Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Teckman

RE: 2012 LNG Export Study

To Whom it May Concern:

Is this really what I'm hearing? to decrease our dependence on foreign energy, the government is allowing fracking to bring us natural gas. But we'll spend money to build processing plants, money to transport it to seaports, Fracking is a toxic threat to American communities and the climate. and then sell it other countries, leaving less for our own needs. There is no logic here!! Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dorinda Sheveck
37 Weston Avenue
Fishkill, NY 12524

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christine Hicks
2224 18th St

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking technology has already been exported by the USA to countries that are promised financial gain when mostly what they get is polluted water (in places that already have clean water shortages). Exporting gas resulting from fracking is nothing short of irresponsible. Please do not allow the gas companies to fool you into thinking this is a good idea. I recently moved from the area affected by Hurricane Sandy where many friends and relatives felt the effects of climate change. The fracking process will only make these storms more frequent and devastating. We must put our inventiveness and money into sustainable energy sources. This has been a campaign promise you used in your 2008 campaign. Now is the time to fulfill that promise. Thank you for your consideration of this important matter.

Sincerely,

Carolyn Carroll

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Glenn Gevedon
2173 Centerville Road
West Liberty, KY 41472

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gretchen Schubeck

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. The consequences of this form of gas extraction are just now being recognized around the country. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I want you to stand up to the fossil fuel industry and deny all applications to export natural gas. We as a nation cannot afford the high cost economically or environmentally of extracting natural gas through fracking.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas is an EVEN WORSE idea than fracking. With the constantly mounting evidence that fracking kills humans, crops, and land, we need to stop fracking altogether, not expand it. Please don't do this; you are risking your own peace of mind for the rest of your life.

Sincerely,

Debbie Notkin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Randy Pitch

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Timothy Gilmore
930 Post St., #14
San Francisco, CA 94109

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The harm caused will be irreparable, our water supply which is already dwindling will be unpotable from chemicals used in fracking. This is your moment to make a difference in how the world powers itself, in a clean sustainable way. It will not be easy. The economies of the world will struggle but waiting is to doom our children and grandchildren to a world of chaos and world war over the meager supply of food and water still available in the arable lands that still exist.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ernesto Lopez

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking poisons the air, water and soil of neighboring communities and promotes global warming. We have the technology to get energy from sustainable non-polluting sources and should be focusing on development of these, not developing ways to export the results of trashing our one and only country. Please deny the 16 permits to export fracked gas in the interest of American communities and in our planet's ability to continue to support human life.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rick Kardash

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Thank you.

Sincerely,

Mary Keenan
894 Neff Road
Grosse Pointe, MI 48230

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Despite heavy-handed efforts from the gas industry to cover it up and silence critics, fracking has already proven is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gene Ayres

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Arthur Mathews

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Elisabth Hurd

RE: 2012 LNG Export Study

To Whom it May Concern:

The justification for endangering our environment with fracking is that it creates local jobs and reduces America's dependence on foreign fuels. But permitting the natural gas obtained to be exported (to countries which ban fracking within their own borders) makes this a fabrication. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have safer and cleaner options to secure our Nation's energy future: wind, solar... and other green technologies.

Sincerely,

Christy Allen

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We can use natural gas as a bridge to energy independence while we build up our renewable energies to provide more of our needs. Our renewables need to be in place so the US is energy self-sufficient. Once energy independence is accomplished, if we have extra natural gas to sell, that is the time to consider exporting. Don't export it now. No one will benefit but the oil/gas companies as the cost of natural gas will rise for EVERYONE, in and out of this country. Americans should not be the ones paying for big oil/gas profits. Put renewable energy in place before exporting natural gas. THAT will ensure TRUE energy independence. Look at what Germany is doing. They are WAY ahead of the US in implementing renewable energies in their country.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jerahmeel Males

RE: 2012 LNG Export Study

To Whom it May Concern:

Here's my perspective, given that fracking is a toxic threat to American communities and the climate. So when will our policy makers comes around, instead of being hand-maidens of the energy industry? When? When fire comes from their tap water. That's when. But by then, when the policy maker(s) in question decide to strike-out on their own as opponents to fracking, here's how it will go: They'll be labeled as disgruntled ex-employees and voila – credibility immediately called into question and the usefulness of their anti-fracking stance becomes almost meaningless. So, you've got an opportunity to get ahead of the curve before fire comes from your tap; fresh water supplies become too toxic to try to purify; when the cost to taxpayers increases and those doing harm skate and before your credibility is called into question. (Use the term "GMO" when dealing with Big Agra and the same can be said about when will we stop allowing GMOs in our food supply.) Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. NO fracking – unless it is on your own private property and it is proven NOT to wander and harm neighboring water tables.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Claus
651 Foxcroft Circle Se
Marietta, GA 30067

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. America gains no energy independence by selling American gas overseas; just more bloated profits for American Oil companies and irretrievable loss of American assets !

