

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Harold Broadstock
2019 Sierra Nevada Dr.
Atwater, CA 95301

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Andreia Shotwell
3575 Pierce St.
Wheat Ridge, CO 80033

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I live in South Florida and when driving the Turnpike I cannot see one roof covered with solar panels. Does someone have an explanation for that? Perhaps it is prohibited in sunny Florida to install those?

Sincerely,

Andreas Ohland

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Chase

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brigitte Desouches
800 Brommer Street
Santa Cruz, CA 95062

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

It hardly seems reasonable to be selling water for fracking in Colorado and elsewhere when the country is facing drought conditions and communities have difficulty supplying all the water citizens need or want for other applications. It also uses water that could be used for irrigation. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara Rupers

RE: 2012 LNG Export Study

To Whom it May Concern:

Why are we even still discussing this hideously wasteful, destructive practice of "gathering energy?" It takes more energy to get this small amount of non-renewable gas, which is of very poor quality, than is actually gathered. It's just plain stupid. Stop all fracking now. The planet can't take our crap any more! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Wow! The anti-environmental stance by the Obama Administration never ceases to amaze. It's like they're determined to speed up global warming instead of curbing it. If you think fracking is benign, then I'm sure you wouldn't mind living next door to a fracking site and wouldn't care if your water supply was destroyed by fracking chemicals or your air unfit to breath. And here we all thought that Obama was an environmentalist - boy, were we fooled. Fracking is a very destructive form of getting natural gas, so to want to ship it around the worlds, will only mean that our country's environment will be destroyed so a few gas/oil companies can get even richer. Absolutely despicable. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. All the arguments for fracking are economy-based. But they're specious, because the only economic improvement would be in the oil companies' profit lines. The rest of us would pay through every pore in our bodies for a long long time. Don't mortgage our future. Fracking WILL have dire unintended consequences, and if we trust the oil companies to take adequate safety precautions, we are nuts. They cannot be trusted, as they have shown us hundreds of times, from the Niger delta to the Gulf to Valdez.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christopher McNulty

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Drew Cucuzza

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Paula Krejcik
56 Hope Lane
Sonora, CA 95370

RE: 2012 LNG Export Study

To Whom it May Concern:

What good is economic recovery if we ruin our basics like water, "the water of life"? Where are our alternative energy = our massive conservations innovations in manufacturing, energy, etc, Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Dorsey

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ed Hawkins

RE: 2012 LNG Export Study

To Whom it May Concern:

I am a lifetime Utahn and a natural gas customer. I am mortified that I may unwillingly be part of the drive to exploit reserves that must be left undisturbed. Fracking is too much of a risk to our precious aquifers and fragile desert environment. I don't want it here and I don't want it in other people's backyards either.

Sincerely,

Pam Harrison

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gabriella Turek
112 N. Michigan Ave #12
Pasadena, CA 91106

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There are alternative fuel innovations and alternatives. We must change the way we live on this earth and protect ourselves from the defiling of our nest. The time to embrace change is NOW!

Sincerely,

Gail Barton

RE: 2012 LNG Export Study

To Whom it May Concern:

We need to keep our eye on climate change and allowing exports will increase fracking which we know will increase methane pollution and increase earth's warming. This is insane. This administration needs to keep a focus on renewable energy and a transition to a cleaner environment allowing this fuel mega projects not in America's interest but only serve corporate interests. Let's get real and do what good for everyone not just a few. Really, it's hard to believe this is even being considered. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We don't need it! Again, It's about the money for someone but we have to pay for it, one way or another. We don't want it and We don't need it.....instead; ENFORCE; Who pays for it and who gets paid to get it????

Sincerely,

James & Barbara Thomas

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting fracked gas sounds like the WORST idea. Your job is to help us REDUCE carbon emissions, not risk giant increases with a plan designed to enrich oil executives. It seems crazy to export fossil fuels at this time, when we are importing from other countries. Please keep in mind that it is our children's lives that are at risk... and history will tell them who and how we failed to save our earth for future generations.

