

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Katrina Chaves
1084 West St
Wrentham, MA 02093

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Drieslein
33419 County Rd 103
Houston, MN 55943

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Catherine Heacox

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dottie Seyfried
35043 Cadbury Circle E
Lewes, DE 19958

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The gas companies have told us that we need this gas for our "energy independence" and as a "transition fuel" to solar, wind and renewable energy sources. These are lies. We can power the planet if we follow the plans of Jacoby and Dilluchi laid out in their Nov. 2009 Scientific American article and updated in the two articles written by them in the journal Energy Policy in March 2011. We can transition the planet by 2030, without fossil fuel or nuclear power. Germany's goal is 80% renewable energy by 2016 and to shut down all of their nuclear plants by 2022. If the Germans can do this why can't we in the US do it?

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suki Diamond

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen Murray

RE: 2012 LNG Export Study

To Whom it May Concern:

I am opposed to export of natural gas obtained via hydraulic fracturing (fracking). Fracking, if not very, very carefully done (and I do not believe it is being done very carefully), is a toxic threat to both people and the environment. Fracking has been sold to the American public and various state legislatures as a way of achieving "energy independence", but opening up a global market to fracked gas subverts this purpose and exposes the true aim of the fracking industry. We, in this country, should not have to suffer the environmental and health consequences of fracking simply to support huge profits for the fossil fuel industry. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Hannon

I am very worried that not enough research and oversight is being done to ensure fracking does not do long or even term harm to our safety. Gas and oil companies have too much power and are too willing to overlook possible future issues for short term gain. Please stand up to them. Slow down. Make them pay for research we can trust, be open about their procedures so independent researchers can verify study results and publicize findings. It is truly scary that so much is being done in a short time. Please slow down!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cheryl Viering
320 Stanton Rd #112

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. I thought that the whole point was for us to be energy independent and protect our natural resources—not make the gas companies richer at our expense!! Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Trippel

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The process of fracking and burning gas results in at least as much CO₂ as burning coal. Expanding fracked gas production is moving in the wrong direction if we are to adapt to climate change and lessen the extent to which it gets worse.

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting shale gas will lead to the further expansion of drilling and fracking in the U.S.. The gas industry will certainly benefit from increased prices, up to 7 times greater in China than in the U.S.. But how will expanded production affect our health and our communities? How about our water, air and land? A close look at the negative impacts of drilling and fracking in Pennsylvania indicates that it is imperative to provide honest answers (not industry answers) to the above questions before even considering any expansion of shale gas production for export. Stand up to the corporate greed of the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

In the quest for lucrative mining permits that can be tough to get, frac companies covet the local regulators' knowledge of the region's geography, personal connections in small towns, and intricate understanding of county ordinances. Minnesota and Wisconsin (where we live/work/play) are already affected by the problems of sand fracking. County employees, who were highly experienced at taxpayers expense, are voting for fracking and leaving their government positions to work in more lucrative sand fracking jobs. The beauty and quietness of the bluffs we enjoy on our kayaks is being destroyed by fracking. NO MORE FRAC! Find alternative energy sources that don't deplete the beauty and integrity of our homeland.

To Whom it May Concern:

Where I live, in Western Wisconsin, mining companies are on the move, seeking agreements to allowing sand mining to use in fracking. We understand that proposed mines will destroy our landscape, and quite possibly contaminate our groundwater. I oppose the mining of this sand because of the degradation to the environment. I also oppose the mining of this sand because it's intended use is in the highly dangerous process of fracking. And I absolutely oppose the export of fraked gas. Develop sustainable and safe energy sources - wind and solar.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lani Kroemer
3418 E Rockledge Rd

RE: 2012 LNG Export Study

To Whom it May Concern:

It's time to put our focus and investment on carbon-free energy sources. If we do approve any export licenses, we should tax their profits substantially (i.e. 40%-50%) to fund carbon-free energy source developments like utility grade solar, wind, and hydro and get us (and the importers buying that gas) off carbon-based fuels as soon as possible. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Warren Roark

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There are different ways to get the energy that we need. Why choose those methods and materials that do not help sustain the earth? Why not put our creative energy, jobless citizens and communities to work to transform energy from sustaining processes such as wind, water and solar. Isn't this more sensible?