Sincerely,

Charles Ross

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Chu

RE: 2012 LNG Export Study

To Whom it May Concern:

As a student living in New York State, I am concerned about the health, economic, and environmental effects of hydraulic fracturing. Fracking can contaminate water through spills and leaks of producing fluid or brine, or by allowing methane and flowback to migrate through the fractured shale, potentially reaching aquifers. It can also fragment forests with miles of pipeline, and damage infrastructure and communities with heavy truck traffic and coercive "compulsory integration", as well as tourism deterrence. Most importantly, however, I am concerned about the effects of fracking on climate. Even the safest fracking operation releases otherwise inaccessible fossil fuels for combustion, perpetuating our dependence on fossil fuels and increasing the level of dangerous, economically damaging warming to which we have committed ourselves and our planet. The last thing America needs is heightened investment in fossil fuels and the associated infrastructure. Reject applications to export fracked natural gas.

Sincerely,

Devin McMahan

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Not only would this increase the pollution of groundwater around the world but also continue to decrease the availability of water in general around the world for public use and agriculture. There are already questions concerning if cities have leased too much water to oil and gas companies and therefore may not have enough to properly account for droughts. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

America's non-renewable strategic fossil fuel natural resources should not be allowed to be exported. This is a matter of national security. Natural gas must be maintained for domestic use. When world-wide fossil fuels become increasingly scarce, having an available domestic supply will be absolutely essential. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

This is the time to be courageous and to have sound judgment. I have studied this matter of fracking a good amount, because Colorado, where I am from is suffering from fracking, and New York where I live now is hanging by a thread. All environmental decisions have consequences of huge magnitude. The pollution of our water systems would be one of the gravest harms yet to be inflicted. Fracking is a threat to American communities, our water and the climate. Allowing fracked gas exports would dramatically increase the demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up against this. Deny all applications to export natural gas. We should make sure we have alternate sources and do not use fracked gas AND likewise for all humanity.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Peter And Ellen Bush
208 Central Street

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I don't understand how this is even being considered. With all the research about the effects of fossil, non-renewable fuel on the climate, there should be tons more solar and wind projects being funded. Why would we be exporting natural gas if we want to be energy independent? It must still all about corporations and THEIR profits. Free enterprise yes, but not at the expense of our resources, of our environment, and of our population's health.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is a new idea... hardly tested... and it's not like going straight down to a pool of oil. It requires so many holes to get at the cracks where the gas is located. It's a nightmare waiting to happen. Water is so precious for drinking.... and fracked gas is a new technology that requires 100,000+ tons of water to get at this gas. I think it makes more sense to clean up the coal technology ... and get private investors interested in Solar & Wind like what is happening in Germany.

RE: 2012 LNG Export Study

To Whom it May Concern:

From all I've seen and read, fracking needs far better regulation than it's been subject to so far. It threatens drinking water supplies, while using vast quantities of water laced with a mix of chemicals that, last I heard, was a secret that companies would not divulge. Its production releases greenhouse gases that contribute to climate change. I gather it is cleaner to burn than coal, and now produces a growing percentage of US electricity, but if the export of fracked gas is permitted, the fossil fuel industry will want to produce more and more of it, a danger to our country and to the world. The chance to make money with exports may also create an incentive to continue the use of some of the coal-powered plants in this country that would otherwise be shut down. I urge you to deny all applications for the export of natural gas and to ensure that fracking is subject to wise regulation that protects both nearby communities and the larger environment.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Clarke

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rich Terrone

RE: 2012 LNG Export Study

To Whom it May Concern:

We already have water shortages. We cannot afford to pollute or waste millions of gallons of water to perform hydrofracking. Water is far more important than gas or money. In addition, people's health has been ruined by hydrofracking. We cannot do this to anyone. Hydrofracking cannot be done safely. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

We the people should decide what we don't want, especially when it to help corporations increase their profits at the expense of people. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Matt Cormons

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rene Paine
1937 Utah Ave. Ne
Solon, IA 52333

