RE: 2012 LNG Export Study

To Whom it May Concern:

WHY IS OK TO POISON AMERICA'S LAND AND DRINKING WATER TO KILL AMERICANS, LIVESTOCK, PLANTS SO THAT OIL COMPANIES CAN MAKE HUGE BLOOD MONEY PROFITS OVERSEAS????????? EVEN IF THE GAS WAS CONSUMED IN AMERICA, IS IT MORALLY AND ETHICALLY OK TO SLOWLY MURDER THOUSANDS OF AMERICANS, OUR LANDS AND OUR DRINKING WATER SO THEY'RE CONTAMINATED FOR HUNDREDS OF YEARS? WOULD YOU WANT TO LIVE NEXT DOOR TO A TOXIC WASTE DUMP PROPERTY GORGEOUS AS IT MIGHT LOOK ON THE OUTSIDE? WOULD YOU WANT TO LIVE IN A BEAUTIFUL HOME WHERE THE WATER COMING OUT OF THE FAUCETS IS POISONOUS CAUSING YOU AND YOUR FAMILY SUCH INJURY YOU MIGHT NOT BE ABLE TO WORK AND SLOWLY BE DYING? IS IT OK TO WATCH YOUR CHILDREN SUFFER WITH CONSTANT HEADACHES AND NAUSEA SO THEY CAN'T PLAY, CAN'T GO TO SCHOOL, CAN ONLY LIE DOWN LISTLESSLY DAY AFTER DAY TILL YOU FINALLY HAVE TO FILE BANKRUPTCY, ABANDON YOUR LOVED HOME AND PROPERTY NOW POISONED LIKE LOVE CANAL PROPERTY FOR AT LEAST 100 YEARS? IMAGINE THE IMPACE IN THOUSANDS OF AMERICAN COMMUNITIES POISONED AND ABANDONED SO THERE ARE THOUSANDS OF TOXIC WASTELANDS. REALLY, WHO WOULD CARE ABOUT A FISCAL CLIFF THEN? THOUSANDS OF SICK AMERICANS WHO CAN'T HOLD JOBS, THOUSANDS OF CHILDREN TOO SICK TO ATTEND SCHOOL, THOUSANDS OF PROPERTIES THAT COULD NOT BE USED FOR GROWING FOOD OR LIVESTOCK FOR HUNDREDS OF YEARS. THIS IS WHAT OIL COMPANIES ARE SLOWLY ACCOMPLISHING WHEN PERMITS FOR FRACKING ARE GRANTED. PRESIDENT OBAMA, BE OUR HERO AND REJECT ALL FRACKING PERMITS ON AMERICAN SOIL OR OFFSHORE! YOU DON'T HAVE TO BE THE PROSTITUTE FOR THE OIL COMPANIES AND THEIR GREED BY SIGNING PERMITS. HELP YOUR DAUGHTERS AND THEIR COUSINS AND FRIENDS HAVE A CHANCE TO MARRY AND HAVE YOUR GRANDCHILDREN IN A NON POLLUTED WORLD WITH CLIMATE CONTROL A NON-ISSUE. YOU CAN DO THIS AND BE OUR HERO FOREVER! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jim Creelan

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Griffin-Lewin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rae Lisker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. At a minimum, require companies to report all chemicals used in fracking and require a comprehensive Environmental Impact Statement that addresses possible pollution of ground water or other water sources. Natural gas may release less green house gas than coal, but it is an environmental disaster in so many other ways. We don't need to sell our coal and our natural gas to the rest of the world just because we have it.

RE: 2012 LNG Export Study

To Whom it May Concern:

We have studied the many problems suffered by communities where High Volume Horizontal Hydrofracking is taking place. Fracking brings with it enormous environmental destruction, pollution of soil and water, and life threatening health problems for people and animals. It is a toxic nightmare. It also will increase global warming - i.e. bring as yet more rapid climate changes. PLEASE DO NOT ALLOW or encourage export of fracked natural gas. Our communities pay a steep price and the gas companies will make money hand over fist. This is not fair and it is not prudent. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Stand up to the fossil fuel industry and deny all applications to export natural gas. President Obama, I am grateful for your vision and your courage in exploring and supporting sources of alternative energy, I strongly believe that Hydro-fracking is an insidious process that poisons air, land and water and takes us entirely in the wrong direction. There's too much evidence for this already. And not enough known about the chemicals involved. I usually vote for President reluctantly but in 2008 I was thrilled to vote for you most of all because you had said in an interview that water belonged to the commons. This gave me real hope. I voted for you again in 2012 because I felt you were wise to delay the Canadian trans oil pipeline but am very worried that you might not envision the harm that can be done by fracking. I hope you will have the support and freedom to make the right decisions.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eileen Massey
5924 Herzog St
Oakland, CA 94608

