I know that BP and Chevron and Shell OWN our government but in this case PLEASE don't do it, i am BEGGING you to listen to me, you don't KNOW what the consequences are! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sharon Nicodemus

RE: 2012 LNG Export Study

To Whom it May Concern:

Hydraulic fracturing remains largely unregulated and there remain serious questions about its ramifications for groundwater sources and air quality. While burning natural gas is cleaner than coal, fracking still features the use of fossil fuels for energy production and thus contributes to climate change, which this country must still address more adequately. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Victoria Burns  
127a Stuart Ave  
Norwalk, CT 06850

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Guy Vaccaro

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Louise Rozos  
401 E68th St  
New York, NY 10065

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christian Leiva  
248 Corbett Avenue

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking risks damaging water supplies, and contributes to global heating. Fracking is bad enough, but fracking for export would mean even more damage. It would be in addition to other exports, not a substitute. To avoid disaster, humanity must leave over 2/3 of known reserves of fossil fuel in the ground. As a start, please ban fracking for export.

Sincerely,

Richard Stallman

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We need to begin now in our efforts to curb the impacts of climate change. I watched the innaugual yesterday. You are taking this country in my view many of the right directions. I am very proud of you in so many ways. You spoke of climate change and its impacts. This is a great place to draw the line. Please do not sign off on these megaprojects to send natural gas over seas. Continue to promote solar and wind. There is a picture taken from outer space that shows Western North Dakota lit up by gas flares. Let's find a way to capture that gas and use it here. These gas and oil corporations need to solve that first before sending any gas over seas. Respectfully submitted, Larry and Nancy Dolphin Our address if 54769 180th Street, Austin, Minnesota 55912

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margaret Pfister

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The DEP is NOT partial and they are not giving ALL the facts. There are no safe compromises; water and air MOVE and eventually get to everyone, including your children; these toxic waters can NOT be filtered or rendered drinkable ever again and your great great grandchildren will never know what it is like to turn on the tap for a drink or take a swim in a beautiful lake or pond! PLEASE SAY NO TO FRACKING/ Hydrolic Fracturing

Sincerely,

Pati Nigro

RE: 2012 LNG Export Study

To Whom it May Concern:

As a person who drinks the water and breathes the air, I urge you to deny all applications to export gas that is the product of hydraulic fracturing. It's bad enough that this potentially dangerous practice is being used to provide natural gas for our own citizens, but to allow it for exports just increases the amount of fracking and the danger—with no benefit to anyone but the oil and gas industry. Please reject applications for exporting fracked natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cindy Schlosser  
221 W 16th St  
Florence, AZ 85132

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We need alternative sources of energy – not more of the same fossil fuels, and definitely not processes as fraught with difficulties as fracking – if we are going to address the environmental and climatic problems we face. More natural gas is really not the answer, especially when extracting it poisons water resources.

Sincerely,

Laurie Olson Williams

RE: 2012 LNG Export Study

To Whom it May Concern:

The health and environmental risks of fracking are substantial, but even if those were negated, America should use its energy resources here. Let's become energy independent, not energy exporters at the expense of our own economy and ecosystems. Don't pursue profit from fracking; let's make clean energy profitable and efficient.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There is too much we do not know about the facts and consequences of fracking. Exactly what chemicals are involved and what impact they have on communities and the environment. In addition, methane is a more potent greenhouse gas than CO<sub>2</sub>—expanding this market will lead to greater global warming consequences. I understand that natural gas is currently a part of our move toward energy independence, so the domestic market has some roll to play (though hopefully a temporary one). But allowing sales to foreign markets does not improve energy independence, it only lines the pockets of an already wealthy industry. Please restrict this practice to domestic needs, and only for as long as there are not better greener replacements.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Brown

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Knudson  
P.O. Box 2046  
Walla Walla, WA 99362

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is being sold to us guaranteeing "energy independence" – which it will NOT do if we export it. We can only be energy independent if we use our own resources here at home. Stand up to the fossil fuel industry and deny all applications to export natural gas. Or stop touting fracking as an "energy independence" tactic. Call it what it is: a whopping windfall for Big Energy corporations.