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Laurence Coronis
22 Bennington Battle Trail
Wilton, NH 03086

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Raj Natarajan

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Chappell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

J Thomas

RE: 2012 LNG Export Study

To Whom it May Concern:

I recently learned that Saudi Arabia is committed to getting all of its domestic energy from renewable resources – wind, solar, and whatever else doesn't pollute and otherwise damage the earth. They believe that the lake of oil they are sitting on should be used only for things which cannot be achieved in any other way. I find that incredibly wise, and I find it incredibly frustrating that U.S. energy interests are so dumb. Among all the possible methods for extracting fossil fuels from the earth, fracking is one of the worst, since it wastes water – the only resource no living thing can do without – and pours resources (infrastructure, human labor, etc) into a fuel which increases the damage to the earth and the sky. It is a toxic threat to American communities and the climate. If our country encouraged fracked gas exports, it would only increase the scale of and demand for fracking in the United States. Let's be smart – like the Saudis. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Leslie Kaye

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Raping the earth by fracking contributes to climate change, which in turn, as Governor Cuomo stated, contributes to increase in natural disasters such as Superstorm Sandy.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is amazing to me that with all the evidence of the danger fracking even happens at all. It is completely horrific that you will allow fracking companies to destroy so much of our country and the lives of those affected to make huge profits by selling the gas to other countries. Actions like this make me feel ashamed to be an American and to admit that I voted for the present administration.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Alan Lindenfeld

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Redlion York

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tracie Cearley-Kinser
538 Superior Ave

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tony Keller

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maggie Williams
464 Main St
Saugerties, NY 12477

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dean Johnson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Terry Travis

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking has already poisoned ground and surface water in a number of American communities, as well as exacerbated our climate changes. Why are we ignoring this? Why are we even considering selling out our future to the rapacious, craven oil & gas industry? What will our country be if we [continue to] allow them free rein? Please, stand up to the fossil fuel industry: deny all applications to export natural gas.

Sincerely,

Barbara Ash

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Aufochs
205 Park Place
Brooklyn, NY 11238

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Angelica Mendez

RE: 2012 LNG Export Study

To Whom it May Concern:

There are enough signs and evidence now that fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Adams

RE: 2012 LNG Export Study

To Whom it May Concern:

As a physician training at University of Maryland Medical Center, I have studied the public health impact of hydraulic fracturing extensively. The current research shows adequate evidence that this technique will have grave health consequences and may endanger water resources. There should be a moratorium on any gas drilling in the US until the process can be properly regulated under SDWA and Clean Air Act. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I call on you to heed the warnings of public health experts, physicians, and citizens alike. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ron Torretta
200 Centner Court

RE: 2012 LNG Export Study

To Whom it May Concern:

I vacationed in Nova Scotia and there are billboards and yard signs everywhere you look speaking out AGAINST fracking. Why do we want to destroy our water and our land? Others have already shown that we do not know enough about long term effects. Once permission is granted there will be no going back. So, make sure this is a good idea before moving forward so aggressively. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Sturek

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Daniel Mottert

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking is THE worst thing we have done to our environment. Do not allow a small minority of people to exploit and destroy America's land, air and water just so they can make a profit. They intend to make a terrible mess and then, just walk away with their profits, leaving destruction in their wake. It is unconscionable on so many levels! Please clamp down on fracking and also reject Keystone XL. Instead, encourage solar and wind energy development. The "energy independence" argument WILL NOT WASH if we are paying for it with the environmental security of future generations.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

The only reasonable excuse to "frack" would be if we desperately needed more gas in the USA. The fact that the producers want to export gives the lie to that! If WE don't have a pressing need for the gas NOW, it's not going to disappear if we leave it in the ground until we have safe and "green" methods to extract it! NO "fracking" 'til it can be done without ruining the environment! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

The only possible argument FOR fracking is this: although the risks to the environment are significant, the possibility of US energy independence balances that risk. To be independent of unstable and corrupt regimes, be they in the Middle East or Central Asia, would be invaluable. But if energy independence is the goal, then there is no reason to allow fracking—and it's considerable harm to the environment—as a way for oil companies to increase profits by exporting cracked gas. Please do NOT allow the exportation of cracked gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Our goal is to reduce overall greenhouse gas emissions. Fracking releases methane, much worse than CO2 for global warming. The industry must be forced to reduce these emissions, as a condition of seeking more unconventional gas. Replacing coal for generating electricity is a good thing, but the net effect on the environment must be positive.