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Henry Coleman
606 College Terrace
Williamsburg, VA 23185

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The damage fracking causes to US groundwater and soil is irreparable and an affront to the US population. It is a practice which, I am sure, would be illegal if it weren't for the legislative power held by the fossil fuel industry. The only (weak) justification for fracking is to provide US citizens with that which is being so poisonously extracted from US soil. To cause further damage so that the already enormously wealthy industry can expand its fortunes is an insult to every citizen of this country. Please do not allow this expansion to happen.

Why should America take all the risks and other countries enjoy the benefits of the resource! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Phillip Notz

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ravell Moss
1453 Harden Dr
Mckinleyville, CA 95519

San Francisco, CA 94109

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

This is not the time to authorize the export of natural gas. Serious questions have been raised—and noted in some DOE reports—about the effect of the hydraulic fracturing process on groundwater and soil. Furthermore, the extraction, transport and burning of natural gas contributes significantly to the climate change which drove last year's devastating droughts, wildfires and damaging storms. This long-term damage to permanent natural resources far outweighs whatever short-term economic gains natural gas exports might provide.

Sincerely,

Joanna Hoyt

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Lester
145 Puanani Road
Kula, HI 96790

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Refining gas and diesel for export has only increased the release of resultant toxins into our American environment with no benefit to its inhabitants, actually raising domestic fuel prices. This is not lost on those countries including Canada who will not allow these detrimental processes to take place within their own borders, destroy their own aquifers and food chains and endanger citizens for the profit of a few. Exporting fracked gas will only exacerbate an already magnitudinous problem within our society. Please make it stop-yesterday. Sincerely, Edward Williams 3800 Sardinia Island Way Sacramento, Ca 95834

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. If we are so desperate for fuel, why would we want to sell it to other countries? And if we're not that desperate, then we can do without fracking and the energy rich companies can invest their profits in nondestructive, renewable, energy sources. They are there. Develop them now while the opportunity is available.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Adiel Arvizu

RE: 2012 LNG Export Study

To Whom it May Concern:

Reject applications to export fracked gas. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. Exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall.

Sincerely,

Brian Carey

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Riehl

RE: 2012 LNG Export Study

To Whom it May Concern:

I have never been more concerned about anything the fossil fuel industry has done or is doing than that of fracking. Animals stop breeding or die in the areas where fracking is underway. Seismic activity increases. They use an extremely toxic cocktail of chemicals (including radioactive ones) that will eventually find its way into our water tables. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Donald Conrad

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I recently learned that during the fracking procedure two thirds of the less valuable gasses are allowed to burn off. That was the reason pictures taken by NASA showed lights in North Dakota that should not have been there and were not present 6 years ago. This certainly doesn't help with climate change.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking does irreparable damage to our environment. But perhaps It may be justified to meet our domestic needs. However, to exchange even greater permanent damage to the American environment for profits to exporters is indefensible. Please fight to preserve our environment as part of the heritage of future American generations. Dr. Leslie Wilbur, Honolulu, Hawaii

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We should not poison our communities, destroy our health, and taint our water to enrich energy companies. Our energy should stay in this country- underground- until we can find a completely safe way to extract it.

Sincerely,

Carol Schuster

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Meg Seltzer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Francesca Lewis

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It sickens me to know that the whole fracking business has little to do with supplying the US with natural gas, but instead is about exporting it so that the very greedy oil corporations can get even richer. There is no thought of holding on to the natural gas for the future of the US. Is this a good reason to destroy the water sources and air of our beautiful country? What is wrong with our leaders that they would allow such destruction to our country. President Obama please start backing the alternative energy market. This is where we will move in to the future with vision and grace. DO the right thing and be remembered for it forever. Do the wrong thing and you will be blamed forever for destroying this country.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne Webster

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roseann Foley
161 S. Amulet Ave.
Mesa, AZ 85208

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We live in the heart of devastating fracking country in rural Susquehanna County Pennsylvania. Our beautiful rural area is not only being trashed; but, we are also suffering from the harsh health hazards, too many to name, of polluted water and air. With little federal oversight and NO Pennsylvania oversight, we are frustrated beyond belief. If our natural gas could safely be extracted then I don't think people would have objections. But, there is too much rush to make money and too little time and effort spent on ensuring that our environment is protected and our health is protected. To allow this to go through would be irresponsible in the extreme and jeopardize our country's citizens, young and old and unborn.

