Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Roger Sears

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. That communities would have their water usurped and wastefully consumed, be put at risk of contamination, have their rural and urban areas heavily industrialized, their roads impacted by truck traffic, the air polluted with VOC's, and the fragile climate impacted with escaping methane, means we don't see a healthy future in this destructive practice. That the product would be sold offshore would be a further detriment, causing rising local prices for fuel that has been obtained at great cost to healthy communities.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Karen Marvel

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. You almost certainly agree that the most precious thing we have is life. Fracking imperils not only plant life and animal life, including human life and health – but also the life of the planet and its ability to sustain life now and in the future. The water required for the fracking process is forever fouled – stealing it from communities that, of course, depend on it. Where will human life be without potable water? Dear Mr. President, use your position to help save the planet and its inhabitants – including the American people: Do not approve export terminals for fracked gas.

Sincerely,

Meredith Averill

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ben Yoke

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Laurel Tumarkin
236 Livingston
Brooklyn, NY 11201

RE: 2012 LNG Export Study

To Whom it May Concern:

Why would the United States want to wreak destruction upon our environment, sicken our people, to extract natural gas through the heinous fracking process, only to export it to other countries??? Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. **STAND UP TO THE FOSSIL FUEL INDUSTRY** and deny all applications to export natural gas. Extracting and exporting natural gas at the expense of our environment and the American people, to give the fossil fuel industry mega profits is just **WRONG!!!** Please rethink this! The tax payers are already giving those industries gigantic subsidies, which they do not deserve! The environment matters more than major profits for industries which are already bloated with wealth.

Sincerely,

Kyra Shair

SLOW DOWN. THE JURY IS STILL OUT. CURRENTLY AVAILABLE EVIDENCE SUGGESTS FRACKING IS FRAUGHT WITH DANGERS. NATURAL GAS IS AT BEST A STOPGAP ENERGY RESOURCE AS IT IS ONLY marginally less LETHAL THAN COAL OR OIL. PLEASE, WE URGE YOU, DO NOT APPROVE BUILDING NATURAL GAS EXPORT TERMINALS WHICH WILL ONLY ENCOURAGE A QUESTIONABLE ENERGY STRATEGY. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Valerie Harrison

RE: 2012 LNG Export Study

To Whom it May Concern:

DOES ANYONE READ THESE LETTERS? Why is it that we, the people, have to tell you, the president and congress, why what you are doing is wrong? Heads of corporations only think with their wallets and they don't care what happens to the planet. You are intelligent people and you already know this! I have been writing to you for years about my grandson who has asthma. Fracking, burning, exporting gas, coal transportation via railway, anything that ruins any little bit of air is going to land my little guy in the pediatric ICU! You preach that you want to change all these things...do you really? PROVE IT!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Derek Currie

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking has nothing to offer to anyone: It destroys the land, causes damage to anyone living near the fracking process, poisons the water, and doesn't produce enough energy to pay for itself, let alone cut through the energy "deficit". Fracking began as ignorant and continues in that same track. Isn't it time for EVERYONE to just say NO to fracking?

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It ay be initially more difficult and more expensive to get the wind and solar and other environmentally safer sources of energy going and good enough to even export, but I implore you to keep the effort to change energy sources away from gas and oil. High schools are teaching the environmental students that hydrofracking is so dangerous for our environment It seems like a "no Brainer " that we discontinue any forward motion on the hydrofracking businesses. Before we ruin all the good water, etc, please do NOT allow exporting of gas. Your efforts in the best interest of our nations real people in real communities is very much appreciated. Thank you.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patricia Pearson
4500 19th St Lot 567
Boulder, CO 80304

RE: 2012 LNG Export Study

To Whom it May Concern:

It's OUR own DUMB fault ! ! ! AMERICA continues to WASTE over 70% of the energy we consume ! ! ! 100's of Millions of lights burn unnecessarily every day and night all over AMERICA ! We OverHeat, OverCool, & OverDRIVE as if it doesn't matter. Our hedonist waste is inexcusable, unforgivable, and suicidal. Global warming continues to increase with our persistent waste and overuse of fossil fuels. Human extinction will be the reward for our failure to rapidly and broadly implement renewable energy supplies. The incentives necessary to implement sustainable and renewable energy supplies can only occur when we employ the economics of TAXING ENERGY. Crude oil must be taxed at \$160 per barrel(42 gal) and this 'energy consumption tax' be OFFSET by making Federal Income Tax begin at \$60k. Only with a substantial and tangible dollar consequence/reward will there be the incentive to conserve energy. World demand for energy cannot continue to be supported by the dwindling and costly fossil fuel 'supply'. Ford, GM, and Chrysler continue toward bankrupt, yet basically continue to do business as usual. They must transition to the lucrative business of building SOLAR and wind 'energy producers' for the world's 6.7 BILLION people reason\$. They already have the needed infrastructure to mass produce, sell, and install these products. Failure to innovate the auto industry away from energy consumption to energy production will ultimately cause the ruin our economy and the environment . Look around you; the energy waste is EVERYWHERE !! Use your influence and resources to promote Energy Conservation. Americans need to be ever reminded/told to STOP the/our/your Energy WASTE ! RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked-gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. It is questionable whether we should even be using hydrofracking for domestic use; the risk to groundwater is real. That makes it certain to me, and to many others to whom I have spoken, that there should be ABSOLUTELY no overseas sales.