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wilkerson Gillian

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Walt Dembos
8403 Concord
Bull Valley, IL 60098

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Priscilla Liebowitz

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne Covello

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in an area - Fingerlakes of NY - where we have water that is clean and abundant, one of the last places on earth with such water resources. Water is more important than natural gas and what it can provide, as nice as it is to keep warm in the winter up here! We keep hearing from the industry (people who don't live here, by the way) how fracking will make us energy independent, but it is clear that the gas will go to the highest bidder (nothing patriotic about this industry). The fact that these ports are slated for construction is just more evidence of that being true. Shut 'em down. Do not approve. Don't be remembered in history as the people who ruined our water aquifers and otherwise destroyed a beautiful place to live and work in upstate NY. Take a look at the other places fracking has occurred, get on the ground and talk to people and see how the landscape, air quality, roads, water, noise levels, have changed - not just read law documents. And please start talking seriously to the nation about conservation again, so we use less energy. People really are clueless about this subject, getting new mobile phones every six months, whatever - such levels of consumption cost us dearly environmentally. Respectfully, Karl

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Darren Strain

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We the people own the actual gas. It is leased to the companies. We do not want to destroy our health and our land for the companies to pollute more so they can profit from exports. We gave a lot of money to your campaign and went door to door for you. Now stand up to the environment!

Sincerely,

Ann Vernon

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jane Callaway

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Isn't bad enough that we've opened ourselves to the exposure of fracking in order to become energy independent? Shouldn't it be required that it is kept in the USA in order to do that?

Sincerely,

Diane Bozzelli

RE: 2012 LNG Export Study

To Whom it May Concern:

I am one of the original, modern environmental-energy activists since around the first "EARTH DAY" (April 22, 1970) going on 43 years strong now: "'Fracking' (hydraulic fracturing/horizontal drilling)" is a REAL "TOXIC THREAT" to American communities (including those in southern Illinois) and the Earth's climate system. Allowing "'fracked' natural gas" exports would dramatically increase the scale of and demand for 'fracking' in the United States by giving the large fossil fuel industry access to huge foreign markets. Please STAND UP to the politically powerful fossil fuel industry, and DENY all applications to export natural gas! This is being sent on the same day as the "Presidential Inauguration" of Barack Obama. This is the time for the Obama-Biden Administration to REJECT ALL NATURAL GAS 'FRACKING,' and continue to aggressively pursue local community energy projects favoring "adaptive community energy resilience." Besides energy efficiency programs, these include distributed renewable energy technologies—Capturing methane biogas produced in landfills, methane digesters which convert farm animal manure into methane biogas (then used for electricity generation), wastewater treatment facility-based anaerobic digestion systems producing methane biogas (combined with co-generation capacity), ethanol plants using regional cellulosic biomass feedstocks, local enzymatic biodiesel plants, solar hot water heating, passive solar space heating and cooling, solar agricultural process heat for drying grain, local wind turbine and solar photovoltaic (PV) projects, biomass-fueled electricity generation using wood pellets or wood chips, smaller-scale geothermal heating and cooling systems for buildings, smaller-scale hydropower, and so forth.

Sincerely,

Dennis R. Nelson, Proressive Social Activist

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Darla Arians

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Having a good environmental policy record is a must, as you, Mr. Obama, will set the precedent for the rest of the world. The first step to doing this is to no export fracked gas; to put an end to fracking altogether.

Sincerely,

Steven Harter

RE: 2012 LNG Export Study

To Whom it May Concern:

Wow, seriously? I listened to the inauguration. It was inspiring, and Climate Change was a word that President Obama used. Fracking vents many CO2 gasses. We need to invest in our alternative energy future. Natural gas should not be a large part of it. Especially if it's derived from fracking. Fracking pollutes air, thousands of gallons of clean water, and our soil. Please STOP the pending permits to ship natural gas. Thank you, Debra Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

I am not a typical anti-fracking person. I believe it can be done safely if regulators and industry can find a way to work together and if some good research is done. But I find the idea that our natural gas will be exported to be insulting. Whatever time fracked gas will buy us will be greatly diminished if multi-national firms with no interest in Americans or America can ship it to wherever they want. I support a military that fights oil wars with my taxes. I support drone strikes that are alienating millions world wide because those strikes are carried out in my name. I resent picking up the tab for multi-nationals while being denied the full benefits of resources under my feet. The major issue today is whether the US government works for Americans or just rich Americans and their multi-national firms. It's our gas, it's our future.