Sincerely,

Barbara Scott

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bruce Zahn

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Is there a law that says if you are a human being, you have to be stupid? Is there a law that says if you are a corporation you have to be greedy and irresponsible? Is there a law that says we have to do the most damage possible to the planet? Is there a law that says if you are a politician then you are bought? This, once again, is a really, really bad idea with really, really bad consequences! Whatever happened to good ideas like conserving energy, solar, wind, geothermal, green power, and so on? This situation of corporations having more rights than individuals or communities or even the entire country is ridiculous, and it must stop! Would you really want to drink from a well contaminated by fracking? Let those among you who would even think to consider this terrible idea have the first sip of the toxic water! And why should we worry so much about the rest of the world's energy needs or wants? Do we not have enough problems of our own? And, yeah, sure, it's trade, and it's money, and it's the economy, but are we going to ruin our lives and our communities and our country so we can ship energy to China after they screwed us royally again and again? And, because China is building hydroelectric dams like they are going out of style, just as one example, I suspect this so-called demand is largely contrived for the usual reasons—corporate profit and corporate power and corporate greed! The problems created by this very questionable industry need to be addressed before we proceed with any more permits! This was not done with the nuclear industry, and we are still trying to figure out what to do with all the waste while it sits in failing storage tanks, probably leaking; this was not done with the pork industry, and we are still trying to figure out what to do with all the waste (that is, the pig poop) while it sits in failing reservoirs breeding bacteria and most likely leaking! Energy technology is advancing so rapidly that these technologically and scientifically outdated forms of energy are on their way out; at the very least, we need to keep our resources for ourselves, and we need to stop taking more than our share of the earth's resources—especially when they are in someone else's country! Better yet, leave it in the ground! And that goes for coal, too! Fruck fracking! Say NO to new permits for dangerous and damaging fracking, especially for natural gas exports! And keep in mind that appointed officials are morally bound to represent the citizenry just as elected officials are morally bound to represent their constituents!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Beverly Walter

It is mind boggling that we would permit fracking in this country so the gas companies can export natural gas to countries that do NOT permit fracking. Remember the same companies that are trying to convince us fracking is safe are the same ones that brought us the Gulf oil spill and the Exxon Valdez. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carolyn Staudt

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. If we are going to engage in tracking, I think we should do it only for our own consumption. We talk about energy independence and that means that we provide what energy we need for ourselves. While we are in the midst of developing a clean energy economy, perhaps it is good for us to do limited tracking for our own use although even that is somewhat questionable but to grossly expand our operations would be sheer irresponsibility when you consider what tracking does to the environment. Please stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

First of all, natural gas is methane, an infamous greenhouse gas, 20 times worse than carbon dioxide. About 9% of this methane leaks out and kills the earth's climate, which kills billions of American trees, causing megafires which burn down people's homes. Second, fracking is a cancer threat to the neighbors who drink well water, lasting for generations after the natural gas has been taken away. No blood for methane. Exporting fracked gas would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Glenda Zahner

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PLEASE STOP this practice.

Sincerely,

Ngar tackenberg

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in an area of the country that will see the effects that fracking has on our land and our environment, first hand. When we suffer the risks of fracking in our neighborhoods, it seems especially deplorable to ship the resulting natural gas out of the country to further enrich a few already wealthy corporate executives.

Sincerely,

Cindy Mullen

RE: 2012 LNG Export Study

To Whom it May Concern:

You said that if enough people fought for an important issue, you would back them. Well, the number of activists against fracking are legion and growing. The governor of Maryland has had the guts to order a health study on the impacts of fracking and is funding it. In 30 days, activists in NYS gave the NY DEC 204,000 comments on the proposed regulations with better documentation than those proposed SGEIS (regulations) which are entirely without documentation or footnotes so it wasn't a high bar to pass. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Beverley Birks

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Amanda Martinez

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anna Johnson

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear Mr. President, I am concerned about what will happen to the millions of us who rely on wells for our drinking water. Fracking is a toxic threat to American communities and also to the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We are counting on you to stand up for the American people, not the hugely wealthy oil interests. Your decisions will determine the kind of world our children and grandchildren will inherit.

