Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ken Weaver

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The United States has a terrific opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Michael Perry

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The US has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Given the current state of our economy, it would be extremely beneficial to the US economy to leverage this valuable resource. Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I strongly support the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Shannon Hoover

Dear Mr. Anderson,

Dear Mr. Anderson, The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks.

The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Michael henderek

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States energy industry has gone through a major technological change whose results can if managed wisely prove to have a dramatic positive impact on the future of our economy and way of life.

Specifically, the tremendous potential of our gas and liquids energy industries from offshore and particularly onshore fracking developments not only has the potential to make us energy independent, but also to generate hundreds of thousands of new jobs for our economy.

Included in that opportunity is for the government to fully support exports of current surplus natural gas to overseas markets where prices are multiples above their values here.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I can discern no rational reason why the US government would block what is a significant free trade issue. From an economics and balance of trade there is nothing but upside to the marketing of US generated LNG abroad. The opposition has the appearance of being entirely ideological in basis, seeking to curtail the economic viability of home grown natural gas resources in the US.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Sheila Alloway

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Gladys Olive

Comments on LNG Exports

Dear Mr. Anderson,

I support LNG exports for these reasons:

1. An open and transparent domestic energy market depends upon a free market, tied to the rest of the world's energy trading.
2. Trading our surplus LNG would give companies the price incentive to invest in American jobs and projects. If prices are artificially capped by export limitations, then investment money will go overseas.
3. Closed natural gas markets would benefit only a few chemical companies.

Thank you for this opportunity to provide comments.

Sincerely,

James Dixon

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a chance to benefit from the growth in domestic natural gas supply by expanding natural gas use domestically and by exporting liquefied natural gas (LNG). Free trade will benefit the U.S. by creating new jobs and increasing government revenues. These benefits apply to many industrial exports as well as natural gas itself.

I support the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy.

The NERA LNG export study provides a clear basis for the DOE to approve LNG exports.

Thank you for considering my views.

Sincerely,

John Chomiak

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Gary Fafard

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ann Strandberg

The NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. Restricting trade has been a tactic of war for eons; why would we choose to inflict on ourselves the same restrictions (trade imitations) that an enemy would try inflict on us during wartime?

I support the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. The study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Tom Eizember

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States currently has an opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG).

As an engineer who participated in the development of LNG liquification facilities in Libya for the supply of LNG to Italy, I can assure you that LNG suppliers are cautious and responsible and that LNG facilities represent a clean industry. The expansion of export facilities will hasten internal development of the US infrastructure necessary to expand the internal consumption of natural gas and reduce our dependence on foreign fuel.

I would support continued expansion of our LNG exports to accrue benefits to the US economy as determined by the NERA economic consultants.

Sincerely,

Fred Guber

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Robert Galloway

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Claire Cerutti

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Patricia Wineinger

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a lot of gas and opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). I believe exporting LNG will bring benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

FARIDEH MEHRDAD

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

Mr Anderson,

I spent many years in Russia working for the US government and US companies. At the time, both private and public entities worked to convince the Russians that a market approach and free trade for developing their energy resources, rather than resource nationalism, would bring brings benefits to their economy by expanding investment, creating new jobs, and increasing government revenues.

It is perhaps not surprising that, when it turns out we have new access to enormous energy resources here in our own country, that we should have our own version of that same internal debate. I am speaking of the comment period for the DOE's LNG exports study by NERA.

I am convinced the US economy will on the whole benefit from LNG exports.

There are powerful advantages to international relations as well. Given the US's history of supporting free trade I feel it would be hypocritical of the US government to take any other position than to let the market work to the maximum extent in finding the appropriate balance between export and domestic use. The energy trade that could develop with key allies (Japan comes to mind) could strengthen ties and free economies; and the climate benefits of increased gas usage could be used more widely.

I concur with the finding of net benefit from LNG export and encourage US DoE to approval of pending LNG export applications.

Sincerely,

Michael Allen

US LNG Exports - Comments on the NERA Study

Dear Mr. Anderson,

My name is Brian Downs and I am a 29 year old engineer in the oil and gas industry. My background is in chemical engineering with degrees from Auburn (BS) and MIT (MS). I believe that projects such as Sabine Pass LNG will improve the energy position and overall economy of the US significantly.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views. I would greatly appreciate an acknowledgement of your receipt of this letter.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Joseph Campagna

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The opportunity for the US to benefit from its natural gas reserves is one of the more important issues facing our country today. From becoming energy independent to addressing the balance of payments with other nations, development and the ability to export surplus supplies is essential. I strongly support the export of natural gas and urge the energy department to support this opportunity.