RE: 2012 LNG Export Study

To Whom it May Concern:

Reject all applications to export fracked gas. It is too toxic a threat to American communities and the climate to be allowed. Fracked gas requires a carbon-intensive process which produces 20%-30% more CO₂ than burning gas. In addition, allowing exports would increase use of coal-fired plants just when they are beginning to be phased out, increasing US carbon emissions overall. Do not allow this proposal to go ahead.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ina Ayliffe
12 Lark St.
Greenville,, SC 29607

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Future generations will blame such decisions as this for destroying their future and their world. Instead we need a complete focus on generating all the energy we need from renewable sources, solar, wind, wave motion, tidal, etc. NOW, not 50 years from now. Plan immediately to eliminate ALL fossil fuels by 2030.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is not only toxic to American communities but equally to the environment housing all humankind. Fracking is viciously evil and greed driven. Finally, it is quintessentially reckless and destructive to the entire global environment, our only home in the universe. There are no words sufficiently strong to describe its loathsome stupidity. Please strike a strong and effective stance devoted to its obliteration.

RE: 2012 LNG Export Study

To Whom it May Concern:

Let's put money into developing renewable energy sources instead! Natural gas produces carbon that is contributing to climate change that is wrecking havoc on our environment!! Let's give our children a world that they can inhabit!!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Thank you.

Sincerely,

Kathy Levine

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lawrence McFarling
16045 Sw Audubon St., Unit 103
Beaverton, OR 97006

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Rebecca Brown

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy campeau
4460 Ellenwood Drive

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This is a seminal moment! We cannot fall to the lower urges of the economic excesses of the gas, oil, coal industries nor for economic gains that will lead communities to damage their own food and water supplies. Our planet is our collective nest – and one does not foul one's own nest! Please think protectively and keep us on an ecologically safe route for a longer future. And please do not disappoint us with any help toward these unsafe fracking practices. We must come up with other alternatives that are safer for all. We count on your good conscience to do the right thing for our planet and your daughters' future.

RE: 2012 LNG Export Study

To Whom it May Concern:

We need energy security here at home, and while I hate the methods and repercussions of obtaining our gas from deep in the earth, I realize that we do need it, but we should keep it here!!! If we start to export it, we'll end up back in a situation of trying to import other, and more toxic, fuels from other nations once again. Please regulate the drilling of natural gas and oil to ensure they aren't a threat to our communities and our health, and then do all you can to keep that energy here in North America! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dave Beccue
918 Cunningham St

RE: 2012 LNG Export Study

To Whom it May Concern:

What's worse for the climate than fracking? More fracking. And that's exactly what we'll get if you sign off on permits for 16 fossil fuel megaprojects that are currently in process. Approving these projects would create a huge new incentive for the fracking industry to accelerate drilling in the U.S. The Department of Energy's report on the subject downplays the devastating impact that fracking, burning, and exporting gas has on local communities, our economy, and on our planet's climate. Fracked gas is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. See Jeff Tollefson, "Methane leaks erode green credentials of natural gas," *Nature*, January 2, 2013. Exporting fracked gas which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it produces 20%-30% more CO₂ than burning gas in the U.S., according to Joe Romm, "Exporting Liquefied Natural Gas (LNG) Is Still Bad For The Climate And A Very Poor Long-Term Investment," *ThinkProgress*, August 16, 2012. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants which are beginning to be phased out, largely due to the low price of natural gas and increasing U.S. carbon emissions overall. See Craig Segall, "Look Before the LNG Leap," *Sierra Club*, November 2012. We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. Bottom line: No matter how you do the math, a world that runs on natural gas is a world wracked by climate chaos and extreme weather deadly superstorms, wildfires, droughts, and floods. See Joe Romm, "IEA's 'Golden Age of Gas Scenario' Leads to More Than 6F Warming and Out-of-Control Climate Change," *ThinkProgress*, June 7, 2011. Green-lighting fracked gas export terminals would have a disproportionate impact on communities near fracking operations. People living near fracking operations cope with terrifying local impacts: contaminated even flammable drinking water, cancer-causing air pollution, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions, as documented in "Hydraulic Fracturing 101," *Earthworks*. Some residents have even found fracking chemicals and heavy metals in their blood: see Eliza Griswold, "The Fracturing of Pennsylvania," *New York Times Magazine*, November 17, 2011. In short, the human toll taken by fracking is already far too high. Giving the fracking industry an incentive to expand its operations by allowing it to easily export fracked gas overseas would be nothing short of irresponsible. For the United States, 2012 was the hottest year in recorded history. A slew of climate change-driven disasters including deadly Superstorm Sandy underscored the dangers associated with unchecked climate change. It's time to answer the call of history and stand up to the fossil fuel industry starting with blocking fracked gas exports. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I urge you to stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margaret snow