Sincerely,

Emily Conger

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live across from a silica sand mine and now have asthma. This summer I will be forced to keep my windows shut and wear a mask while outdoors. Since I live on a farm, this will be a sour inconvenience, plus changing my life style. The money taken by oil companies is threatening my health. Less demand for the sand would ease the raping of our hills and releasing the silica sand into the air. Let me breathe. Do NOT export fracked gas. Clean energy is the focus for our planet.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gerry Acks

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rob west

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tony Vazquez

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We should be concentrating on renewable energy, with things like fracking a temporary bridge to keep our own energy costs low. We should not be giving away resources that cost us so much environmentally to extract. Do not export energy to other countries. Extraction of energy costs us too much environmentally as it is. A financial incentive to dig up even more will hurt us more.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I urge anyone skeptical about this to obtain and view the documentary film "Gasland." It is not propaganda, but an honest portrayal of real, ordinary hard-working, tax-paying citizens that were affected by fracking. There is an explicit scene of a lighter being lit under a running water faucet that resulted in an explosion. That should convince anyone how harmful fracking is to communities and all living beings. It is affecting our livelihoods and economies at rates that will be uncontrollable in just a few short years. Please question the data of the report and do not sign off on anything that will affect all living beings harmfully. Thank you.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Rottinger

RE: 2012 LNG Export Study

To Whom it May Concern:

Assuming the best interests of humanity lay in US reduction of atmospheric carbon levels, fracking is a serious threat to all American communities. Not only is it a toxic risk to proximal areas, fracking expends diverse natural capital and creates pollution. Relying too heavily upon natural gas as a transitional energy source jeopardizes the US goal of lowering our atmospheric carbon contributions. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rose Manak

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We own a home in Weld County Colorado where fracking is rampant. I'm very concerned with the lax regulations and oversight of these potentially harmful operations. Most of these wells would currently be deemed "sub-economic", but if they are allowed to export the natural gas and drive the price up then the industry will want to put more and more wells in regardless of the short and long-term consequences to human and environmental health.

Sincerely,

Margaret Baxter

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joanne Feinberg

Stand up to the fossil fuel industry and deny all applications to export natural gas. we need to develop green energies so we can get off "oil" in all its forms. Outside my window a 10 foot tide come in and out every 24 hours. Do you have any idea how much power/energy is there sitting for us to use it? All up and down the coast there are many . many good sites to harness this potential which would allow us "freedom from foreign countries" oil. WAKE UP AND FIGHT FOR IT

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. A world that runs on natural gas is a world wrecked by climate chaos and extreme weather - deadly superstorms, wildfires, droughts, and floods. People living near fracking operations cope with contaminated, inflammable water, cancer-causing air pollution, huge fleets of diesel trucks, chemical spills and pipeline explosions. Answer the call of history, stand up to the fossil fuel industry. Reject applications to export fracked gas. Sincerely, Margo Lee Sherman 111 East 26 Street Apt #A-7 New York, NY 10010

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bryan Keyes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and to the climate of the planet. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. For the sake of this planet and all beings on this planet, please stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Hi, "Bridge fuel" is an invention of the Industry - it's all marketing... smoke and mirrors at the expense of the public. Add to the above, the the gross amount of water required and the inability to clean and correctly dispose of it, property rights out the window with "Compulsory Integration" and there is absolutely no reason to allow the Gassers to have their way. As a Fly Fisherman, NYState Fishing guide and NY property owner in the 'drilling zone' I ask that you send the money and time working more with Renewables rather than the same old fossil fuel addiction. Respectfully, Craig Buckbee Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Harrington
5420 Erickson Drive
Granite Bay, CA 95746

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. And as we get sick, oil and gas companies increase their already enormous profits. Our government was established to protect our people - a government of, for and by the people. But it is failing abysmally as it values the interested of the companies, pension funds, and general investors (not to mention the head mangers and advisers) of the oil and gas industry. Allowing fracked gas exports will dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. You must stand up to the fossil fuel industry and for the people by and deny all applications to export natural gas.

Sincerely,

Jane Fasullo

RE: 2012 LNG Export Study

To Whom it May Concern:

*** "Fracking" is BAD for ALL things. Why don't you know that-? Susan in Nashville *** Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Heffernon

RE: 2012 LNG Export Study

To Whom it May Concern:

We need seriously to stop burning carbon sources all over the world! Not only is drilling for the gas dangerous to our communities here, but burning it even in foreign countries will worsen climate change all over the world. Cut it out! Develop solar, wind and other energy sources NOW instead!

