

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeanne Ginsberg
81 Knollwood Avenue
Huntington, NY 11743

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kimberly Francis

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. As Americans we have a good view of some of the processes that damage third world nations. We should know better than to begin those processes here. There are options to fossil fuels. We have the technology, but greed, which is not good, can trump good technology if we participate in that greed.

Sincerely,

John Ritter

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Candy Blesse

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PLEASE THINK ABOUT OUR KIDS FUTURE. SINCERELY MEL MICHAEL FISH. 270 S.W. WAKONDA BEACH RD. WALDPOROT OR. 97394

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ron Foster

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lawrence David

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is undoubtedly a major toxic threat to American and world communities and the climate, and is currently being debated at all in order to achieve its advancement as quickly and far as possible before its ramifications become known and the entire process gets shut down. Poisoning the earth under the premise that humans can control the use AND disposal of manmade toxic chemicals flies in the face of daily evidence to the contrary. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets, once again clearly choosing monetary considerations over those of humanity, the earth and common-sense. You (and your children) can't drink money, and no amount of money can buy back what has been squandered. You have been charged with and HAVE ACCEPTED responsibility for the welfare of all. Wake up-Grow up-And stand up to the fossil fuel industry before it's too late for them AND us: Deny all applications to export natural gas...PLEASE!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann Alter

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Frankly, I am deeply concerned about the likely damage that will occur across wide swaths of this country, both on the surface and sub-surface, particularly as it relates to the quality of safe drinking water which is more and more in demand as the population on planet earth is growing quite dramatically reaching heretofore unprecedented levels. While energy independence is a noble goal, it should not come at the expense people of all ages and colors, races and ethnicities.

Sincerely,

Hygi Waetermans

RE: 2012 LNG Export Study

To Whom it May Concern:

In the first place, fracking seems to release Methane - a potent greenhouse gas. No fracking should be done until Methane can be captured and used. Secondly, in the long range we want to get off fossil fuels entirely. Natural gas is a stop gap measure along that road. If you issue export licenses, there will be a huge corporate special interest in keeping this gas production alive. What I admired most about you, the reason I donated and voted for you is that you are a long range thinker. PLEASE consider my points and deny all applications to export natural gas.

Sincerely,

Susan Schnur

Fresh water is a huge issue in California, where I live, and everywhere else in America too. Fracking is a huge danger to our freshwater supplies, please don't allow this form of gas extraction to continue until the Fracking industry is held accountable for preserving the water tables in their areas. Exporting natural gas might be a money maker, but at the cost of much more disease and destruction here. It's sooooo not worth it! Please preserve the integrity of our water tables! Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lynn Steiden
6493 Holtkamp Rd

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ayoub Misherghi
1535 Geysers St

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fugitive emissions from the process are too high. Also, reduction of carbon in the atmosphere should be a top national security goal. The switch cannot happen with the slow pattern of transition from wood to coal, etc. The model of previous market changes are a faulty analogy. It takes direct intervention and shut down. It is a politically difficult and time consuming process even if we move as fast as possible. Start here.

Sincerely,

Hugh Peach

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maureen walker

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Matthew Burgos

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please reject all applications to export fracked gas.

Sincerely,

Deborah Bauder

Fracking is one of the most destructive types of mining I have ever heard of or seen in my life. The human and animal damage is shameful and the destruction to the earth unforgivable for MONEY!! When is the last time you took a ride to the areas that they are fracking. How about having a nice cold glass of water from a home in the area of fracking. You would not do it. You would not allow your children, your dog and anything you love within a 100 miles of an Fracking site!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. STAND UP FOR THESE PEOPLE, THE ANIMALS AND LAND THIS PRACTICE IS DESTROYING!!!