RE: 2012 LNG Export Study

To Whom it May Concern:

In addition to agreeing to the following statement I will add that I live in the North Fork Valley in Colorado. This valley has vineyards and the largest concentration of organic farms in the state. The entire valley is threatened by the impending leasing of a noose of 21,000 acres of BLM administered land. Why? so gas companies can export our precious natural resource overseas? This is insane. Please, food is more important to the people of our state than shipping gas for profit to the corporations. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Laurel Marshfield

To Whom it May Concern:

I can not understand why we are even considering the destruction of our precious resources to enrich the fossil fuel giants. Once they squander water and poison aquifers throughout the country with unnamed carcinogenic chemicals, it can never be used again. The risk to the general public is far too pronounced to tolerate a massive new assault on the environment by corporations incapable of proving their technology for extracting fuel is benign. RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please stop fracking! Mother Nature is warning us and warning us to stop! Scientists are telling why Mother Nature is so troubled and frightening and destructive. Why don't we listen! Why don't we stop the causes like FRACKING!!!!!!

Sincerely,

June Peterson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mary Woods

RE: 2012 LNG Export Study

To Whom it May Concern:

With each frack we permanently lose 7-10+ million gallons of water from our ecosystem. This is water that cannot be restored to usability. It is insanity to be squandering our water resources to gain natural gas. We can live without gas but not water!!! To then ruin our country so the gas and oil industry can make even larger profits is doubly insane. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Put an end to fracking. Save our citizens and our planet.

Sincerely,

Susan Wallace

RE: 2012 LNG Export Study

To Whom it May Concern:

The USA has, for decades, worried about becoming energy independent. I am against fracking for the environmental dangers it engenders and wish to see it stopped or at least heavily regulated. Just because fracking allows us to extract natural gas from our country's reserves at a faster than needed rate, we should not be selling it outside our own borders. Rather than exporting a non-renewable natural resource which, in the future we will wish we still had, let us encourage the export of technology to other countries so they, too, can weigh the balance between extracting energy and polluting their groundwater. The chief failure of our economic system is that no one has read Adam Smith's SECOND book where we would learn to balance the almighty dollar with other considerations. By the time we figure out its not good, the wealth has been stripped by the top 1% and the people are left with the mess they created.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Dee Gee

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Brian Hayes
16849 Flanders St.
Granada Hills, CA 91344

RE: 2012 LNG Export Study

To Whom it May Concern:

The evidence shows that fracking is a toxic threat to American communities and the climate. Why, then, would you permit fossil fuel companies to endanger the lives of Americans? Green-lighting the export of fracked gas would dramatically increase the scale of and demand for fracking in the United States because the fossil fuel industry—which doesn't care about the safety and well-being of Americans—would have access to huge foreign markets. All they care about is profits. We need for YOU to care about the world. That's why we voted for you, and that's why you're president. Please step up and stand up to the fossil fuel industry and deny all applications to export natural gas. And please, keep your promise and do more to promote nonpolluting alternative energy development. Thank you very much for your time and consideration.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Philip Perry

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Randi zwaduk
235 Leguin Mill Rd
Locust Grove, GA 30248

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Meredith West

Stand up to the fossil fuel industry and deny all applications to export natural gas. Agree 100%, to many local problems to be solved now in the year 2013. I would strongly urge more planning to develop new options for internal USA systems. And work on the Health, Environmental, Economic problems. Do not make the mistake of committing BIG bucks to shipping gas before WE have tested and operated the basic operations. BEWARE of loud voices with little verified DATA.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robin Jones

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jungoui Hwang
3520 147th St Apt 11f
Flushing, NY 11354

RE: 2012 LNG Export Study

To Whom it May Concern:

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States and not enough is yet known about the environmental and societal downsides of fracking to allow for such a significant expansion. Besides, if our intent is to become energy independent, why would we ever give up gas that we will eventually need for producing chemical feedstocks just to give additional support to an industry that has no need for such support? Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Meredith Grosshandler

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Christopher Wilson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

June Abner
3955 Park Blvd., Apt. 901
San Diego, CA 92103

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking was first presented in a disguise as a way to end American dependence on foreign petrol products. Now the industry's goals are unmasked and are clearly focused on its profit margins...not energy independence for this country. Fracking itself is a huge environmental/economic risk; its only saving grace was reducing American reliance on foreign energy sources. Now, under these proposals, America takes on all the known and unknown risks of the practice while selling the product abroad to the highest bidder for the enrichment of the oil/gas industry. An unforgivable sellout of the nation's trust .