Pittsburgh, PA 15217

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Hydrocarbons will always be an important part of our economy- as fuels and as feedstocks for other important products. For some purposes there is currently no substitute that can provide comparable energy density, ease of handling, availability and portability. For military vehicles for example, rechargeable batteries in many cases are not currently a satisfactory option. As such, hydrocarbons are strategically significant. Like other fossil fuels, our natural gas reserves are a finite resource. The faster we go through them, the faster we'll exhaust them. we may create a mini-boom and sell vast quantities of them cheaply now- but we'll have to buy them back at a much higher price at some point in the future, and they won't be from domestic, accessible, controllable sources. I hope you will see the wisdom in denying all applications to export natural gas.

Sincerely,

Hugh Smyser

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jayleen Hatmaker

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Exporting fracked gas would be a failed economic strategy and drive up the price of natural gas in this country. As soon as fracking comes to fruition in foreign countries, the export facilities will be uneconomical and we will have wasted all that money on what will be unused infrastructure. In addition we will have sped up fracking in the country using up our supplies and not having the time to evaluate potential environmental damage.

RE: 2012 LNG Export Study

To Whom it May Concern:

We live in rural Arkansas where fracking is an awful reality. We live in fear that gas companies, completely against our wishes will come into our immediate area OR ON OUR OWN LAND and put the land that we love at terrible risk of toxic pollution. The water has become toxic, even burnable, in many areas where fracking is taking place. Renewable energy is the only energy option that makes sense for America's future. The idea of not only fracking for natural gas but EXPORTING it out of the country for profit for some possibly foreign corporation is not in the best interests of the people or wildlife in the U.S. Why would we decimate our own lands in order to make a temporary dollar? Fossil fuels need to stay in the earth and we need to develop renewable energy in a non-toxic way. We also need to start using much less energy. The future is upon us with rapidly increasing temperatures, droughts, wildfires, hurricanes all due to global warming. Stop all fracking in the U.S. and move toward a truly secure future. Exporting fracked gas (or oil) is the most unAmerican thing I can think of. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Enough already. If you want the public's trust you must work according to what will ensure our long term health. Financially the clean up that will inevitably have to be done is far more expensive than the gains from the short term energy source. So - the question is who is to gain and who is to pay? We know that answer. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Janet Kellogg

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Judith Mathis-Moody
98 Pine Tree Rd
Monticello, GA 31064

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. People living near fracking operations cope with terrifying local impacts: contaminated even flammable drinking water, cancer-causing air pollution and smog, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions.⁶ Some residents have even found fracking chemicals and heavy metals in their blood. That is a lot of human suffering to make a buck. Please re-think this strategy and look at the long term effects of the process. GO GREEN!

Sincerely,

Kate Raudenbush

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Keith Havens
605 Butler Ave
Point Pleasant Boro, NJ 08742

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Olga Sevilla

RE: 2012 LNG Export Study

To Whom it May Concern:

Politicians and the public have called for U.S. energy self-sufficiency; exporting natural gas is antithetical to that goal. It puts short-term profits for the gas extraction industry ahead of self-sufficiency. It is a waste of a natural resource that belongs first to the American people and their future needs. Fracking, as it is now done, also is a threat to American communities, the environment, and the climate. Allowing fracked gas exports would dramatically increase those impacts. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Methane, which is the main ingredient of natural gas escapes in the process of extraction and add very powerfully to the global warming. 80% of all known fossil fuel reserves need to stay in the ground in order to avoid losing the battle with climate change. We need to invest in energy conservation and energy sources that are truly not harming the environment and not endangering the future of our children. In addition local wells and groundwater pollution with fracking chemicals is too easy for the fracking companies to get away with. Legislation is way too weak in most states to enforce better/decent practices.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Joyce MacNeil
3226 Nash Rd
Hamburg, NY 14075

RE: 2012 LNG Export Study

To Whom it May Concern:

Stop selling out America's groundwater to the oil and gas companies immediately!! Common sense tells us that firing millions of gallons of toxic chemical-laden water underground will foul and toxify our water supply. And now you want to let them poison us and make a profit on our resources by exporting it? TREASON!!! Cheney made this bargain and YOU MUST UNDO IT!!! Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