To Whom it May Concern:

Considering that fracking is highly expensive, toxic and can't be cleaned up – this is a disastrous idea. The U.S. is supposed to be a world leader, not another scrapper willing to do anything for money. Exporting fracked gas would dramatically increase the pollution and the damage it does. Fracking is NOT the way to solve the world's energy problems or our economy. The price to the health of our people and our land is too high. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter LEIBFRED

RE: 2012 LNG Export Study

To Whom it May Concern:

Take away the politics of the research and the money input to provide the "research data", it becomes very clear as to the extreme damage fracking does to the local environment (ground water/surface water/air pollution) and the worldwide environment (increasing global warming). Does anyone EVER think beyond the immediate profit motive anymore? What about the generations of kids and grandkids and the planet being left to them? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Georgia Maydew
49470 Ali Court

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kevin Parks

RE: 2012 LNG Export Study

To Whom it May Concern:

There really is no gas shortage. If you allow this, gas prices in America will stay artificially high; just to line the oil companies pockets. Do the right thing. Stop fracking and certainly don't export it. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wendy Pollitz

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paul Antram

Jersey Shore, PA 17740

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It depletes invaluable fresh water supplies, it greatly pollutes the earth both in the injection process to force the gas out and in the disposal of the waste water without adequate measures to know if we will regret it in the long term. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Abe Siebert

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Landolt

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sharyl Swink

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne sasinka

RE: 2012 LNG Export Study

To Whom it May Concern:

The extraction of natural gas and petroleum by hydraulic fracturing methods has demonstrated a clear and unacceptable hazard to communities and the natural environment. To allow the export of gas produced by these methods would surely increase the demand for such fuel and result in even more of this kind of production. Please deny all applications to export natural gas.

Sincerely,

Jerrold Allen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Instead of trying to destroy the Planet why not lead the fight to save it. Lead the world with Solar and Wind power, a smart Electric Grid and Electric Cars. they will put our people back to work and save us money in the long run because the cost of wind and sun doesn't go up.

Sincerely,

Gordon Howard

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Tefft

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please do not put the short term profits of a few above our need for clean water to drink and clean air to breathe. We can't drink and cook with and bathe in profits from fracking. What is best for our country, our natural resources and our health and small businesses, is energy from renewable resources - like solar. Please let your legacy be one where you did what is best for our country, not that you helped a few profit at the expense of a healthy future for our children and grandchildren.

Sincerely,

Pat Westwater-Jong

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. My family lives next to the largest urban oil field in the US. Our local officials are not helping our community. PXP the lessor of the oil field is chumming the political waters here with 'donations' to council people and county supervisors, making it hard for the citizens to get any traction with banning the dangerous practice of fracking. We need your help by cutting off the revenue stream, making it less attractive and profitable. Please lets not let our Baldwin Hill suburban oasis turn in to Bohpal India!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gordon Hall
9301 Ne 23rd Ave
Vancouver, WA 98665

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Lord

RE: 2012 LNG Export Study

To Whom it May Concern:

It's bad enough that we are potentially and actually despoiling our domestic groundwater via fracking ostensibly to "wean America off of Middle Eastern oil" and to secure our domestic energy needs but for the Federal Government to sanction exportation is incredibly foolish. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I raise beef cattle in northeast Ohio, with a thick layer of Utica shale underneath. The gas and oil from this shale cannot be extracted without doing harm to the vibrant and growing local sustainable food economy here. It is not right that we export extracted fuels at the expense of our country's farmers and food systems. Don't do it!

Sincerely,

Mardy Townsend
7490 Noble Rd
Windsor, OH 44099

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gay Wiseman

RE: 2012 LNG Export Study

To Whom it May Concern:

I think it is disingenuous for the US Government to say that we need to become energy independent while at the same time allow the export of extracted fuels from within US (in particular, that from public lands, but also from private residents' properties without their express permission and benefit though NOT at the expense of neighbors' water and air quality!) to other countries. The process of extracting natural gas via hydraulic fracturing pollutes air and water (on top of which, not all of the chemicals are even known because of so-called 'proprietary' bulls**t), and can affect communities in very real and very negative ways. For the US Government to say that they will allow extraction companies to to export fuel so that these companies can make a buck (at the expense of quality of life for US citizens) says: I don't care about your air quality, your water quality, your quality of life, or the future quality of life of future inhabitants. What I really care about is that these companies pay their investors; what I care about is that billionaires continue to make billions in profits (and will hopefully share them with me if I play my cards just so...) while your quality of life and basic needs, dear US Citizen, mean less than nothing to me.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Stewart
4615 37th St. N.
Arlington, VA 22207

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ricardo Lazalde
5726 126th Ave. N.
Clearwater, FL 33760