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anna Luhman

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Frank Trnka
2520 28th Avenue South
Minneapolis, MN 55406

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. HOW CAN THIS ADMINISTRATION COUNTENANCE FRACKING, BASED ON THE GOALS PRES. OBAMA JUST STATED IN HIS ADDRESS TO THE NATION YESTERDAY!?! FRACKING CAN PRECIPITATE EARTHQUAKES AND OTHER GEOLOGIC PHENOMENA, MAKE UNUSABLE UNDERGROUND AND ABOVE-GROUND WATER SUPPLIES, DESTROY THE SOIL STRUCTURE OF LARGE AREAS, POLLUTE THE ENVIRONMENT, RUIN THE VEGETATION OF A REGION AND THE HABITAT FOR WILDLIFE AND PEOPLE, AND DO MANY OTHER DAMAGING AND DESTRUCTIVE THINGS!—JUST SO THAT A FEW MILLIONAIRES CAN MAKE MONEY THAT THEY DON'T NEED! THIS CATASTROPHIC PRACTICE SHOULD BE BANNED AND OUTLAWED BY THIS ADMINISTRATION, IN MY VIEW! PLEASE CONSIDER IT! THANK YOU!

Sincerely,

Carroll English

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is bad enough and should be phased out. However, for Big Oil to sell fracking as a solution to our oil shortage and as a job creator, and then plan to export that fracked gas to other countries illustrates the big lie behind this propaganda campaign. The big plan is for this cheap energy to fuel industry in low wage countries – further accelerating the loss of jobs at home – globalism at its worst. In my opinion, fracking should be phased out entirely. Like all oil and gas mining, fracking destroys the environment, adds to climate change by maintaining our addiction to fossil fuels, and steals from future generations a limited resource that took millions of years to create.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dassy Shellenberger

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We've witnessed aquifers and communities destroyed by fracking. Fracking is not a solution to Global Warming! We need widespread carbon-free alternatives to protect our planet. Please oppose increased fracking and let's work together to preserve a healthy planet.

RE: 2012 LNG Export Study

To Whom it May Concern:

This is the promise of moving away from fossil fuels? The people of this nation get to pay (money, their health, & that of their children just so we can export natural gas? I realize Mr. President that this is being sold as a jobs creator but that's like the selling the casinos in the 80s as job creators. In K.C., Mo. after the casinos were up & running for a year or so a study was done on the job creation claim. The study found that more jobs were lost, overall than were created. This is the same thing to say nothing about sacrificing our environment & all the jobs connected to it. Mr. President it's time to fulfill your pledge to move this country away from fossil fuels; say no to these permits for the sake of the public & the future of your children! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cynthia Simurro
4 Conway Rd.
Shelburne Falls, MA 01370

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Natural gas is a fossil fuel, it is not unlimited. We will run out of it at some time. So if we want to be energy independent, why would we export it? The long term effects of fracking are not known, partly due to the industry's refusal to tell us what they use in the process. They say, "Trust us". I say, Trust but verify, and one can not verify the unknown. We need to slow down, get all the facts, see how much gas is leaking, since methane is a powerful greenhouse gas, and then decide how far to go. The price of gas is down because of a glut on the market, let's use this time to do quality science on the industry.

Sincerely,

Don Ries

RE: 2012 LNG Export Study

To Whom it May Concern:

Allowing the exportation of natural gas is NOT the way to address "climate change". It is a total capitulation to the lies and greed of large energy companies AND it makes a lie of the comments you just made in your Inaugural speech. Please consider developing legislation designed to get the fossil fuel companies to invest their billions, including the billions in subsidies we provide them, in sustainable energy. Make it the only avenue for them to keep the subsidies.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gerald Love

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Logan De Ley
538 Santa Clara Ave.
Alameda, CA 94501

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The fossil fuel industries are desperately seeking new markets overseas (Pacific northwest coal export terminals; XL pipeline all across the U.S. to export oil from Canadian tar sands; and now natural gas export terminals) to make up for lagging U.S. demand. We need to plow full steam ahead with renewable green energy technologies and start backing away from fossil fuels ... or else our children will have to live on boats.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marty Schaefer