Sincerely,

James Turner

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Robert Parker

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my strong support for the DOE LNG exports study (NERA), which finds that America will benefit significantly from LNG exports. In line with our country's long economic tradition, we have yet another tremendous opportunity to utilize our rich resources to expand the natural gas base to a degree which supports BOTH domestic use and liquefied natural gas exports. The two are complimentary in the sense of new job creation, more investment, more domestic production, supporting/sustaining technology development (AT HOME), government revenue generation, and importantly, GDP growth (at a time where this overall "denominator" may be at risk of shrinking). Moreover, advanced technology at home fosters education. Over my long career (which includes LNG development), I have seen that advanced technology (like LNG) often serves as a "magnet" for higher education. Thus, LNG represents yet another opportunity to support science and engineering AT HOME, while enhancing our global reputation as the place where technology remains, "cutting edge". The LNG export study caught my attention as it reflects a "concrete" opportunity for our country. Let's move our country forward with this important development. And thanks for listening!

Sincerely,

Stephen Remmert

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ryan Sistrunk

My thoughts on the NERA Study on LNG Exports

Dear Mr. Anderson,

The U.S. has a great opportunity to add value to our economy by using the using the huge domestic natural gas supplies that has come primarily from the new technology used to extract gas that is trapped in deep shales and other tight gas source rocks. It now looks to be pretty clear that there is more than enough natural gas from these sources to provide gas supply for domestic needs and for natural gas exports in the form of liquefied natural gas (LNG).

LNG exports will open new opportunities for free trade, bringing benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits are wide open to the nation's export of other products such as automobiles, chemical products, agricultural products, etc. - and there is no reason they wouldn't be applicable to natural gas exports, as well. We should not take a protectionist attitude toward our exports of natural gas ... we have a long history of encouraging global trade (both imports and exports). The U.S. should have an opportunity to compete with other gas exporting countries like Australia, Russia and Canada for markets in countries that don't have adequate domestic gas supplies. The cost of an LNG export project is high and the destination markets are limited so, while many projects are asking DOE for approval to export, it is clear that many of these projects will not happen ... but market forces should determine which ones come to fruition, not some government regulator trying to read the tea leaves.

The protectionist views for natural gas exports being espoused by Dow and some other chemical and municipal gas companies make no sense to me. It comes across as if they don't want to have to compete. They are saying we should keep natural gas produced in the US just for us ... hopefully to give chemical product producers like them a competitive advantage. But they want to be able to export their own products ... it seems like they are talking out of both sides of their mouths. If the size of the natural gas resource in the US are as robust as is believed ... then these companies should have a built in competitive advantage for their products because their plants are here where the gas is located ... vs. other chemical manufacturers that have to have gas imported via expensive liquefaction plants and ships. It is a struggle to see how anyone takes their weak arguments serious.

The NERA study adequately supports my belief that the export of natural gas in the form of LNG will be good for the US ... in all cases in the study, the net benefits to the US is good. The NERA models lay out the various scenarios well ... the sideboards are clear ... the results are clear.

As I understand the statutory standard DOE has to meet in approving a request to export natural gas to a non-Free Trade Agreement country, the Natural Gas Act language provides that DOE should approve export requests unless there is a well documented showing of some kind made by opponents that the export is not in the public interest. The "public interest" is sometimes difficult to define, but so far I don't believe any such showing by opponents has been made ... assuming they have the burden of proof, I don't think the case has been made. The DOE has gone above and beyond what the law requires of them by even commissioning the NERA Macroeconomic study, and the result clearly shows that exports are good for the nation ... and clearly are "not adverse to the public interest".