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Every fracking well wastes tens of millions of gallons of fresh water that cannot be reinstated into the natural system. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Stand up to the fossil fuel industry and deny all applications to export natural gas. YOU OWE IT TO THE AMERICAN PEOPLE TO TAKE A SERIOUS LOOK AT THE FACTUAL INFO WE HAVE RESEARCHED & PROVIDED ABOUT FRACKING. THE EVIDENCE IS OVERWHELMING! ALSO, SEE THE EXCELLENT DOCUMENTARY, "FUEL." IT DEMONSTRATES HOW ADVANCED "GREEN" TECHNOLOGY IS & WHY WE DON'T EVEN NEED SHALE-FRACKING. (See www.thefuelfilm.com.)

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lewis Murdock
3541 Kent Creek Rd.
Winston, OR 97496

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do not allow the export of natural gas extracted through fracking. Since Americans are forced to bear the health impacts of fracking waste the very least you can do is to keep the economic benefits at home by allowing sales only to the US market. Exporting to the almost limitless global market would also drive up the practice and further pollute our precious homeland.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marion Chamberlin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking for natural gas is a destructive process that fulfills short term goals while sacrificing the health of the natural world which is not only our life-support system, but the future generation's. This industry creates more pollution, destroys natural habitat that is trying to heal, pumps deadly chemicals into the ground poisoning the water supplies. We need to stop the fracking industry, not expand it. If you allow the fracking industry to continue and expand, you further destroy our already battered, fragile ecosystems in which the very foundations of life exist. Destroying natural habitat, air, water and soil destroys diversity and increases sickness and disease. Look at what is going on - diseases are on the rise simply because of the imbalance of destroying natural habitat - which fracking does, on all levels (canopy to underground) - everything dies.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Felix Omai

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The main reason for fracking is profits for the fossil fuel industry. The goal is NOT to provide jobs for Americans. The risks and consequences to Americans, our climate and our ecosystems far outweigh any benefit. What has happened to R & D on non-fossil fuel energy alternatives? Again, we are looking at lining the pockets of the large fossil fuel industries and turning a blind eye the effects on people here at home. What effects? Pollution of ground water with contaminating chemicals, earthquakes, radiation exposure, fatalities and birth defects of livestock (which our farmers depend upon), and on and on and on. It seems that the Obama Administration Department energy, which whitewashed the effects of fracking in its report, doesn't care about the American people. It's all about profits for the fossil fuel industry, which goes back to money that buys elections. The government is supposed to protect the American people, not the bottom line of Wall Street. NO, NO, NO on

RE: 2012 LNG Export Study

To Whom it May Concern:

We need to stop allowing this dangerous method of extracting natural gas. We are poisoning our drinking water, knowingly, willingly, for money. That's pathetic and despicable. There are better ways to make money. We need to come up with better ways to obtain energy. "Clean coal" fracking, nuclear power. None of these methods are good for the environment or the health of people in either the short or long term. I am so disappointed in this administration. Time and time again you appoint these insiders to run various departments. These people caused the problems, they aren't going to fix it. You need activists, community volunteers with a passion for doing what's right, regardless of the difficulties they face. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We were told the need to frack for natural gas as an alternative fuel was to help the US be energy independent. It now appears it is just another powerful extractive industry planning to make profits at the expense of ordinary Americans. The oil industry has now become the gas industry, only now no one is taking into consideration the long term damage to the land and environment and possibly human health. Stand up to this.

Sincerely,

Yvonne Becka
147 S. California Drive
Coal Center, PA 15423

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David And Susanne S. Arbiter

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is NOT a suitable solution to our energy needs. I am DEEPLY disturbed by the lack of transparency regarding the risk to ground water tables and farm land. Worse still, though, would be to allow fracked gas exports. They would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I do not want my tax dollar used to facilitate this endeavor.