While hydraulic fracturing may well provide access to domestic energy reserves, the pell-mell approach to this potentially devastating extraction method, along with pending plans to export natural gas derived from fracking activities, is not responsible energy policy. I urge that you table any export projects related to domestic natural gas extraction, and instead focus on providing effective oversight and development of safe extraction methods to provide access to domestic use of our shared natural gas reserves.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael McIrvin

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary paterson
750 Weaver Dairy #156

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Recent research suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Joy Leaper
192 Perry Ave.
Norwalk, CT 06850

RE: 2012 LNG Export Study

To Whom it May Concern:

Do not be fooled by the fantasy that fracking technology can "SAFELY" access enormous untapped natural gas sources! Fracking is a toxic threat to American communities and the climate. Beyond the dangers of fracking for domestic consumption, to allow fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Wendy Zukas

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nancy Dorian

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. This planet (our one and only) cannot withstand the assault of all the "new" petroleum products that will be spewing pollution into our air and water. I know that this is not a secret to you or Congress or even the oil and gas oligarchs. Why are you letting it happen when you know better? You have children. What kind of a world will they live in?

Sincerely,

Patricia Victour

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Nierenberg
365 Edgewood Ave.
Teaneck, NJ 07666

Stand up to the fossil fuel industry and deny all applications to export natural gas. IT IS BAD ENOUGH THAT THIS ADMINISTRATION IS CONSIDERING FRACKING AS A VIABLE WAY TO GET OIL, BUT TO DESTROY OUR COUNTRY TO GET THE STUFF AND THEN EXPORT IT IS OUT OF THE QUESTION!!!! I'M STILL WAITING FOR THE OBAMA ADMINISTRATION TO TELL PEOPLE TO DRIVE LESS JUST ONE DAY A WEEK, SIMPLE STUFF LIKE THAT. INSTEAD YOU ARE ALLOWING SHELL INTO THE ARCTIC KNOWING THERE WILL BE A CATASTROPHY AND YOU WANT TO ALLOW FRACKING AND EXPORT THE PRODUCT. UNBELIEVABLE.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ross Larson
172 Rainbow Lane
Trinidad, CA 95570

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sara Gamble

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I trust the Petroleum/Natural Gas industries about as much as I trust the Healthcare Insurance industry. Just say no. We need to find the truth before we proceed.

Sincerely,

Steven Hill
6646 Wedgewood Drive
North Olmsted, OH 44070

RE: 2012 LNG Export Study

To Whom it May Concern:

If one person, one child suffers and/or dies as a result of contaminated well water, then this technology should return to the drawing board. The 'Halliburton exclusion prevents anyone knowing what is in the 'fracking chemicals', but one thing is certain, they are poisonous, and cause groundwater contamination, rendering properties unsalable and necessitating appeals to the EPA to truck in fresh drinking water for the people affected. Is it worth subjecting any of our citizens to complete loss of property value, sickness and death so that this industry can do as it pleases? At the very least, these important issues must be addressed and compensated for before continuing on in the same fashion. It is galling that Cheney's Halliburton Exclusion, approved by our elected officials, has rendered it impossible to learn what sort of chemicals are in the mix, and is but another example of putting corporate interests above human health and the environment. The frackers need to be restrained until they learn they cannot go around disabling and killing men, women and children with their toxins and destroying property values with impunity, and that will necessitate some well thought out legislation from our government, if there is such a thing, which I doubt, since it is a rare event when congress enacts legislation that is to the advantage of the people rather than to big money. Please prove me wrong. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. More and more recent studies have shown that fracking operations contaminate the air and water of the people who live in the communities in which they take place. Fracking has also contaminated aquifers through the geologic process of "communication" of fracked toxins through fracked cracks and gaps in layers of stone and sediment that open onto aquifer systems. This can contaminate drinking water across multiple states in some areas—for hundreds if not thousands of years. Fracking is and always was a bad idea that lined the pockets of immoral greedy speculators and profiteers like Dick Cheney. No thanks.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carolyn shaw