I grew up in eastern Texas and still have land there. I have witnessed the economic activity over the last 10 years that was spurred by the gas producing companies as they moved to develop the Haynesville Shale and other formations in the region ... and how the development has slowed as more gas has been brought to market than the market needs, causing a great slow down in development activity of the dry gas in the area. If gas prices are able to rebound to profitable levels I believe the economic activity will pick up again ... the gas is there, but it will not be developed unless the country's demand pulls prices to a level that is profitable for a prudent producer to pursue it. Much of the pipeline and processing infrastructure to move this eastern Texas gas to market has been put in place, but the price signals must be sufficient to pull the gas to market. As I've already stated, I believe the size of the gas reserves are big. In past times the government tried to set prices for interstate gas supplies, creating many unintended consequences and artificial supply shortages ... to a roller coaster subsequent impact of over-supply appearance as the government allowed higher regulated prices under NGPA pricing. If the free market is allowed to work, I believe there is plenty of natural gas supply in the US that can be produced prudently ... to serve domestic needs (including more gas fired power generation and gas/LNG for automobiles and trucks) as well as exports to foreign countries. We are a trading nation ... we should not try to become isolationist or protectionist in this regard.

The NERA LNG export study provides a clear basis for the DOE to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

John W. Poe

LNG Exports

Dear Mr. Anderson,

We have an opportunity to benefit from the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting surplus natural gas in the form of liquefied natural gas (LNG). This will improve the U.S. economy by expanding investment, creating new jobs, and increasing government revenues.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports.

I request DOE move forward in approving pending LNG export applications.

Thank you.

Sincerely,

Bill Deppe

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Stan Strong

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. Supportive Comments on the NERA Study re LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The approval of LNG exports, and facilities, will create short term construction employment in a section of the workforce that truly requires stimulation as well as long term, private sector employment opportunities in high paying positions, operating and maintaining the export facilities. Additionally, these export facilities will add to the taxable property base in areas and communities where facilities are built or expanded. These benefits are tangible and measurable.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

LNG Exports and the NERA Study

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth of its domestic natural gas supply by expanding domestic use and by exporting liquefied natural gas (LNG). Expanding free trade brings benefits to the U.S. economy by increasing investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's existing exports of cars, agricultural products, chemicals, and more -- and would hold true for natural gas, as well.

Not surprisingly, the recently released study of LNG exports by NERA Economic Consultants resoundingly confirms this. That comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in every scenario, LNG exports yielded positive gains for our economy, with benefits increasing as the volume of exports increased.

Sadly, there are organization that, on a badly misguided and misleading basis, suggest we should not export natural gas. I find it amazing that people who otherwise recognize and cheer for U.S. businesses able to efficiently produce things needed elsewhere -- and generate benefits to the U.S. economy by producing and exporting those things -- claim that natural gas is somehow different and should effectively be hoarded here instead. In addition, if producers didn't have the opportunity to export, they would cut back on their otherwise-expected production volumes -- no point in spending money to produce more than they could sell -- so the artificially low domestic price claimed by the critics would evaporate anyway. The market is global; one cannot "trick" his way to artificially low domestic prices by withholding supply.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications. That there is even a need to request government approval to initiate exports seems to me a strange and wasteful process -- one I believe should have been unnecessary. That said, I hope you will promptly proceed with all needed approvals and allow the country to begin realizing the associated benefits.

Thank you for receiving and considering this input.

Sincerely,

Thomas Altman

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

William Valentine

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Deborah Taule

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Cynthia White

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Mark Xu

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Earl Himel

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Antonio Gonzalez

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

In my personal opinion, restricting LNG export is 1) wrong-headed and 2) unfair.

1) in addition to the points below*, natural market forces would diminish supply to offset any expected domestic cost benefit.

2) in the absence of environmental risk, vital national interest or restraint of trade issues, federal and state governments should not institute policies that favor one industry segment over another.

*Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Lynda Becka

Protect US Energy - Move Slowly on LNG Exports

Dear Mr. Anderson,

There is currently a lot of pressure from the US gas industry to expand exportation of US-sourced LNG to other countries. This export is a step that could help balance the US trade unbalance with other countries; however, I believe it is important to move slowly and with much due consideration before embarking on an active program of exporting this valuable US domestic energy source.

For too many decades, the US has been on the brink of being held hostage by powerful oil producing countries and oil cartels. This undue influence has colored much of US foreign policy â not always to the good of overall US global interests in other areas.

The US should retain as much of this domestic energy source as possible to maintain an energy independence for centuries to come. Never again should the US be influenced by foreign energy producers due to our dependence on foreign energy.

Please, for the good of our country and the welfare of our grandchildren, move very slowly in evaluating what, if any, portion of this valuable resource should be sent overseas to countries that take US jobs and markets through their use of cheap labor and OUR natural gas.