RE: 2012 LNG Export Study

To Whom it May Concern:

One of the justifications offered by the fracking industry is that it helps make the USA more energy independent. Well that is true - ONLY if we sell all of it DOMESTICALLY. So this is another example of how the fracking industry lies to us. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cassio saverino
7273 W Bloomfield Rd
Peoria, AZ 85381

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I did not work for your re-election to promote GOP solutions to energy or dismantel the purpose of EPA protections for the poisoning of our lands water, soil and air. This is unacceptable and needs research study and all practices need to stop until such findings are made. We suffered under the leaded gasoline products, while Americans were being poisoned and deaths occured because of profit over peoples health and welfare before it was stopped. Will you put Americans lives at risk for temporary profits of energy corporations? Don't do it, Sir. Please!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elliot Banse

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Research more on the terrible impact fracking has on the environment (which includes humans and animals and, I would add, land) and you will see how devastating such a procedure is. We need to focus on renewable sources of energy THANKS for your help in this!

Sincerely,

Eileen Bill

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bryan Cloninger

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have no inspections of thousands of gas wells by the state in WV.

Sincerely,

Gary Nelson
4511 Pious Ridge Road
Berkeley Springs, WV 25411

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate, and in a state like California, with its vulnerability to earthquakes, it's a disaster in the making. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sarah Lifton

RE: 2012 LNG Export Study

To Whom it May Concern:

The most valuable natural resource we will have this century is potable water. We must do everything we can to preserve and protect this national resource. Protecting our fresh water from pollution should be one of our nation's sacred duties to the future. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Neuendorff

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Linda Jenkins

RE: 2012 LNG Export Study

To Whom it May Concern:

Methane is 20 times more potent than CO₂ as a greenhouse gas. Releases of methane are common during the fracking and transport of methane and will only get worse with overseas shipments. We do not even know the extent of the toxic chemicals currently used in the fracking process. Please deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear Mr. President Please give us Sustainable Development Charlie Hackbarth The sun continues to shine on the bloated face of corporate rule as it nurtures the political goose that hatches its golden eggs Like it or not, We the People are fuel for this fracking machine which has the audacity to call itself equal opportunity It rolls over humanity in the name of free enterprise oblivious to the suffering beneath its tracks apparently unaware that the venom of its greed will some day reach the pedestal of its offspring Driven by a scrap of hope thrown out by Old Liberty we consume our own flesh in the global race for power knowing that future generations will surely drown in the festering aftermath of the spoils Flexing muscles in defiance, our political locomotives sit at each end of the train guarding loopholes, refusing to compromise Our frustrated engineer, one hand chained to the brake the other clawing for the throttle screams out like a Munch painting Finally awakened by the commotion, Engine 99 moves to the front of the train I-Think-I-Can it puffs as it strains in desperation to pull its passengers to the land of moderation A land where the needs of the present are met without compromising the ability of future generations to meet their own needs

Sincerely,

Charles Hackbarth

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Pam Dix

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is a crucial issue for people who live in New York City. I am a member of Queens Community Board 11, the Board has discussed fracking often, we are strongly opposed to it and its results. We look for the administration to protect us and not the gas industry or, for that matter, the airline industry that is making our lives miserable with increased noise at JFK and LGA – while we have absolutely no response from you.

Sincerely,

Janet McEneaney

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Darley Adare

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Gambrel

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Klein

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. GREED is simply a stunning motivator. Black-energy companies would destroy not only OUR beauty but also OUR drinkable water and OUR breathable air...for the right to profit by serving black energy to EVERYBODY ELSE. And it is greed that makes our black-energy companies BLIND to the global suicidal consequences of their actions. The American people MUST say NO, NOW.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sidney Pearson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sarah Glosson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I am aware that we need energy sources, but must they come at the expense of endangering our own citizens? It seems to me that when we put our own citizens in harm's way via ruining their land and water to send the products elsewhere is particularly hypocritical. Surely there must be another solution that needs to be sought.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bourret Terry

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There are alternatives that you should be fighting to get into place instead of spending more time and resources going down a dead-end.