Sincerely,

Nancy Champion

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Johnson
4104 Chapel Hill Spur
Sullivan, MO 63080

RE: 2012 LNG Export Study

To Whom it May Concern:

Say no to fracking just another toxic threat to American communities and the climate. Embrace and support wind, solar and other sustainable energy sources. Do not allow fracked gas exports. While local areas would suffer the environmental consequences, exporting the fracked gas would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Our environment can't afford it and the people do not want it. Stand up to the fossil fuel industry. Quit subsidizing and yielding to their every demand. Insist on strong environmental protection of the air and water. Deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Douglas Jerry

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Don't bow to the whims of the petroleum industry. It is obvious that your administration is getting ready to offer permits for fracking and our Dept. of Energy has downplayed the devastating impacts on our communities, the economy and the climate. Reject the applications to export fracked gas. Methane is a greenhouse gas that leaks from gas wells, pipelines and other infrastructure apparatus devices. Fracking may be more dangerous to the environment than coal burning. Nevertheless, we must withstand the onslaught of energy companies to get their way through lease contracts and lax environmental standards. President Obama, you were reelected to fight against multi-national corporations from taking over all aspects of our government. Now is the time to show that you understand that concept. Now is the hour to make your stand. Don't let it slip away.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Anne Haglund

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mindy Cox

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Lisa Wice

RE: 2012 LNG Export Study

To Whom it May Concern:

Please do not allow fracked natural gas to be exported from the U.S. Fracking is a toxic threat to American communities and to the climate. We should keep fracking for natural gas to a minimum and make sure it is carried out in an environmentally safe manner. Allowing fracked gas to be exported would dramatically increase the scale of, and demand for, fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Please deny all applications to export natural gas from this country. Thank you for your consideration of this important issue.

Sincerely,

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Hugh English

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. In addition to all the air pollution and global climate change dangers inherent in fracking, the process uses incredible amounts of water. Water is a scarce resource getting more scarce and polluted around the world. We simply cannot afford to allow any fracking due to the waste of water—allowing natural gas from fracked wells to be sold overseas is insane.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Dolde
4672 Alaska
Saint Louis, MO 63111

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

William Beaty

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. At a time when we all agree that we need to become more independent of foreign fuel, what sense does it make to export ANY of our fossil fuels. If the big energy companies are so unpatriotic to follow big bucks instead of providing for the comfort of our own citizens in a time of stress, it could be viewed as treason. The government shouldn't have to forbid exporting, but greed by big energy makes it necessary.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Refugio Mariscal

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. For putting up with these dangerous practices, the recovered gas should be earmarked to US consumption only. We were told that if fracking were allowed, our energy costs in the US would be reduced. If exported onto the world stage, demand will increase, thus driving the cost of energy to US citizens. Those same citizens will be required to foot the taxes that will be needed by the US government to clean up and mitigate the pending environmental disaster that is such to result of negligent fracking operators. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris sasaki

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama We need to move away from fossil fuels, period – and you know that. Please do NOT allow export fracking. Listen to the scientists. If you allow the export of fracking...it will contradict what you've pledged about working on climate change. Your many, MANY environmentalist supporters are watching you very, very closely on this. What will your legacy be, Mr. Obama? The time is now. Don Lieber New York, NY

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Susan Quintana

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama: Fracking is a toxic threat to American communities and to the climate. Allowing natural gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Further, our natural resource will not be staying local and will not in time, be available for us if it is ever needed. We are asking for your protection President Obama. Communities and families are in harms way. The Center on Constitutional Rights are calling alarm bells related to human rights issues. Fracking has never been done safely in any area without water contamination. It is not a fact that can be denied. The most rural and economically underdeveloped and underprivileged communities are targets. Clearly throughout the country these types of undeveloped communities are in immediate danger with little help available. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please make it a point to protect American Citizens in the most underdeveloped and underprivileged communities in upstate NY. We want our American Farms and farmers to remain the foundation of our country, those who have truly sustained our natural resources. Sincerely yours,

Sincerely,

Kim Felter

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Carl Schultz
2400 Forest Drive #261
Inverness, FL 34453

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The environmental costs of fracking, including the pollution of our waterways, the decimation of our air quality, and the increasing possibility of earthquakes in areas where fracking is most prevalent, is not worth the risk of the energy resources we derive from fracking. The companies that are blindly pursuing this self-centered, shortsighted agenda need to be reined in, not given increased freedom to further endanger our environment. Please bring a halt to this terrible trend before it's too late.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jolianne Baum

RE: 2012 LNG Export Study

To Whom it May Concern:

What can we do to cut CO₂? Hair becomes toxic gas How much does hair from once a year haircut, [picture] December 23, 2012, weigh? Is your clipped hair swept to trash? Garbage from Portland travels upriver through Columbia River Gorge National Scenic Area 140 miles to landfill above Arlington, Ore. Carbon dioxide from oxidizing fossil fuel is changing the climate, 2012 shattered heat record by unprecedented full degree, Jan 9, 2013, The Oregonian. Engine of garbage truck oxidizes fuel to propel the mass (Physics) of hair heat + carbon dioxide + water. Organic matter-hair in landfill combines with cold coffee—8.3 lbs/gal—thrown out at caf, then rots. Gas from anaerobic decomposition in sanitary landfill of wet organic matter-carbohydrate-C₆H₁₂O₆ is methane 3CH₄ + 3CO₂. How to dispose of waste and make the least toxic gas? Hair (or fingernails) collected after clip then spread on landscape is eaten by worms or rots aerobically releasing a tiny amount of heat + CO₂ + H₂O: decomposition = photosynthesis in reverse. Coffee poured on earth begins an effortless, short, infinite journey. Sincerely, Zephyr Thoreau Moore Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

So what does exporting natural gas have to do with energy independence? In my opinion - nothing - it has everything to do with unsustainable economic growth at the expense of future generations and nothing to do with conservation and rationing our finite natural resources or meeting our own energy needs. Please reject any applications or facilitation for the exportation of natural gas. Let's stay focused on America's energy needs, conservation and most importantly protecting our environment from the harmful effects of needless hydro fracturing for natural gas. We need to move away from the global warming tipping point that threatens the existence of so many.

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama, It is already bad enough to pollute our own country eking out every drop of oil in order to sustain our own energy needs, and to create independence from foreign oil, but it is entirely another to pollute our country in the name of foreign exports. Which is a clear example of "cutting our nose off to spite our face" . I urge you to step back from the super-power mentality and see this country as something sacred to be preserved. For we are the ones that live here after all. Don't exploit our country in the name of greed. I appreciate the chance to be heard. Sincerely, Bonnie Marciante

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. The "reason"(excuse) we were sold for fracking in the first place was to ensure "energy security" by providing more domestic supplies of fossil fuels. Now we see it was just a ploy to get access to more land and resources and make more money at the expense of the people. Stop selling our "energy security" overseas. Require all natural gas derived from the fracking technique be sold domestically.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We, the American people, have been told that there is enough natural gas in our country to supply our needs for 100 years. We are told that by the end of that 100 years, renewable energy will be available and affordable. We are told that we are supposed to cooperate with the fracking industry because we need the energy to become self-sufficient. But now the companies controlling the industry want to export the gas. If it is exported, then we won't have enough to fuel us for any length of time. But we would still have to suffer the consequences of having fracking in our towns and countryside. Those of us on wells won't be able to rely on our water. Those that live or work or go to school near a gas well won't be able to trust the air we breathe. IT JUST DOESN'T MAKE SENSE TO BE DRILLING FASTER AND EXPORTING WHAT IS AVAILABLE!!

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PLEASE! Let's seek out renewable resources - not the fuels that will run out, that will harm the citizens of our planet, that will scar our landscapes and poison our water in the process of retrieving them for a temporary fix. We owe it to our children and grandchildren not to destroy our life-sustaining water, of which there is no more.

Stand up to the fossil fuel industry and deny all applications to export natural gas. Mr. President - I was so happy you won a second term in office as the Republicans have no concern for our environment. But it seems that your administration is not much more concerned and that has been a great disappointment to me. How can intelligent people ignore the facts of fracking? Please protect our environment and stand up to the fracking industry. Encourage the green industry with tax credits and what ever means are at your disposal. This planet can only recover to a certain point and then it will just be too late. Do not let that happen. Please.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. I'm not happy with fracking; but I recognize the value of being more independent of foreign energy sources. Exporting fracked gas would do much more damage to communities that are already affected by fracking. The only reason for exporting it would be to enrich the companies producing it. Damaging the people of our country to enrich a few is immoral. Please don't let this happen.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Fracked gas is mostly methane, a potent greenhouse gas that leaks from natural gas wells, pipelines, and other infrastructure. Recent research even suggests that methane emissions from fracked natural gas operations are so high that fracking may be worse for the climate than coal. Exporting fracked gas – which requires a carbon-intensive process of liquefying it, cooling it to -260 degrees Fahrenheit, and shipping it – produces 20%-30% more CO2 than burning gas in the U.S. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Every speech I heard during all the campaigning said oil drilling in our public lands and fracking in our backyards would make us independent from other countries fossil fuels. Selling our cheap to produce natural gas for profit does not fit into this plan. While we watch our countries environment destroyed the prices of fossil fuels do not change for the better. Just like always, we sell ours for profit and then buy other countries so the big corps can profit. Please stand up for the American citizen. Keep our fossil fuels in the US.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Gold

"3530 Henry Hudson Parkway East, Apt. 4c"

Bronx, NY 10463

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jack Schonewolf
417 Riverside Drive Apt. 1b
New York, NY 10025

Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. - FRACKED GAS IS DEMONSTRABLY DANGEROUS IN ITSELF & THE WAYS IT HAS TO BE SHIPPED (PIPELINES) ARE INHERENTLY HIGHLY DANGEROUS!! NO FRACKING!! AMERICANS DON'T WANT IT!!