Thank you for considering my views.

Sincerely,

John Welsh

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The U.S. should capitalize on the rapid growth in domestic natural gas by expanding its use domestically and by exporting LNG which would open new avenues of free trade, investments, jobs, and tax revenues. So I support the DOE's LNG exports study by NERA. The study concluded that LNG exports yielded positive gains for our economy, and I believe that, based on the the NERA LNG export study, the DOE must approve LNG export applications. Thank you for considering my view.

Sincerely,

Jon Butcher

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Myra Goodwin

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The conclusions of the NERA study are hardly surprising; in fact, the economic analysis is very straightforward. It is for this reason that I am very troubled by those, particularly Dow Chemical, who oppose the export of natural gas in order to capitalize on a domestic surplus and the resulting low prices. Dow Chemical and the others who oppose the study's conclusions would like to capture the benefit of low natural gas prices to improve their own competitive position, and certainly would never agree to limit the export of their output. Free trade is the basis of a healthy world economy and the U.S.A. always speaks out when foreign countries limit the export of their natural resources (i.e., China and rare earth metals). It would be exceedingly hypocritical for the U.S.A. to limit the export of natural gas as a means to illegally (WTO) subsidize domestic manufacturers so THEY can better compete in the world economy.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Thomas Halsey

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Tim Collins

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Stephen Perry

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study. While I don't think there is any doubt LNG exports would yield positive gains for our economy, I think you must step back and look at the bigger picture on our energy supplies.

Access to oil and gas around the world is becoming harder and harder to come by. No one can argue that point. China is willing to buy this access at any cost. Wars have been fought for this access, Japan attacked the U.S. when it felt it's access was endangered. Until renewables and other forms of energy make bigger inroads into our local energy market, hydrocarbons are King. Please don't give up this long term strategic advantage for short term economic gains. It could have an impact on our national security if world supplies were ever severely interrupted, or proved inadequate in the growth of the future.

Thank you for considering my views.

Sincerely,

Glen Bilderback

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Thomas Walters

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Mark Willis

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

James Hanna

Oil has been traded on a world-wide basis for many years and the marketplace has decided it's value, this is exactly the direction gas should go. There is a huge supply of gas resources in the world and once all import and export restrictions are eliminated can it's true price be determined. This is the foundation of capitalism and has worked far better than Government controls and allocations. I can live in Venezuela if I wanted that!

Thank you for considering my views.

Sincerely,

Walter Merz

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

David Fox

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

D. Ronald Briggs

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Michael Grzyb

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Rick Schroedter

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Elizabeth Walton

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Aaron Surber

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ronald Stang

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The newly discovered natural gas gives us more than we need. I am entirely in favor of granting permits to export this product.

I hear complaints about our low exports, so I should think this would be a no-brainer.

This would not only improve our trade balance, but give badly-needed jobs to many workers.

Sincerely,

Muriel Horacek

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Gary Mergotti

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I believe that prudent but aggressive development of US natural gas resources is critically important to the economic prosperity of the US. Exports of natural gas as LNG to overseas markets where the demand and price are higher than in the US will provide us with jobs, improved balance of trade and economic growth.

Studies, as well as the recent history of growth in natural gas production have clearly indicated that US production capacity will support such exports, without reducing domestic availability.

Authorizing LNG exports is a no-brainer.

Thank you for considering my views.

Sincerely,

Terry Gardner

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Lynda Parker

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

William Wrenn

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well. Imposing stringent limitations on the export of LNG would result in discouraging further exploration for and production of natural gas, and thus damage our economy by destroying jobs.

I support the DOE's LNG exports study by NERA and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports will yield positive gains for our economy. The study found that the benefits from exporting LNG will increase as exports increase.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Edmunds Travis

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Charlie Lin

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I am writing to express my support of the conclusions of the NERA study regarding LNG exports. We seriously need to use all avenues to improve the economy of the United States and get us past the 5-6 years of substandard economic performance.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States can generate many economic benefits by producing our abundant natural gas reserves and exporting some of this gas in liquid form (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues.

I am hereby expressing my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

It seems to me the NERA LNG export study provides a clear basis for the U.S. Department of Energy to approve pending LNG export applications. Mr. Anderson, it's time to move on this...the American people and our relations with other nations need this now.

Thank you for considering my views.