Sincerely,

Lori Tempestini
2808 Clay St

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do not allow fracking until the process can be made safe. Our ground water cannot be put at risk, possibly endangering the lives of those who drink it. Let us know what chemicals you are using in the process. Show us that all these chemicals pose no threat to us or the environment, and then we will talk about allowing the process!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Greg Nicholas
Hutton Place
Charleston, SC 29407

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Luz Bustamante

RE: 2012 LNG Export Study

To Whom it May Concern:

Haliburton is fracking for natural gas in Oceana County near Lake Michigan. In late evening on the Thursday after Christmas, we went outside and could smell a strong odor of natural gas. We were very concerned one of the propane tanks from our neighbors was leaking. We called the natural gas supplier and had to leave a message –no one ever got back to us which was a little disconcerting. So we called Oceana County Central Dispatch. The response we got was the flame had blown out where the fracking was taking place and no one from Haliburton could be reached. A message had been left for someone in Texas! That made me feel real safe... Oh, and we were also told there was nothing to be concerned about!! To put this all in perspective, we live 6 miles from the fracking site, on the shore of Lake Michigan! And I am to trust that Haliburton cares about environmental issues surrounding fracking. I THINK NOT!!!

Sincerely,

Chris Vanantwerp

To Whom it May Concern:

Fracking is a highly toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. You should also be aware that the gas corporations are making every effort to subvert democracy and the regulatory process. Sometimes they work the system so well that they can frack on land owned by someone who does not want fracking. They frequently bribe elected and appointed officials with campaign contributions and financial rewards. They try to gag doctors about the health effects of fracking.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tony Cozzone

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. IT IS CRITICAL THAT YOU ACT IMMEDIATELY ON THIS ISSUE. THE ARGUMENT MADE BY THE OIL AND GAS INDUSTRY FOR PURSUING FRACKING IN THE FIRST PLACE WAS THAT WE WOULD BE ENERGY INDEPENDENT. THIS LOGIC HAS BEEN EMPLOYED ENDLESSLY TO JUSTIFY DRILLING, BUILDING OF PIPELINES, ETC. IN REALITY THE MISSION IS PROFIT, AND AS USUAL CORPORATE PROFIT DOES NOT CONSIDER THE HEALTH OR WELLBEING OF US CITIZENS OR THE ENVIRONMENT. IT ALSO DOES NOT MEAN REVENUE FOR THE US GOVERNMENT. WE DO NOT WANT TO BUILD A FRACKING EMPIRE ON THE BACKS OF OUR CITIZENS. WE DO NOT WANT TO ALLOW A PIPELINE THAT WILL SEND DIRTY FUEL FROM CANADA TO TEXAS TO BE EXPORTED FOR CORPORATE GAIN. WE DO NOT WANT TO SET OURSELVES ON A PATH OF ENVIRONMENTAL DESTRUCTION TO FEED THE AMBITIONS OF INSIDIOUS CORPORATE GREED. PLEASE DO NOT ALLOW FRACKED GAS TO BE EXPORTED. PLEASE DO NOT APPROVE THE PIPELINE. PLEASE DO NOT SUPPORT FRACKING. PERIOD. WE HAVE SAFE, CLEAN, ABUNDANT ALTERNATIVES IN SOLAR, WIND, GEOTHERMAL, ETC. INNOVATIONS EVERY DAY AND IF THE GOVERNMENT REALLY SUPPORTED ALTERNATIVE ENERGY INITIATIVES WE COULD BE MAKING A MAJOR IMPACT ON GLOBAL WARMING. WE ARE WITH YOU PRESIDENT OBAMA, I HOPE YOU ARE WITH US. THANK YOU.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Harrington

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeff Miller

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear Reader, Fracking is an unamerican activity as it undermines both of our greatest assets, the health of our land and our people. Please do not allow corporate greed to destroy our precious resources! I completely disagree that fracking helps us become independent of other nations as would renewable energy but to now rape our land to sell it so a few make money while many people will have short and long term health effects is unethical. Do the right thing and outlaw this terrible form of gas extraction. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. These same companies have repeatedly shown us their disregard for our land and our people, why on earth would we trust them?

Sincerely,

Joan Beard

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

George Boggs

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Earl Staelin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. You know that. Allowing fracked gas exports will dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Without any hope at all that you will for once do the right thing, I nonetheless ask you to stand up to the fossil fuel industry and deny all applications to export natural gas. "Do whatever the fossil fuel companies tell you" is NOT a viable energy policy OR a viable environmental policy. So why is it the only one you ever consider?

Sincerely,

Susan Hathaway

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Fred fall
106 Uxbridge
Cherry Hill, NJ 08034

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Larsen

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kaylee powell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Josepha Maly

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daniel Blacker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Thiel
336 Shetland Dr.
Grants Pass, OR 97526