Sincerely,

Mary Belle Wells

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking creates terrible problems with the water supply. It can destroy freshwater wells, which has driven some people from their homes in Wyoming and New York.

Sincerely,

Marian Hennings

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We need to reduce fracking, not expand it, especially because of the effects on climate. The methane releases are a potential hazard since it is a potent greenhouse gas. Liquifying fracked gas produces much more CO2 than using it domestically so contributes more to the greenhouse effect. This just doesn't make economic or environmental sense.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Cuda
7716 Brashear Street
Pgh, PA 15221

RE: 2012 LNG Export Study

To Whom it May Concern:

I do not believe fracking is safe and non-polluting. I think we must have more information about actual effects and costs to the environment. I think fracking constitutes a threat to our water resources and will place our country in greater jeopardy in the long run. I urge restraint in developing more fracking worldwide, especially in regards to impacts on climate change. Please be more careful, deliberate and respectful of our limited resources.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margo Salone
71 Matherville-Frostbridge Rd
Shubuta, MS 39360

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The methane emissions from the entire process of fracking for natural gas and all of the other factors in the process of producing usable natural gas make it possibly as dangerous in terms of global warming emissions as coal. Please get your information from the people who know, the environmental organizations that are not beholden to the natural gas industry, and decide based on the facts, not distortions that lobbyists are promulgating. I urge you to make climate change a major focus of your second term - we cannot wait another 4 years to get major action on this urgent issue, and what if you are followed by a Republican? It is urgent and absolutely imperative that you address this issue that is already, and will soon even more, affect us all over the planet. If your legacy does not include leading on this issue, all the rest will not look like much. You must find the courage and support to act strongly. Please lead!! Thank you.

Sincerely,

Sharon Nolting

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Besides the CO2 factor, fracking demands many millions of gallons of fresh water to bring natural gas to the surface, and to my knowledge, this water is not recycled but disposed of as waste. This is unconscionable since fresh water is decreasing around the US and the world. So, fracking is not as environmentally friendly as the gas industry would like us to believe. The administration should not fall prey to the same myths that the tobacco industry perpetrated on us years ago regarding cigarettes. This is not an addiction we need. Thank you.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Stephen Johnson

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pamela Stilp

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paul Martinsen
208 Winegar Ave. E
Monmouth, OR 97361

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting natural gas will increase global warming and the pressure to do more fracking. If fracking is safe, why to gas companies have immunity from environmental laws? Why aren't they willing to let us know what chemicals they are injecting into our water supply? Fracking is a toxic threat to American communities and the climate. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorothy Ross

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter Yff
10840 Cook Ave.
Oak Lawn, IL 60453

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I'm especially opposed to the use of toxic chemicals needed to do the fracking. Where do they go? What happens to the soil and water, and air around the sites where they are used? None of the research needed to answer these questions has been done. The fossil fuel industry does not care about any of the risks, only the bottom line THEIR bottom line!

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jennifer Sorg
105 Nita Drive
Seffner, FL 33584

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Hundreds of people across the U.S. are being affected by fracking. Their wells are being contaminated, their ponds are contaminated, the toxic fumes from the chemicals used are adversely affecting them. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Billie Leonard

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. P.S. 129 degree's in Austrailia. This is the extreem climate we are heading towards. Dramatic actions need to be taken to reduce our impact on the climate. One action could be: burn off at wells and refineries is wasted energy. Many coal burning electric plants could be converted if this wasted resource was burned efficintly. Many bold actions need to be taken or we will be making a planet that no one will be able to survive on.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. According to the National Oceanographic and Atmospheric Administration [NOAA], methane leakage rates from fracking are 9% roughly four times higher than the rate would make fracking climate-friendly. Methane is a potent greenhouse gas that warms the atmosphere 72 times greater than CO2 over a 20 year period. In other words, fracking will increase global climate problems. Don't permit even one natural gas terminal to be built. Don't do anything that will promote fracking until the amount of methane leaking or that might be leaked into the atmosphere is reduced to 2% or less.