Sincerely,

Michael Pollitt

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. What sense does it make to export fracked gas? One of the biggest (fallacious) arguments for fracking is that it will make our own country more energy independent. Allowing fracked gas to be exported exposes the pro-fracking argument for the lie that it really is!

Sincerely,

Susan Wolstenholme

RE: 2012 LNG Export Study

To Whom it May Concern:

Until there are proven ways that are supported by the majority of the scientific community, to protect the environment from the toxins that are released by the fracking process. And until there is a more efficient way to use precious water supplies, or perhaps find a way not to use water at all, and to de-contaminate it if it is used, I am against the fracking process. I would love to see our country be able to provide more jobs for it's people. However, I think the process as it stands today would exact too great a price and too great a damage to the environment and therefore to the people who depend on that environment for life and health. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Janice C. Ledebur

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Obeid

Stand up to the fossil fuel industry and deny all applications to export natural gas. Please take a look at what is happening in Pennsylvania. Here in New York we are desperately fighting to prevent what is happening in PA from happening here—that is fracking and its resultant destruction of land, poisoning of water and air and people. Please put your energy and power into renewable energy and not a project that will contribute to climate change and cause harm to people, communities and the environment. We need to make big changes now in our use of energy and the kinds of energy we use. Let's try solar and wind for awhile!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol wilhems

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sam Wells

P.O. Box 524

Leakey, TX 78873

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

I am opposed to fracking because i care about communities' groundwater and, while it's cleaner than coal, natural gas is still a greenhouse gas that we can't afford to burn!

Sincerely,

Joey smith

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Felipe garcia

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roberta Bristol
911 Balboa Ave.
Capitola, CA 95010

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alexis McCulloch

RE: 2012 LNG Export Study

To Whom it May Concern:

How does exporting the United States' natural resources achieve our goal of "energy independence?" Shouldn't we conserve our nonrenewable resources for our own future use until we develop renewable sources of energy? As a Texas Gulf Coast resident I am concerned with hurricanes, the frequent mishaps of the fossil fuel industry that are kept quiet as well as the prospect of a Texas City-like disaster. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the Earth's climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The effect of emissions from fracking operations on the global climate and the resource-intensive processes required to ship fracked gas makes the consequences of exporting fracked gas only beneficial to the fossil-fuel companies by increasing their profits at the expense of those that own the natural gas resources, the American public. Please deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rogers Turrentine

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jean Johnston

Stand up to the fossil fuel industry and deny all applications to export natural gas. Are we going to wait until the canaries have decomposed before we brave up and deal with reality? Are we going to be the final Easter Islanders on this rock, taking the whole thing down, because some of us are too stuck to get real? I'm so tired of the underdeveloped minds and hearts of the materialist regime running the show: Repugs, mainstream media and robber barons. COME ON - MAN UP AND GET REAL!

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diane Hartman

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ron Harris

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and our water supply. Leaking methane and carbon dioxide from burning methane combine to be a serious problem for the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Exporting natural gas will increase the price to American consumers and industries that depend on natural gas for their product production. How will exporting our gas make us energy independent? By doing this, we will be importing both oil and gas in the relatively near future. The natural gas should be extracted slowly to give time for the technology to improve so it doesn't threaten our water supply and health. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Makofske

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janice Parker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The way forward is solar thermal-if 60% of the US were solar powered to the point of 80% independence from fossil fuel for heating and domestic hot water, that alone would do away with most of our use of natural gas.