Sincerely,

Jynx houston

RE: 2012 LNG Export Study
To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas to increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas to foreign markets by Chris Hedges Over the past year I and other plaintiffs including Noam Chomsky and David Greenberg have filed a lawsuit in the federal courts to nullify Section 1021(b)(2) of the National Defense Authorization Act, an egregious section, which permits the government to use the military to detain U.S. citizens and hold them indefinitely in military detention centers, could have been easily fixed by the House had the opportunity this month to include in the 2013 version of the NDAA an amendment that would exempt all U.S. citizens would be exempt from 1021(b)(2), leaving the section to apply only to those who are not U.S. citizens. The due process for citizens was something the Republicans and the Democrats, along with the media, failed to do. The fate of some of our most basic and important rights enshrined in the Bill of Rights, the Fourth and Fifth amendments of the Constitution will be decided in the next few months. If we fail us, a gulag state will be cemented into place. (Photo: AP/Alex Brandon) Sens. Diane Feinstein and Mike Lee, R-Utah, pushed through the Senate an amendment to the 2013 version of the NDAA, although deeply flawed, at least made a symbolic attempt to restore the right to due process. A House-Senate conference committee led by Sen. John McCain, R-Ariz., however, removed the amendment from the bill last week. I was saddened and disappointed that we could not take a step forward to protect at least American citizens and legal residents could not be held in detention without charge. Sen. Feinstein's statement issued by her office. To me that was a no-brainer. The House approved the amendment by a 315-107 vote late Thursday night. It will now go before the Senate. Several opponents in the House, including Rep. Morgan Griffith, R-Va., cited Congress refusal to guarantee due process for all citizens as his reason for voting against the bill. He wrote in a statement after the vote that he may fear being arrested and indefinitely detained by the military without knowing what the charges are. The Feinstein-Lee amendment was woefully inadequate. It was probably proposed mainly for show but nonetheless it resisted the concerted assault on our rights and sought to calm nervous citizens and prevent destruction of the rule of law. The amendment failed to emphatically state that citizens could not be held in military custody. Rather, it said citizens could not be placed in indefinite military custody. It said that there could have been a trial by military tribunals. Citizens, under the amendment, could have been held in military custody without due process in a civil court. Still, it was better than nothing. And now we have nothing. The amendment concerning the NDAA make it clear that Congress as a whole has no stomach for the fight. Sen. Feinstein said attorney Bruce Afran, who along with attorney Carl Mayer has brought the lawsuit, is the lead attorney in which we are attempting to block Section 1021(b)(2). The only hero so far in this fight is Judge Katherine B. Forrest of the Southern District Court of New York. Forrest in September granted a permanent injunction invalidating Section 1021(b)(2). The government appealed for a stay pending appeal meaning the law would go back into effect until the Court of Appeals issued a ruling in the case. She refused. The government then went directly to the Court of Appeals, which will hear oral arguments in January, granted the governments request for a temporary stay while the law went back into effect. If the Court of Appeals upholds Forrests ruling, the case will go to the Supreme Court within weeks. President Obama should never have appealed this watershed case, said. But now that he has, the fight may well go all the way to the Supreme Court. As the case goes forward, we will slide more toward authoritarianism or whether the judicial branch of government will stand up to the erosion of our civil liberties. Since 9/11 Americans have been systematically stripped of their rights. Our calls are monitored under [George W.] Bush and Obamas warrantless wiretapping programs. We are relentlessly in public places, there are drones over American soil and the police control our movements with paramilitary gear and tactics. As long as Obama and the leadership of both parties are in power, our streets, we will fight. This is unacceptable, un-American and unconstitutional. We know the government will appeal, but we did not expect it to act so aggressively. This means, we suspect, that the government will use, most likely to hold people with U.S. and Pakistani dual citizenship or U.S. and Pakistani citizenship at military detention sites such as Bagram. If the injunction were allowed to stand during the appeal, those who were being held by the military without due process, the government would be in contempt of court. Justice Ginsburg's 112-page opinion is a stark explication and condemnation of the frightening erosion of civil liberties. In her opinion she referred to the Supreme Court ruling *Korematsu v. United States*, which upheld the governments internment of 110,000 Japanese-Americans without due process during World War II. The NDAA, like the old versions of the act, allows similar indefinite detentions of Muslim American citizens. Section 1021(b)(2) defines a covered person as a person who is a member of, or substantially supported al-Qaeda, the Taliban, or associated forces that are engaged in hostilities with the United States or its coalition partners, including any person who has committed a belligerent act or has provided such hostilities in aid of such enemy forces. The section, however, does not define the term "substantially supported" or "associated forces." The vagueness of the language means that the government can detain who as journalists have contact with individuals or groups deemed by the State Department to be terrorist organizations, could along with others find themselves seized and detained under the provisions of the act. We know that the steady deterioration of the economy and the increasingly savage effects of the recession and widespread social instability. It knows that rage will mount as the elites squander dimming the lives of the poor, as well as the working and middle classes, are driven into destitution. It wants to keep us cowed, afraid and under control. It does not, I suspect, trust the police to do the job. Why, contravening two centuries of domestic law, it has seized for itself the authority to detain citizens on the streets and citizens in military detention centers, where they cannot find redress in the courts. The erosion of liberties is being done in the name of national security and the fight against terrorism. The government is protecting us. It is about protecting the state from us. That is why no one in the executive branch is going to restore our rights. The new version of the NDAA, like the old ones, provides a legal shield and shackles to make our resistance impossible. And that is their intention. 2012 TruthDig.com. A regular column for Truthdig.com. Hedges graduated from Harvard Divinity School and was a foreign correspondent for The New York Times. He is the author of many books, including *The Day After Tomorrow*, *Gives Us Meaning*, *What Every Person Should Know About War*, and *American Fascists: The*