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tom simonian

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Every citizen can commit to saving energy - remember the CONSERVATION aspect of the formula. We must do this. Plus, we can convert our energy supply system rapidly to wind/solar/wave/geothermal if motivated to do so. Fossil fuels can be phased down quickly. Leadership by the executive branch is the way to do this since congress is more & less dysfunctional. The U.S. military is the prime waster of fossil fuels for minimal results. Let's ask the right question: do we need to frack (kill) our village in order to save it??? That is just ABSURD.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a danger to the environment and especially bad for the aquifers. Because of this, Fracking should be banned, at least until the process becomes transparent, research is carried out on the process, and VALID safeguards are in place. Exporting fracked gas would create more demand, damage our local environments further, put money ONLY in the hands of the power companies, and mean that America would lose its access to this resource...which at this point is a toxic threat. Please, do not allow the export of fracked gas.

Sincerely,

Louise Simonson
6 Steinway Court
Suffern, NY 10901

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jeannine Weidner

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We have already ensured a future of more climate changes: drought and wildfires in some areas, floods in others, more severe storms, melting glacial water storage areas, melting of permafrost and release of methane gas. The fossil fuels in the ground must remain there, replaced by renewable energy, lest the global climate change become more catastrophic.

Hydraulic fracturing is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Bringing LNG ships near bridges and populated areas would be a tempting target for terrorists, and even the risk of accidental rupture and explosion cannot be as low as the industry claims. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

David Chandler

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne Congdon
1573 Skyline Park Loop
Eugene, OR 97405

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Protect the lives of countless Americans and the environment by resisting the industries that foster and promote development of fracking procedures. Do the Right Thing. Thank you.

Sincerely,

Genevieve yuen

RE: 2012 LNG Export Study

To Whom it May Concern:

Without further refinement of techniques, fracking will continue to be a toxic threat to American communities and the climate. If fracking is absolutely necessary, it should proceed cautiously and only be used to meet our domestic needs for natural gas. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jason Fish

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. New Mexico and the Southwest in general is under severe drought conditions. NM has had major fires the last two summers, and towns now are having to coordinate water supplies in case of just the normal kinds of fires - someone's home, say. And YOU are going to allow what remains of our ground waters to be polluted by fracking? MAKES NO SENSE! - OTHER THAN BEING COMPLETELY SOLD-OUT TO CORPORATE INTERESTS. How do you explain this to your children? That there was a moment to slow climate warming and your DOE speeded it all up.

Sincerely,

Sheridan Phillips

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Gabriel Landes

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking poses some serious concerns. Liquifying the gas for export causes additional climate impact. I oppose fracking, at least until a less environmentally impactful technique is made available. Exporting it adds insult to injury. At minimum, let's keep the gas here.

Sincerely,

Joe Newton

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Maija Veide

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Marc Couacaud

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports is unacceptable because it would immediately and dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry unregulated access to huge foreign markets. The pollution caused by fracking and by burning the fuel must stop now. It is profoundly important that you act forcefully to stand up to the fossil fuel industr. I specifically ask you to deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Recently, the Department of Energy received a study, authored by NERA Economic Consulting for DOE. It is seriously flawed. The Department must correct the flaws before using it as part of any LNG export decisions. Without reliable information, no decision can be made and no permits issued. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas, at least until realistic projections of actual domestic requirements and environmental impacts are done.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Hays

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sharon Cunningham

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Cindy Allen

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking and the export of fracked gas will dramatically increase greenhouse gas emissions (fact not conjecture). Based on last year's higher overall temperatures, droughts and extreme weather events, this is probably our very last chance to do something to slow Global Climate Change. If you do nothing about this you will go down in history as the administration who put the final nail in our collective coffin.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carol Steffes

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Polly Jackson
509 Morningside Dr, Ne

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lin snider

RE: 2012 LNG Export Study

To Whom it May Concern:

Unpolluted drinking water is a basic need and a natural right of all beings. All groundwater and aquifers should be a Public Trust. It is not sufficient to address serially each insult to the integrity of our water resources, community by community. Clean water IS a national trust resource. Fracking is a toxic threat to American communities, our basic human rights, and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We can and must replace our reliance on fossil fuels and dirty, expensive, dangerous nuclear with the abundant clean energy that shines on us and blows around us every day. We can, and we must.