RE: 2012 LNG Export Study

To Whom it May Concern:

Really? We haven't had enough evidence that fracking is destroying the environment?! Why this practice continues I still haven't figured out. To allow further expansion of this poisoning of our land and water is irresponsible. Despite all the talk about trying to help heal the planet, I've seen program after program approved which will do nothing but destroy it. Please do not continue down this path. I voted for you so that you would help defend our country from the damage being done by Big Oil and Big Gas (despite your so-far awful record on this front) as it seemed with SuperStorm Sandy people were finally beginning to realize the effects of our fossil-fuel policies. Please don't disappoint me further. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kenneth Stinnett

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Artemis La

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The industry tried to tell us that fracking gas would make the US energy independent. But shipping our supplies overseas doesn't accomplish that. It just makes them a lot of money at the cost of our health and environment, not to mention the cost of clean-up and repairing our infrastructure. Stand up to the fossil fuel industry and deny all applications to export natural gas – for the sake of our children and grandchildren.

Sincerely,

Janet Muir

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Short term profit motives vs. long term environmental damage are never good decisions. The fuel industry will suck the regions dry and then leave, leaving messed up wells, roads, fields, towns in their wake. Most of the jobs go to out of towners and they live in company housing so any economic benefit to fracked areas is an illusion. Please think of long term costs and say NO to exporting natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gordon Miller
6 Union Street
Waterbury, VT 05676

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Victoria Ross

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Clean water is becoming more valuable than cheap gas.

Sincerely,

Daniel Graham
123 Grace Ave.
Chapel Hill, NC 27517

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting "fracked" natural gas would contribute to prosperity, but at a high cost, in adverse environmental impacts and poisoned groundwater. This kind of "prosperity" is not worth it. Energy companies should not be allowed to prosper at the expense of the environment and people adversely affected by fracking operations. Poisoned ground water would extract a severe toll in human suffering.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marcella Hudson
527 Brick Church Ln
Whites Creek, TN 37189

RE: 2012 LNG Export Study

To Whom it May Concern:

Life in my home region of north-central West Virginia has changed dramatically, and not for the better, since the start of the shale-gas boom. Poisoned drinking water, polluted streams, increased air pollution, deforestation and degraded landscapes, dangerous heavy truck traffic on narrow country roads – all these problems have arrived along with the fracking. Allowing new permits for natural gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please do not allow the gas industry to destroy more land, water, homes and farms around this country. I invite you to visit this area of the nation to see for yourself the kind of damage that is being done by fossil fuel extraction. And I urge you to stand up to the gas industry and deny all applications to export natural gas.

Sincerely,

Autumn Long

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I thought this was about energy independence. Lets turn some coal power plants into natural gas plants. Or increase use of natural gas in transportation. But exporting this "clean" energy so we can keep using cheap coal reveals fracking as just another way for Big Oil to make money by destroying the environment. The Obama administration should stop all fracking if we are producing so much natural gas that we need to export it.

Stand up to the fossil fuel industry and deny all applications to export natural gas. The data on the toll fracking is taking on the land should be enough to give us pause. Earthquakes reported in places that never had them. The common denominator? There's fracking in the area. It's dangerous to change underground pressure. It's time to look for easy to access, clean and easily renewable energy. We don't have to use every bit of natural resources (oil, gas, coal etc) that's left. We can move on to cleaner, safer sources. And I'm not talking about atomic energy which comes with its own set of dangerous issues. Please don't allow this destructive technology.

Stand up to the fossil fuel industry and deny all applications to export natural gas. NO - NO - NO - NO!!!!!! What isn't being understood about the dangers and pollution of the fracking process? We cannot afford to continuously damage our fragile planet as we have been! We need to continue working on healthier and less harmful/polluting sources of energy. The evidence is clear, and to — with the dirty money and energy of the coal, oil, gas industries have continually inserted into the equation. Their money (and their continuing greed, tax breaks and subsidization) should not be allowed to influence any part of the discussion. NO FRACKING, NO OIL DRILLING, NO COAL DIGGING AND SHIPPING. Leave the planet whole, and continue our thrust toward clean, harmless energy for ALL!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Butler

RE: 2012 LNG Export Study

To Whom it May Concern:

As an environmental scientist, citizen and taxpayer, I have grave concerns regarding "fracking". This method of fossil fuel extraction uses millions of gallons of water and contaminates crucial groundwater supplies. Currently in MN and much of the Midwest we are experiencing a drought, water is a precious commodity that we can ill afford to have contaminated by fracking. Fracking also does not further our need to get off of fossil fuels to ameliorate the effects, e.g. drought, of climate change. Please do not allow this industry to further sully our water and disrupt our climate. We need bold new answers, not business as usual.