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Mike Benson

RE: 2012 LNG Export Study

To Whom it May Concern:

Dear President Obama, I am writing as both a chemical engineer and now a physician. Fracking is a toxic threat to American communities and the climate. Fracking was initially designed to use steam to release hydrothermal energy, not to employ chemicals that are kept secret under the guise of trade secrets and run the risk of damaging ground water and create other iss effects. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Richard Stevens
260 Vaughan Street
Portland, ME 04102

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Jason vogel

RE: 2012 LNG Export Study

To Whom it May Concern:

I do not want to be exposed to the water pollution, air pollution, damage to our food supply and more burning of fossil fuel which is causing climate crisis. We have got to put our effort into renewable energy like most other advanced countries. Don't make a bad situation worse. Please don't agree to anything that increases the burning of fossil fuel.

Sincerely,

Kathleen M. Schmick

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nicole Sylvestre

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Fracking destroys the land, and the farms that have sustained our lives and been in the families for decades. When sludge bubbles up in fields they become toxic and useless, when water becomes flammable it becomes useless!! Why are we allowing what sustains us and is beautiful to be destroyed so we can no longer live or enjoy life? WITHOUT A HEALTHY ENVIRONMENT THERE IS NO ECONOMY OR LIFE!! Please stand up for green sustainable energy sources!

Sincerely,

Marilyn McClelland

Stand up to the fossil fuel industry and deny all applications to export natural gas. Alright Steven, What happened to the pneumatic cars please? And even if people were so berift as to insist upon the sole use of the entropic rather than the addition of the enthalpic branch of any cycle with respect to various energy means, then surely H H O would still far cheaper, more practical, and less dangerous than fracking, ne?

RE: 2012 LNG Export Study

To Whom it May Concern:

Obama Admin, be bold, a lot bolder than taking this stance solidly in the middle of fossil fuels. We are perilously close to sealing our fate as a ruined planet with all the unburned hydrocarbons we pump into the atmosphere. Fracking, with its horrific effects on groundwater (didja see Matt Damon's movie?) will just hasten the conversion of the planet into a graveyard for the masses. Turn this ship around, right into green/renewables right now, and borrow whatever money is needed or talk the big fossil fuel companies into using their capital to hasten the stepping off into renewables that they are already planning. Talk them into investing in renewables to put all the workers who will be swayed by the economic benefits of fracking to get behind renewable and the economic benefits thereof, to say nothing of saving the frackin' planet. We can't both go forward with taking more carbon out from under the earth's and seas' surfaces AND protect the environmental so the planet has a chance at remaining habitable.

To Whom it May Concern:

Please stop this train wreck of not fracking gas with its high volume water & chemical usage. States and localities cannot even keep pace with regulations alongside the onslaught of permit applications. They are overwhelmed by age old laws and corporate power. Polluting our water and air should be overcome by all energy efficiency gains alongside solar, thermal, and wind sources. As a citizen, one has to wonder how much the United States government is beholden to corporations & lobbyists versus its citizens. Stop fracking domestically and for export.