Sincerely,

Fred Bergmann

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bob Zeller

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lucy Saunders

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Douglas Hicklman

RE: 2012 LNG Export Study

To Whom it May Concern:

There is absolutley NO REASON except the run to use up every limited natural resource that is left for this egregious contamination of our one & only planet...WHERE EXACTLY DO YOU THINK YOU WILL LIVE & BE ABLE TO THRIVE ONCE THE LAND, AIR & WATER ARE TOTALLY TOXIC???? WHERE WILL YOUR CHILDREN & GRANDCHILDREN LIVE? Fracking is beyond comprehension...especially when alternative, non-polluting renewable energy technologies are not only available, but are being improved every day. Other countries are implementing them, WHY ISN'T AMERICA???? WHY ARE WE STILL GIVING SOME OF THE MOST PROFITABLE COMPANIES IN THE WORLD \$\$\$10 BILLION \$\$\$ IN TAXPAYER SUBSIDIES EVERY YEAR, WHEN WE CAN'T EVEN FEED OUR CHILDREN, WHEN MORE THAN 4 MILLION FAMILIES HAVE BEEN ILLEGALLY FORECLOSED UPON & NOW HAVE LOST THEIR HOMES? HOW IS IT THAT NOT ONE OF THE CRIMINAL BANKERS WHO CAUSED OUR ECONOMIC DISASTER HAS BEEN ARRESTED? WHY ARE THE REGULATORS OF THE BANKS & THE FED THE SAME PEOPLE WHO WORKED FOR THOSE COMPANIES THEY ARE NOW SUPPOSED TO BE WATCHING THEM FOR MISUSE OF OUR MONETARY SYSTEM...HOW RIDICULOUS! You are doing NOTHING but making sure that all of our PUBLIC TRUST LANDS ARE BEING ABUSED, TOXIFIED & DESTROYED BY THE OIL & GAS COMPANIES..JUST TO PUT MORE BILLIONS INTO THE HANDS OF THOSE WHO CERTAINLY DO NOT NEED IT.... THIS ENTIRE GOVERNMENT IN A DESPICABLE JOKE, A CORRUPT GANG OF CORPORATE WHORES... Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marie Alabiso

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. No Fracking!!! I will never vote for anyone who supports Fracking.

Sincerely,

Susan Cousineau
42501 Green Canyon Rd E
Davenport, WA 99122

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Cielukowski

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eleanor mULDOON

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen Dickstein

RE: 2012 LNG Export Study

To Whom it May Concern:

The entire excuse for allowing this risky and environmentally unsound production method is to promote US energy independence. There is no excuse for accepting this risk and the environmental consequences if the fuel is to be exported. If we need this source of energy, keep it here. If we do not need it, LEAVE IT IN THE GROUND. Don't spew it into the air, here or abroad! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. No Fracking is the only way to go. It is too dangerous to the environment. You know that clean water is going to be more rare & more valuable than Gold in the near future, especially if yo continue promoting fracking!

Sincerely,

Robin Blier

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. adding to the problem, is that mineral rights are not required to transfer with property. Often home/farm owners sell the mineral rights to the gas companies, move away from the area and collect income from the gas companies. Leaving the land that they left with no stewardship. It is similar to an absentee slumlord. Those profiting from fracking have no repercussions from the damages incurred by the process.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Schuermann
422 1/2 Escalona Dr.
Santa Cruz, CA 95060

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kurt Bachmann

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Vanhuysen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sue Graves

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steve Gaissert

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jefferson colman

Stand up to the fossil fuel industry and deny all applications to export natural gas. In my home state, OR, citizens are uniting to halt plans to ship coal for export through our state from east to west coast. And we are opposed to fracking which is on going in SW PA where are daughter and her family live. Water has been contaminated and farmers have lost their farms due to fracking. We trust our federal govenmenet to protect us, not do the bidding of oil companies. Sincerely, Ray Kauffman Albany, OR

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We can do better by the American people. We shouldn't be sacrificing the health of our own citizens so the fracking industry can make more money. Start putting Americans first!