Sincerely,

George McGonigle

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Kathleen Radulovich

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Dwight Richard

LNG Exports

Dear Mr. Anderson,

Please allow the US to export LNG. I trust the NERA when they project that there will be plenty of natural gas for the future. As long as US energy independence is protected, there should be no reason not to allow foreign revenue to help boost our flagging economy.

Thank you for considering my views.

Sincerely,

Marianne Duncanson

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

David Mason

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

James McDermott

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy.

However, world wide demand for this exported gas will no doubt lead to an increase in the price of natural gas in the United States. In my opinion, it is important to set a limit on the amount of gas that can be exported so as not to lose the advantage to the United States for low cost natural gas supply to heat homes and businesses and to supply electric power companies and industries in the United States. I would recommend that the DOE establish a formula to calculate allowable gas export based on a price cap that assures continued low cost natural gas to US consumers. Obviously this will have to consider the expected growth of natural gas use in the United States.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications. Just be sure that we in the United States do not lose the advantage that low cost natural gas can bring to improve our economy.

Thank you for considering my views.

Sincerely,

Joseph T Geiger

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Harmon ODell

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has finally found a tremendous supply of clean burning natural gas that could last this country for quite some time. At one time we exported oil as we had "vast reserves" I'm sure the reasoning to export was very similar to the ones being made now for LNG. We no longer have the luxury of vast reserves and are instead dependent on other countries, many hostile to us, to meet our oil needs. Please do not let us squander the bounty we now have. This is not a planet of oil with 2 feet of topsoil on it.

I would like to express my opposition for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. Although I believe the results are valid, I also believe there is money to be made domestically as well. Cheap energy is what made this country great. Cheap energy will allow Americans to spend money in the American economy. Please think past the quick dollar and act to ensure the energy needs of our children and their children will be met.

Thank you for considering my views.

Sincerely,

Daniel Behringer

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Sara Ortwein

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

The only argument against LNG exports is to benefit specific industries which are NG users. This inherently reduces the value of the export because it is favoring a smaller segment of the economy. For example Aluminum smelters would benefit from lower NG prices and become more competitive globally. But then an manufacturer that uses Aluminum would say no don't export that AL because I want cheaper material to benefit my business.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Bill Bray

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

roger koerner

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ricky Ruffin

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Richard Nalevanko

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Pat Montgomery

LNG Exports

Dear Mr. Anderson,

The US has a great opportunity to capitalize on the growth in domestic natural gas supplies by expanding natural gas use domestically and by exporting natural gas in the form of LNG. Opening up avenues of free trade brings benefits to the US economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I support the DOE's LNG exports study by NERA, and its findings that we will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of US natural gas supply and demand outlooks. The study concluded that LNG exports yield positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The LNG export study provides a clear basis for the Department of Energy to move forward in approving pending LNG export applications.

Thank you.

Sincerely,

Joe Horne

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Furthermore, a failure for the USA to support allowing export of our energy resources would be extremely hypocritical given our advocacy of free trade worldwide, and the desire to import other forms of energy from other countries without undue regulation or taxation.

Thank you for considering my views.

Sincerely,

Alan Braaten

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Richard Martinez

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

As both a gas royalty owner and employee of an integrated oil company, I support the potential export of LNG. If the market supports this economically, it is the best option for America.

Thank you for considering my views.

Sincerely,

JAMES TURNER

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Joan Carmody

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

Dear Sir

We, as a country, need to support free trade absolutely. There are no economists that think otherwise. It would be against our own interests if we did not allow the export of LNG. I hope your recommendation and decision is for the benefit of all and not to favor a few companies that think they will profit if only we make sure that natural gas is as cheap as possible in the U.S.

Thank you for considering my views.

Sincerely,

Charles Brandt

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Indeed, the energy sector in our country is one of the strongest areas, and can be even stronger if given the chance. Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Stephen Macht

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I live in Houston, Texas. Many of my friends and neighbors work in the oil and gas industry. It appears the United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well. Heaven knows we sure could use a few more people working in the US to help to get us out of the financial situation we are in.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Harold Opperman

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Dan Finger

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

As our country continues to struggle economically, I believe that the proposal to export natural gas benefits not only the U.S. financially, but also provides a source of energy cleaner than the export & burning of coal. I see the proposed approach as a sound way to address both our economic recovery and human-influenced climate alteration.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues.