RE: 2012 LNG Export Study

To Whom it May Concern:

I don't like fracking, but fracking to export is contrary to the original justification the oil and gas industries used, ie. national security and energy independence. If we are producing so much fracked fuel that we need to export it, then obviously production needs to be restricted. Too much fracked fuel also means lower short term prices which further deter our broader green energy objectives. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Michael Powell

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. PLEASE promote new green technologies! Continuing to depend on fossil fuels will simply hasten the breakdown of the world we know due to climate change. The climate is changing faster than even the scientists had predicted. It is a gravely serious problem and must be addressed by drastically reducing our use of fossil fuels. Please act accordingly.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

James Kanaby
330 1/2 Sacramento St.
Rio Vista, CA 94571

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. We look to your leadership to coax the US into an era of renewable energy and out of the now-bankrupt fossil fuel-based economy. More fracking= more greenhouse gases- and the methane that escapes during the fracking process is 70 times more effective as a greenhouse gas than the CO2 it will eventually create when burned. Just say NO.

Sincerely,

Phil Triolo

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Robert Biser

RE: 2012 LNG Export Study

To Whom it May Concern:

Please realize that although 'fracking' may seem to be the quickest & easiest way to our countries independence on foreign fossil fuels & energy, it has a devastating impact on local & global health, that may be hard to reverse once set into action! A much bigger viewpoint of our future's energy that requires focus & monies to be allocated to R&D of clean, efficient, & healthier options is the approach that is needed. Globally, humanity & the Earth body is at a turning point of either continuing to pollute our basic life supporting resources or learning to collaborate healthy solutions for the betterment of the all for now & into the future. Please take right action & refuse to sign off on the fracking permits. As anyone can see from history, it's often very difficult to "put the genie back in the bottle", once harmful actions are initiated, better to do it right the 1st time.... Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking can pose serious public health threats, yet there exists no comprehensive review of the public health implications of fracking. Green lighting exportation of fracked gas will subject local communities to relentless pressure to submit themselves to this process, and all the environmental, social, infrastructure, and public health challenges it presents. It will be boom and bust all over again, with a legacy of broken communities and failed health. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Martin Manjak

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Nipam Kapani
3123 Chateau Lane
Rockford, IL 61103

U.S. Department of Energy

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas, please. Additionally, no one is thinking about earthquakes which are another side effect of this process. Who will pay for rebuilding if an earthquake causes damage to New York City's fragile infrastructure. This area has been identified as an area threatened by potential seismic activity. Will the big gas companies foot the bill should hydro fracking lead to significant damage. Great Britain banned hydro fracking for this very reason. People who educate themselves about this process oppose it. Please take the time to look at ALL the facts. It is clear we are trying to rush these permits through for the sake of money. Look at the big picture and the future. You can't put a price on a clean environment and all the money in the world won't replace our water supply once it is destroyed.

Stand up to the fossil fuel industry and deny all applications to export natural gas. Please speak with some of the communities that are already feeling the side effects of this industry. Fracking leaves behind uncontrollable pollution. This pollution adds to the already poisoned air. It has negative effects on every living being. These companies can not control the messes they create and eventually the tax payers pay as we always do. But before that happens our planet and its inhabitants suffer. The irresponsible actions of these companies need to be laid on the table and carefully examined. I do not believe the BS these companies spew because their bottom line is making money no matter what the outcome is.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking pollutes water, air and communities. Even worse, burning fracked fossil fuels contributes to our climate challenge. We need to leave dirty conventional fuels in the ground, period....and put all of our efforts into developing clean fuel supplies. We have the technology, lets find the political will and the economic incentives. NO FRACKING. NO EXPORT OF FRACKED GAS.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann Meisel

RE: 2012 LNG Export Study

To Whom it May Concern:

Let's get real. World culture is about to go through major shifts that will dramatically alter the economic landscape. The first is the dramatic reduction in the cost of solar energy collection devices. They will soon provide cheaper energy than coal. That means that all electrical energy from coal and natural gas will become obsolete, except for minimal natural gas at night. The second is the stark reality of global heating, mainly caused by human activity. So burning less carbon fuels is an imperative, along with halting pollution from the mining and processing of such fuels. Fracking, then, is actually unnecessary and counterproductive. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Eric Thompson

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

John Tomkinson

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. The priority should be to end fracking's exemptions from the Clean Water Act, the Superfund Act, the National Environmental Policy Act, the Safe Drinking Water Act, and federal right-to-know laws that would otherwise require reports under the EPA Toxics Release Inventory. Until then, all applications to export fracked gas should be rejected.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Kathy Recchi

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Bill Bogacki

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thelma spotten

To Whom it May Concern:

Totally opposed to this! For the smallish bit of gas that is extracted - the ground is torn up, toxic chemicals are injected at deep levels that reach aquifers and wells, and the process itself oftentimes feels like an earthquake to neighboring homes/towns. There is no way you can justify this environmental offset! The way to be free of foreign oil isn't to damage Mother Earth(!)for Chrissakes! It is to demand that car manufacturers make only hybrids or better, that folks use solar or wind or gravity as a source of electriciry! This is so basic. Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Ann Gilbert
14000 Se 17th Pl., #J1

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Allowing the export of fracked natural would be a step backward. We need to focus on clean energy.