Sincerely,

Ann-Louise Truschel

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sean Kennedy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Adding to the carbon emissions by other nations will worsen the climate change. Selling other nations our resources will lessen the incentive for humans to develop renewable fuels. Please reject applications to export fracked gas. Submit a public comment to the Department of Energy. Thank you for considering the implications of this decision on your part.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kate Brotherton
25885 Trabuco Rd. #136
Lake Forest, CA 92630

RE: 2012 LNG Export Study

To Whom it May Concern:

I am a Democrat and voted for you in large part because I believed you would lead this country to a SUSTAINABLE energy future. I truly believe it is this planet's only hope for a future. I am alarmed that fracking is being given any consideration at all. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Just say 'no' to fracking and move us towards a sustainable energy future.

Sincerely,

Cheryl Costigan

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do NOT allow permits for the export of natural gas produced by hydraulic fracturing. It is bad enough that we will endanger parts of the nations water supply for generations to come, along with the other health and environmental effects of this industry. But to do so in order that multinational corporations can increase profits instead of lowering energy prices in the US is working against the best interest of the American economy and its citizens. Embargo the export of natural gas, or apply such a big tariff that its export is unprofitable. Thank you. Carle J. Kopecky 120 Clapper Road, Warnerville, NY 12187

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Todd Swanson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Will the people get any of these profits from exporting U.S. gas? I think not unless we are stockholders in gas companies. Will the government get enough money from these exports to pay the ongoing disaster relief money that fracking will contribute to causing? Again, I think not. Stop this for your own children and their children! Thanks...

Sincerely,

Michael McCarthy

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If the purpose of fracking is to make the USA energy independent, than it is totally inappropriate to consider exporting fracked gas. This is just a fancy way of allowing oil companies to exploit America for profit at the expense of Americans. All of this is in addition to the fact that fracking is, in and of itself, damaging and should not be done. Let's become really energy independent - use less.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Yelton

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donna Janovsky

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeanne Phillips

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margi Gupton
30581 Kings Valley East

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jimmy Mera

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rita Vait
1617 Market St.

RE: 2012 LNG Export Study

To Whom it May Concern:

Hydrofracturing chemicals are so dangerous that they had to be exempted by a political maneuver under the very act that was supposed to protect American citizens from dirty air and water, huge contributors to climate change. As a New Yorker in one of the most beautiful organic, sustainable regions in the world, I will fight for our collective need for clean air and water. We must get away from fracking here and other places in the United States and Canada. Europe is so far ahead of us in practical, sustainable energy practices. New York in particular can become an American leader in clean, sustainable energy.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John McGee

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bj crochet
122 Isle Of Cuba Road
Schriever, LA 70395

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roger Weingarten

RE: 2012 LNG Export Study

To Whom it May Concern:

I strongly oppose fracking because of all the "unknowns." We should be spending our resources on other forms of renewable energy, not engaging in practices that cause irreparable damage to our environment and possibly our health. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Herbert Herschlag
47 Saddle Rock Road
Danbury, CT 06811

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is an unholy waste of natural resources and should not occur under any circumstances. If Washington D.C. weren't under the thrall of its corporate owners, we wouldn't have to have this 'conversation' in the first place. Quit selling fracking as a reasonable alternative, and start fixing the problems the oil companies have already created. BILLIONS OF GALLONS OF OIL ARE WASTED all over the country in many ways, and you know it. Petroleum engineers talk about this waste all the time. FIX THAT PROBLEM. Stop "leaking" petroleum waste into the oceans. FIX THAT PROBLEM. For god's sake wake up and stop doing even more damage to the planet, all because your kickbacks aren't enough each year to assuage corporate greed. Alison M. Gunn, Ph.D. 2305 27th Place SE Auburn, WA 98002