Sincerely,

Sally Shaw

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The health threats to both people and the earth are so much greater than the need for the fossil fuel industry to make profits. The people, our economy and the earth are sick. Let's make them well while creating jobs that do not add to the 'illness'. Sustainable jobs in clean energy, and coal is not clean, can generate profits to the energy industry while providing the planet and its people better livability.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Vicki Caraway

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Suzanne Roundy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jim Urban

RE: 2012 LNG Export Study

To Whom it May Concern:

The technique known as "fracking" is nothing more than a permit for large multi-national companies to exploit finite resources while seriously degrading our environment. They profit in the short term, we the people lose and get saddled with huge cleanup costs. This cannot proceed. Letting these multi-national companies then EXPORT the gas adds insult to injury. The fossil fuel industry has had too much of a free ride on the backs of American taxpayers. We will not tolerate it any more. Any applications to export natural gas derived from fracking should be denied. Fouling our nest to benefit other countries is not a sound policy.

Sincerely,

Patrick Murphy

To Whom it May Concern:

Gas prices should not be the only economic consideration here. Victims shouldn't be forced to pay for extra health care due to pollution (and thus have less money to spend on other things). Neither should taxpayers be forced to pay higher premiums. New fracking operations should be prohibited until it can be done cleanly. To limit the need for new operations, exports should be limited, perhaps to oil byproducts.

To Whom it May Concern:

Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO₂ than burning gas in the U.S. Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall. DoE should deny so many applications for large scale projects to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We should not be exporting natural gas if it means expanding fracking in this country. This is a danger to our limited water supplies and to the health and well being of our citizens and our land as well. Please do not allow this!

Sincerely,

Leah Popp

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Steven Ganter

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eric Huerter

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Z Bahti

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Rothstein

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. I believe it is dangerous to the planet and am not in favor of it being allowed at all - here or anywhere on this planet. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and let property owners refuse to allow fracking on their property. Force fracking companies to reveal what chemicals are used in their fracking processes. We have a right to know more about what kind of damage they are doing to this planet.

Sincerely,

Mary Harris

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. NO to: fracking, coal-fired power plants, and the Keystone XL pipeline. I'm tired of paying \$billions to fossil fuel corporations for the planet's premature death.

Sincerely,

Valerie Thatcher

To Whom it May Concern:

Due to "trade secret" protections far too little is known about the fracking process and the amount of threat it poses to all of us. We know for certain that the process uses enormous amounts of fresh water, and that recovered water is classified as toxic. What else is in that water? Before allowing large-scale export of natural gas produced in this way, why don't we first get a good knowledge of what substances are being used, and what the real results are?

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I own stock in companies in the oil and gas business, but I still oppose this expansion. It might be in my short-term interest, but it is bad for the country.

Sincerely,

Gordon Gibson

RE: 2012 LNG Export Study

To Whom it May Concern:

The fracking industry wants to start exporting fracked gas all over the world – one of the greatest threats to our fight against fracking and climate change, because it would dramatically increase the scale of fracking in this country. Last month, President Obama’s Department of Energy released a terrible report that downplays the devastating impact that fracking, burning and exporting gas has on local communities, our economy, and on the climate.¹ The fracking industry has already applied for permits to build 19 massive export facilities to ship gas overseas. Unless we oppose gas exports now, there is a good chance the Obama administration will use this report to rubber-stamp these applications. As President Obama begins his new term, we need to urge his administration to take a stand to protect our climate, not continue giving fossil-fuel companies free rein to destroy our health, communities and our future. Fracked gas is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal.² Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO₂ than burning gas in the U.S.³ Furthermore, exporting fracked gas would increase domestic prices, giving utility companies an incentive to use coal-fired power plants - which are beginning to be phased out, largely due to the low price of natural gas - and increasing U.S. carbon emissions overall.⁴ Bottom line: No matter how you do the math, a world that runs on natural gas is a world wracked by climate chaos and extreme weather – deadly superstorms, wildfires, droughts, and floods.⁵ We need to move away from fossil fuels, not make massive investments in new infrastructure that will lock us into dirty fracked gas for years to come. Green-lighting fracked gas export terminals would have a disproportionate impact on communities near fracking operations. People living near fracking operations cope with terrifying local impacts: contaminated—even flammable—drinking water, cancer-causing air pollution and smog, massive open pits full of toxic wastewater, huge fleets of diesel trucks, chemical spills, and pipeline explosions.⁶ Some residents have even found fracking chemicals and heavy metals in their blood.⁷ In short, the human toll taken by fracking is already far too high. Giving the fracking industry an incentive to expand its operations by allowing it to export fracked gas overseas is nothing short of irresponsible. For the United States, 2012 was the hottest year in recorded history. A slew of climate change-driven disasters—including deadly Superstorm Sandy—underscored the dangers associated with unchecked climate change. It’s time for President Obama to answer the call of history and stand up to the fossil fuel industry—starting with blocking fracked gas exports. 1. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Howard Friel
11163 Wheeler

U.S. Department of Energy

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Madeline Light
360 West Washington Ave
Madison, WI 53703

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Aubrey Iwanicki

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We cannot be deterred from the critical goal of eventually ending the use of all climate destroying fossil fuels. Allowing the export of fracked gas from our country only speeds up the process of world climate change and leaves our land, air, and water contaminated for the singular profit of the gas corporations. This goes against the need for acting in the public interest and is in fact a suicidal policy given the facts we now know about our fragile ecosystems here on earth. This is for real and not the rantings of a fringe group of environmentalists. The short term gain for a few is more than offset by the terrible and unthinkable loss of the majority. Stop all fracking immediately! Please!

Sincerely,

Robert Barendse

RE: 2012 LNG Export Study

To Whom it May Concern:

We need to keep our natural resources here, not export them. The process of exporting keeps prices higher for americans and building terminals, pipelines, and shipping destroys the environment as well as fracking itself. Natural gas is limited, lets not sell it all away and keep ourselves dependent on foreign oil. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sema And Bob English

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Scott Clark
114 Cutler Rd
Greene, NY 13778

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We keep looking for "cures" to illnesses when what you are doing to the planet may actually CAUSE many of these maladies. We saw deaths last summer because of the intense heat. Please don't sacrifice the health of Americans to do more fracking (contaminating our water supply) in order to export natural gas. The same goes for allowing fossil fuel companies to ruin living conditions for Americans. Put some real effort into utilizing clean energy sources.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Barbara LAVEY
3085 Tioga Terr
Deltona, FL 32738

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. It is very likely that fracking will release toxics (oil, natural gas, or the fracking chemicals themselves) into water tables (aquifers) in the region of any and all fracking. The cost of compromised aquifers has must be part of any cost-benefit analysis of fracking. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a health threat in communities all across America. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets while doing nothing to decrease energy costs here at home. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Greg Clerke
2891 Co Hwy 8
West Oneonta, NY 13861

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Frces Scafidi
823 Lagun St.
Santa Barbara, CA 93101

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Cracking scares the hell out of me, they want to start doing more of it here in California but it should be outlawed. We have too much to lose. The toxins it puts into our environment and the risk of it triggering earthquakes with all of our fault lines is just too great a danger.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Hernandez
14304 110th Ave. Ne
Kirkland, WA 98034

RE: 2012 LNG Export Study

To Whom it May Concern:

It is way too early to allow even yet more expansion of this process... the industry should have to first prove that it can do this safely... The conservatives will pound the administration for forcing a delay... but that will allow time to reduce the damage to water and thereby benefit generations to come...

Sincerely,

Michael Hayes

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jerry Romain

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Candelmo

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Margaret Johnson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ronlyn Schwartz