Sincerely,

Shanti Beard

RE: 2012 LNG Export Study

To Whom it May Concern:

Exporting natural gas would do nothing to make our country energy independent—in fact, it would just deplete our resources as fast as possible. 100 years, 200 years, is nothing in the life of our country. Isn't somebody thinking about the future...our children and grandchildren? In fact, it would be treasonous to purposely deplete our natural gas resources and thus weaken our economy and our defenses, wouldn't it? Fracking is a also toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. I urge you to stand up to the fossil fuel industry, which doesn't care about the future of our country, and deny all applications to export natural gas.

Sincerely,

Linda Lindsey

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Sue Strother

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Patricia Brooks
1910 N Superior Street
Appleton, WI 54911

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Tom Maendle

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Vicki Shulof

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Thomas Perrette

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. As a resident of east Texas directly in the path of the Keystone XL pipeline-the southern section granted fast track approval- I am already seeing first hand the destruction unleashed by reckless energy expansion on our own soil. The destruction is literal in the miles and miles of cleared land, forest and riparian habitats disrupted forever; but the destruction is also cultural and social. There is no excuse for the off-duty police hired by Transcanada that pepper sprayed a 75 year old woman involved in peaceful protest; how should we feel when those hired or elected to protect our community are bought and turned against us in the exercise of our 1st amendment rights? We don't need more pipelines. We don't need more export facilities. We need a coherent energy plan that actually focuses on phasing out polluting and toxic sources of energy and supports renewable, clean energy.

Sincerely,

Daniel Riser-Espinoza

I do NOT believe fracking is safe as currently done (with secrecy about what is used!). Selling gas lines the pockets of the rich and boosts the economy with jobs and at what price? It could very well destroy our water supply...how long can we live without that? This is wrong for the environment...it's NOT clean energy! Stop allowing them to pump toxic chemicals underground and cause earthquakes! This is a betrayal!

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking has proven to be a toxic threat to American communities and the climate. Recent research summarizes that fracking emissions may be worse for the climate than coal. By giving the US fossil fuel industry access to huge foreign markets by allowing fracked gas exports there would be a dramatic increase of demand for fracking in the United States. In addition the process to export it produces even more CO2 released into the US atmosphere. I ask that you follow the lead of President Obama, who spoke of such environmental concerns in his Inaugural speech, and stand up to the fossil fuel industry. Deny all applications to export natural gas.

Sincerely,

Margaret Ennis

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas.

Sincerely,

Chris Sheppard

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. There is nothing safe about fracking; it is pollution on a colossal scale. The oil and gas industry needs to be held to the federal clean water act, which they are not and that is just the beginning. C'mon Mr. President - we are the ones who voted for you. Now is the time to act on behalf of your constituents.

Sincerely,

RE: 2012 LNG Export Study

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Lisa Jackson, our EPA administrator who is voluntarily stepping down after Obama's inauguration, has been public enemy #1 to the Coal industry. As a Chemical engineer, Ms. Jackson has succeeded in implementing policies to reduce carbon emissions; most of which won't be evident until 2015. She has also validated that environmental pollutants are contributors to high rates of asthma, bronchitis, heart disease and cancer. I feel Ms. Jackson is one of the few policy makers that advocates for both the environment and public health. It disheartens me to see Ms. Jackson step down and I ask 'why'? Is it because she refuses to be financed by the oil and gas industry and their "economy first, screw the environment mentality"? Perhaps Ms. Jackson can become aligned with the anti-fracking communities across our nation that refuse to see our efforts for sustainable, green economies derailed by the present, unregulated, environmentally- exempt natural gas boon occurring nationwide under the premise of 'energy independence' when evidence shows the oil and gas industry is seeking to export and sell this resource at three times the cost to China, India et. al. I urge you to exercise policies that will BAN Hydraulic Fracking in America.

RE: 2012 LNG Export Study

To Whom it May Concern:

We can't frack, it's crazy. My family lives in NYC and has just survived an unprecedented weather event caused by too much atmospheric carbon. Nobody needs more fossil fuels, we need to teach ourselves to use less. There is no local or foreign climate, any fossil fuel we export will return to us in the form of unpredictable, damaging weather, and in the case of fracking, earthquakes. Don't support short-sighted money grabs, recognize our precarious position in human and environmental history and reject fracking and the export and consumption of all fossil fuels.

To Whom it May Concern:

Fracking is a toxic threat to American communities and the climate. Allowing fracked gas exports would dramatically increase the scale of and demand for fracking in the United States by giving the fossil fuel industry access to huge foreign markets. Stand up to the fossil fuel industry and deny all applications to export natural gas. Please help protect what's left of the earth. Sincerely, Sarah van Ouwkerk