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Shawn Buller

Please do not do this. Throwing open the door for more demand for fracking, and more fracking operations in the US, is tantamount to selling the health and safety of US citizens for the benefit of gas company profits. This is surely not the kind of economic growth that will benefit more than a handful of people, and it is not worth such a price. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. FRACKING WAS TOUTED TO GIVE US A 100 YEAR SUPPLY. THAT WON'T LAST 100 YEARS IF YOU ALLOW SELLING IT, IN EXCHANGE FOR THE POLLUTION, POLLUTION OF OUR AQUIFERS AND DESTRUCTION OF OUR ROADS. THE TAXPAYER SHOULD NOT BE MADE TO PAY FOR THE DESTRUCTION OF OUR INFRASTRUCTURE SO CORPORATIONS CAN REAP A PROFIT. LIKEWISE, THE NRA SHOULD BE MADE TO PAY FOR THE COSTS OF PROTECTING OUT SCHOOLS AND CITIZENS FROM GUN VIOLENCE. IT IS SAID THAT WALMART STORES, BY UNDERPAYING THEIR EMPLOYEES AND DENYING THEM ON MEDICAL COVERAGE, COSTS THE AVERAGE COMMUNITY WITH A WALMART \$400,000 YEARLY FOR SOCIAL BENEFITS.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kenneth Morey
5415 Cedar Valley Dr.
Loveland, CO 80537

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. ALSO: The gas companies disrespect local interests while installing the pipelines needed to provide fracked gas for export. Private properties, Local roads and pristine nature gets confiscated and damaged for good. These huge companies crush local interests in court. With their huge profits they can afford to hire the "bests", expensive lawyers, covering up their lies. We need the government to protect America and her citizens from this corruption of nature and justice! Or does America really belong to the highest bidder? Go more green and improve solar panels and other natural energy sources. IF you frack, be responsible, respectful and sustainable.. Use the gas for the American citizens and industry, keeping energy costs down.

RE: 2012 LNG Export Study

To Whom it May Concern:

Oh, for goodness' sake I had just managed to quiet the nagging voices in my mind reminding me about drone strikes, indefinite detention of American citizens, raids on lawful state marijuana dispensaries, and other distressing positions and practices of this administration in order to experience unqualified joy at the president's second inauguration tomorrow ... and today I get word that the administration is considering exporting natural gas obtained through the environmentally damaging technique of "fracking." Please don't! I thought the days of grinding porcelain off my molars over benighted actions by the executive branch had ended when George W. Bush left office. Please live up to the progressive promises of your 2008 campaign while you still have time.

Sincerely,

Emily DeHuff

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dan Ireland

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Diane Crowe

RE: 2012 LNG Export Study

To Whom it May Concern:

I have just seen a picture of the US taken from outer space, on which a large pool of light shows up in North Dakota where, six years ago, the unpopulated area showed few signs of civilization. Since then, the enormous amount of fracking and its burnoff of natural gas has created such a field of flame that it is easily visible from space. How can we imagine this has no effect on the environment and the atmosphere? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Instead, please divert energy resources into safe, clean sources of renewable energy, such as solar and wind power. We have answers, but oil money would like to drown out these voices of reason. Don't let that happen, please.

Sincerely,

Judith LaValley

RE: 2012 LNG Export Study

To Whom it May Concern:

Carbon Tax please. Let's align the goals of the country with reality. Start with a 1% tax which the government can change easily. Allow deductions for certified offsetters like carbonfund.org. Offset carbon tax against a variable percentage of income tax. Keep the numbers always on the net revenue side and use the excess to support those who cannot afford to pay the carbon tax. Keep it simple: apply the carbon tax as close to source as possible and in as few places as possible. This will increase the incentive for individuals and organisations to minimize carbon emissions.

Please consider the public policy implications of this over the long term. We should use fracking judiciously if at all, as a way to extend the supply of fossil fuels over time as we focus on developing renewable energy sources. Spiking production will lower energy costs and undermine any incentive to put capital into renewable energy development. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Keiser

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas will end up producing a great deal of CO₂ (to liquify it/ship it) We cannot afford plans that will ultimately accelerate climate change. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Judith Laitman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Wyatt

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.