Sincerely,

Debra Ames

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Moreover, the DOE (Department of Energy) should know better. Contamination of our groundwater and watertables are not the only threats posed to our communities. EARTHQUAKES (increased seismic activity) ARE A HIGH RISK! Recall if you will, in 2012 earthquakes were generated as a (consequential) result of "fracking" near Youngstown, Ohio, the Commonwealth of Pennsylvania, the State of Colorado, and elsewhere in the U.S.; signifying that "fracking" is not a safe procedure to employ by gas and oil companies in their search for natural gas. Gas and oil companies are not to be trusted in their claims that they employ safe procedures, and that they are in effect exploiting Nature for the sake of greed and/or "big profits." Scientists (geologists) CANNOT predict exactly WHEN earthquakes will occur, and moreover, the magnitude of a "small earth tremor" and/or "tremors" thus far is not to be trusted; and that much stronger magnitude "quakes" being generated is a very likely probability; as "fracking" can serve as unwanted and undesirable CATALYSTS and SYNTHESIS for future human induced, frequent seismic activity.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a proven toxic threat to American communities and the climate. Why should we bear the toxic effects so other countries can have fracked gas exports? Exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Greene  
806 Francis Av  
Columbus, OH 43209

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dustin Lamoureux  
2168 Kalakaua Ave  
Honolulu, HI 96815

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Arthur Scott  
620 East 17th Street

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It's time to move the U.S. beyond fossil fuels - that includes not exporting them. Until we obtain meaningful legislation limiting fossil fuels on a broad scale, agency permit processes remain one of the best ways for the executive branch to address climate change by denying permits for fossil fuel emitters, extractors, and exporters.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I want to be proud of America acting responsibly with all the fossil fuels we have. I do not believe that we should export natural gas, and I want you to please work harder to go with sustainable, clean energy!

Sincerely,

Rebecca Mitchell

RE: 2012 LNG Export Study

To Whom it May Concern:

Some of the LNG export terminals are, themselves, dangerous liabilities. I'm most familiar with the hazards of putting them on the Columbia River and Oregon coast. The ships are large and the Columbia Bar is difficult to navigate. Weather on the Oregon coast drives on shore. It's not safe. Getting the gas to those ports requires high volume pipelines that must be sited through ecologically sensitive areas. Already, there has been a great deal of public comment on LNG pipe lines - they are not popular around here. Then there is the probability that fracking poses a toxic threat to American communities and the water on which they rely to exist. We still don't know what chemicals are being pumped into the shale or what happens to it. Disposal of the effluent is an unsolved problem (storage, whether in tanks or surface ponds are not the answer). Then there's the effect of putting more greenhouse gas into the atmosphere at a time when we should be curtailing that habit and insisting on use of more solar and wind technology. If you care about the effects of climate change then you must limit even the use of natural gas as a fuel. I agree that natural gas, more benignly obtained using conventional drilling technology, may be necessary as a transition fuel. If so, it should be reserved for domestic uses. Encouraging energy companies to quickly extract cheap (for now while its plentiful) gas for export, probably will consign us to pay more later when the most readily accessible reserves have been exhausted. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. While this may be in the short term interest of profit driven corporations, it is not in the best interest of your constituents, We, Your People. I demand that you stand up against the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Yarnell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. We have no experience or studies about the harm and damages caused by fracking. Allowing fracking can destroy our clean water, can cause earthquakes, and may also cause health problems and death to living beings - human and wildlife. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.' Don't allow lies about jobs and mislead the public into thinking resources will be for American use, if, in fact, it is going to other countries. Harm may be irreversible to our planet. Please use your speaking abilities to inform the public - the truth, the facts.

RE: 2012 LNG Export Study

To Whom it May Concern:

REJECT PERMITS FOR LNG EXPORT UNTIL SCIENCE CLEARLY SHOWS THAT FRACKING CAN BE MADE SAFE!! Neutral third-party scientists must study the impacts of fracking on public health (air, water, land - on farms, in parks, at schools, in our homes and hospitals). You would NEVER let a surgeon operate on you unless apprised of specific health information!! You would never let a lawyer represent you in court without the facts!! Astronauts would never fly in a rocket previously untested!! You would never go up with a pilot who knew as little about flying as the gas industry knows about fracking!! Gas industry insiders are intoxicated with dreams of massive wealth - they seem to forget that they, too, breathe air, drink water, and need an inhabitable planet to live on. Wind and solar do not pollute. They are far safer options than staying with fossil fuel. Such claims that turbines kill birds (fact - at a rate 1% of our building windows!!) are distractions - as if the industry really cares about birds. If we focused on getting Americans to use LESS POWER (certainly not what the power industry wants!) - we could reduce CO2 by 30% within a month!! Do you really feel confident that the gas industry ought to go blindly into the night without a map - before we can trust that they are thinking about the public good?? Once we have a ravaged environment - we can't get a clean one back. Natural gas ought to be a stop-gap measure to help U.S. security by allowing us to becoming energy independent (once we know what we are doing - and there is a LOT of information that shows that we DO NOT) - NOT for the enrichment of the industry with exports. SLOOOOWWWWWW DOOOOWWWWWNNNNN! Take a breath. Think. It's a Pandora's Box! Let science be the guide. Measure twice before you cut once!

Sincerely,

L. Matthew Schwartz, MD

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jo Patton  
7201 Bullion Hill Road  
Flagstaff, Az, AZ 86004