Sincerely,

Catherine Zimmer

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Adam Gentner
6600 Warner Ave Unit 244
Huntington Beach, CA 92647

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ryan McClure

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Larry Cantwell
310 Grant Ave
Dumont, NJ 07628

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynette Meadows

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a huge geological and human experiment, as the 2005 Energy Bill removed it from Federal environmental laws. State laws are threatened, and Towns and individuals are unarmed facing giant energy conglomerates that hold leases as co-liable. It is a criminal activity, is poisoning our soil, water and farmland leads to wildlife, wilderness and human diseases and deaths. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dr. Hal Bauer

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lucy Thompson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

B Newman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States undermining the phasing out of coal in the U.S. and affordable electricity for people of all incomes. Ending permits for new fracking is just a piece as well in getting us to make the shift to a cleaner and sustainable energy future w/o the chaos that will result from climate change of more than 2 degrees Celsius.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Camilla Spicer

RE: 2012 LNG Export Study

To Whom it May Concern:

Shale gas has been touted as the way America would become energy independent. To allow it to be shipped overseas before our own country has even been able to take advantage of it will negate this benefit. Not to mention the slew of environmental problems that will arise from the shipping of liquified natural gas and building all the infrastructure needed to accomplish this. Furthermore, I am opposed to permitting this industry to continue to expand when it has been shown time and again that hydrofracing (the method used to extract the gas) is NOT safe. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

We have more carbon in seabed methane hydrate deposits that are already leaking and need to be captured and stored ASAP to stop the LEAK than we have in all proven fossil fuel reserves other than these already leaking seabed methane hydrate deposits. We most emphatically do NOT need to frack any more gas wells in the foreseeable future. Those seabed methane hydrate deposits will more than displace both all our coal and all our natural gas for the entire time we have left in which to replace fossil fuel with renewable energy before Earth's climate is ruined. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sandie Brown

RE: 2012 LNG Export Study

To Whom it May Concern:

I just watched the documentary "Gas Lands" about fracking. It was horrifying: I had no idea the extent of the industry and its poisonous effect on the environment. To think that this energy is actually exempt from the Clean Air and Clean Water Acts is an outrage. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

The whole idea of selling our natural gas to foreign countries is anathema to everything the gas industry has claimed about "freeing us from Middle East energy imports", giving us a "cheap, clean domestic energy source right beneath our feet" and all the other "patriotic" false claims the oil and gas industry has claimed for several years in print and broadcast media. The simple fact is that both China and Russia have proven gas reserves that dwarf ours, and both can sell to and deliver gas for much lower prices than American gas. Both will have the ability to delive that gas long before new export terminals in America can begin operations. We will get all the pollution, illnesses, deaths, depressed real estate values, destruction of our drinking water, increased air pollution, higher cancer rates and all the other adversity of drilling with none of the benefits derived from it. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marc McCord

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ruth Seeley

RE: 2012 LNG Export Study

To Whom it May Concern:

Natural Gas may be a wonderful option for the future, but current fracking practices are not safe. The dangers to the environment, the ground water and the community are too high to move forward at this time. This is an industry that needs safe guards in place and a concern for safety over the almighty dollar. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I invite you and your family to spend a week in what is known as a gas patch; if you did you would be doing all you could to ban fracking. It is taking people's homes and health daily. Fracking is deadly to people, animals, land, water, and air; regulation will not work because the oil and gas industry continues to enjoy exemptions from major federal laws affecting our air, lands and water. These include the: Safe Drinking Water Act Clean Water Act Clean Air Act National Environmental Policy Act Comprehensive Environmental Response, Compensation, and Liability Act Resource Conservation and Recovery Act Toxic Release Inventory under the Emergency Planning and Community Right-to-Know Act You can support \$ or the people - the choice is yours - don't sell us out!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anna Spangler

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. There is no way to safely inject 586 chemicals into the ground, where they combine to make other chemicals. There is no way to detoxify the million gallons of waste water created at each way. There is no way to restore contaminated groundwater. Thoughts of cleanup are delusional. It is always better not to make a mess in the first place. Allowing fracked gas exports would be disastrous for the future health of our American bodies and our American economy; it trades short-term gain for long-term suffering. Resource extraction is usually of limited value. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lois Sturm

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Laura lee

RE: 2012 LNG Export Study

To Whom it May Concern:

The economic impacts and energy policy ramifications of LNG export far exceed the limited scope of consideration presented in the Department of Energys (DOE) report: Effect of Increased Natural Gas Exports on Domestic Energy Markets. Any authorizations to export LNG will directly and dramatically affect the level of shale gas development in this country, including development of supporting industries and infrastructure. Therefore any credible LNG economic study, particularly one purporting to be a cumulative impacts study, must include analysis of the wealth of harms associated directly and indirectly with the increasing shale gas development that will be supported and incited by LNG exports. Shale gas development presents an unparalleled level of harm to drinking water, air quality, food supplies, and public health that equate to high economic burdens for the United States economy and taxpayers. These are economic burdens that any accurate assessment of the impacts of LNG exports must fully explore and consider. Shale gas development and its infrastructure induces or contributes to deforestation, land compaction, wetlands destruction, and increased earthquake potential, as well as creates increased potential for flooding and erosion of public and private lands that must be responded to and addressed by homeowners, communities and local, state and federal governments. To the extent that LNG will support, induce and encourage more shale gas development it will be increasing these harms and the associated costs; as such these costs must be considered in any credible analysis of the economic ramifications of LNG. The most recent estimates of economically recoverable shale gas reserves estimate approximately 20-40 years of supply at current domestic consumption. Increasing LNG exports will reduce the timeline of this supply. As a result all of the hundreds of billions invested in transforming this countrys energy infrastructure into one dependent on shale gas will quickly be lost as the quickly dwindling shale gas supply will necessitate the need for a new energy infrastructure. Upon depleting its shale gas reserves in just a matter of decades, America will be faced with an abrupt and expensive shift to new energy sources and corresponding infrastructure. This 20-40 year timeline becomes further abbreviated if LNG exports occur. Investing in increasing shale gas development including exports brings with it high opportunity costs for this country also ignored by the DOE report. Investment in LNG and shale gas development means there is not investment in truly sustainable energy development, in corresponding quality infrastructure for sustainable energy, in the technological advancements necessary to ensure U.S. leadership in renewable energy sources, and in the use of taxpayer dollars for achieving other high priority job creation and economic advancement goals. These tangible costs were ignored by DOEs study. Furthermore, scientific research and data increasingly support the proposition that shale gas development when combined with LNG export is a net greenhouse gas polluter as potent as coal, and likely worse. To the extent that authorizing LNG export will induce and encourage more shale gas development - and therefore more methane and CO2 emissions exacerbating climate change - it will be increasing the costs associated with responding to, and rebuilding from, the extreme weather events that will inevitably result. Examination of these foreseeable costs were likewise absent in DOEs study. The 2012 LNG Export Studys failure to examine the aforementioned and other relevant costs in its analyses renders the report a superficial and stunted picture of LNGs economic ramifications. DOEs study simply fails to provide decisionmakers the complete, accurate knowledge necessary to render an informed decision. It is incumbent upon DOE to consider these ignored economic and environmental costs in determining whether LNG export to non-free trade agreement nations fulfills the public interest standard set forth under the Natural Gas Act Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Respectfully, Susan DeSantis

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jacob Smith

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is unacceptable to me that export of domestic gas production is being considered when this country is on a path to energy sustainability - not importing foreign oil. This export policy is clearly driven by energy company profits, not national energy polict. Only a few years age we were faced with the prospect of a Delaware River terminal to IMPORT condensed gas!!!

Sincerely,

Russell Craig

RE: 2012 LNG Export Study

To Whom it May Concern:

My home town of Dryden, New York, has been fighting to protect its borders from the threat of fracking, something it has never had to deal with in its hundreds of years of existence. The process of fracking poisons communities and the climate, but we are told that fracking is necessary to decrease our reliance on foreign oil; if this is so, WHY IN THE WORLD WOULD WE EXPORT IT? That defies logic. Allowing fracked gas exports would undermine the patriotic argument for allowing fracking in the first place, and dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. PLEASE stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christine Mosby

RE: 2012 LNG Export Study

To Whom it May Concern:

We need to consider all the costs of energy production. In my very urban, earthquake-prone community fracking is causing cracks in homes. We don't yet know what it's doing to our ground water, because the chemicals used are a secret. Germany manages to generate a lot of solar energy. Surely with our vast expanses of sunny climes, we can do a better job. Let's shift the focus away from fossil fuels and onto putting solar cells on rooftops,

Sincerely,

Melissa Stoller

To Whom it May Concern:

Exporting liquified natural gas is not in The United States' best interest for achieving energy independence. Also, hydraulic fracturing is a toxic threat to American communities and the climate. Allowing gas exports would dramatically increase the scale of and demand for gas extraction in the United States by giving the fossil fuel industry access to foreign markets. Please deny all applications to export natural gas.
