The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Andrew Bricker

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

It is disappointing to me that a few select individuals in Congress hope to derail this opportunity in the misguided belief that they can keep natural gas prices low (even though this will result in less benefits for Americans as a whole). They do not seem to understand that free market prices will provide the best opportunity to provide our industries with adequate, cost-effective supplies, provide tax payments and royalties to states and individuals, increase employment with high paying jobs and improve our balance of payments.

Thank you for considering my views.

Sincerely,

Jeff Seekatz

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Peter Daggett

Comments on LNG Exports

Dear Mr. Anderson,

I would like to encourage the DOE to approve exports of natural gas. We have a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). I believe there are a few vested interests that one to keep prices low for their own benefit to the detriment of overall growth and job production in this country which is why I object to their position to limit exports.

I would like to express my support for the DOE's LNG exports study by NERA. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. The study also found that the benefits increase as exports expand which I agree with.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for time and consideration.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

James Sanford

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting it. Opening up new avenues of free trade brings benefits by finding the highest and best use for the new supplies...or a combination of both

Thank you for considering my views.

Sincerely,

Jack (John) Merkl

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Kevin Youngblood

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Patrick Hughes

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Linda Schmaus

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Lee Teasley

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The export of LNG, like our exports of food and technology, will also serve a strong political end in our ability to provide opportunity to energy short neighbors and allies. In the 1960's I spent three years supervising the installation of an LNG receiving facility and distribution system for the greater Barcelona area of Spain. As a direct result of this new energy source, Barcelona has more than doubled in size and prosperity, culminating in actually rebuilding the city waterfront and hosting the Olympics. The unique ability of an accessible supply of this near perfect energy source, can be the key to uplifting the lives of those not currently so gifted.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Sarah Myers

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Sowmi Krishnamurthy

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Cheryl Mason

Mr. Anderson, the items above are a form letter. This section is not. The USA has immense natural gas resources that are sufficient for both domestic consumption and export. Resource owners of these resources exist throughout the country. They and the taxing authorities will benefit from the increased value of the gas. The people involved in designing, constructing, and operating the facilities and their families will also benefit. Thanks for seeking input from your fellow Americans.

Sincerely,

Benjamin Witt

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Ryan Matthews

The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

I also realize the currently we don't have the infrastructure here in the US to utilize the current LNG production levels. If we shrink the market by refusing to have a place to sell what is currently being produced, jobs will be lost as energy companies are close facilities due to lack of profitability.

Thank you for considering my views.

Sincerely,

Casey Jolley

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Carmen Horton

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Harley Benner

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Also, consider how most other countries SUBSIDIZE their energy businesses, especially oil and gas businesses. America cannot afford to be left with a higher cost disadvantage to the rest of the world, and is now in a position to share its resource wealth by exporting LNG, and more refined oil and gas products, which are lower in CO₂, and lower in other pollutants such as sulfur, and lower in poisonous and heavy metals found in coal use in energy production. All these things are beneficial to the developed and developing world!

Thank you for considering my views.

Sincerely,

Russell Mueller

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Izhak Grinbaum

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Michael James

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Donna McCray

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has numerous opportunities to capitalize on the rapid growth in domestic natural gas supply. In addition to expanding the use of natural gas for cheap, clean domestic energy and chemical feedstocks, the country can prosper by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. The basis for supporting the export of manufactured goods, agricultural products and chemicals supports the export of natural gas as well.

The DOE's LNG exports study by NERA shows that America will benefit from LNG exports. After examining all sectors of the economy and incorporating a wide range of possible U.S. natural gas supply and demand outlooks, the study concluded that LNG exports would create gains for our economy — gains that we clearly need at this time.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Robert Foley

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Gerald French

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Charles Beach

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Please base your decision on the known facts and do what is best for the country as a whole.

Thank you for considering my views.

Sincerely,

Jason Hrcir

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Jackson Rewey

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The US should capitalize on the growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas, which can be done in the form of liquefied natural gas. Opening up free trade helps the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals in addition to natural gas..

I strongly support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear reason for the U.S. Department of Energy to approve pending LNG export applications.

Thank you for considering my views.

Sincerely,

Floyd A. Smith

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Tim Bordelon

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Joseph Frederico

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Donna Ratcliffe

LNG Exports

Dear Mr. Anderson,

I am a resident of the Dallas area and have seen the economic benefits of increased natural gas production first hand. After years of dependency and imports, we have a world class opportunity in natural gas that will help all Americans and American companies compete globally while creating good paying jobs.

I support for the findings of DOE's LNG exports study and its fully agree that America will benefit from LNG exports and that the benefits increase as exports expand.

Thank you for considering my views.

Sincerely,

Michael Dolan

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Bob Rossen

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

William PReuss

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Peter McGillivray

Support LNG exports

Dear Mr. Anderson,

I am a petroleum engineer and support free trade in energy supplies. I have seen in the gas fields of East Texas the economic impact of natural gas production. Please support and approve the export of LNG from environmentally sound LNG export projects. In particular, I support the export of natural gas to our free market friends in Europe, Latin America, Japan, and South Korea. These nations have traded with us for many years to much mutual benefit. Not trading LNG with them would send the wrong message.

Sincerely,

Owen Hehmeyer

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

William Browning

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Denise Preston

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to improve its economy and help balance export payments. I believe government to do everything in its power to encourage the safe production and export of LNG.

If there is a global warming problem caused by carbondioxide emissions the use of LNG greatly help the situation especially on a worldwide basis.

Thank you for considering my opinion.

Sincerely,

Frank Lundy

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Brian Flannery

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

We need to increase our internal use of domestically produced natural gas, so that we can reduce our dependence on imported hydrocarbons. However, until we can convert industry to use more natural gas in place of oil, we can also greatly benefit from exporting. The U.S. has a huge trade imbalance on the global market; therefore, exporting LNGs is also a good use of the current excess natural gas.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Bobbie Schillo

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Danny Bass

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Robert Ortlieb

Rules against free trade create costs and inefficiencies. In this case, as in most others, the restriction benefits a few special interests at the expense of the rest of the country. Thank you for considering my views.

Sincerely,

Richard Mifflin

Natural GAs development

Dear Mr. Anderson,

Mr. Anderson, I believe we should waste no time developing our Natural Gas resources.

Yes there should be regulations in place to minimize impact on the environment, particularly water resources.

Responsible companies will adhere to effective regulations. Irresponsible companies should not be granted development rights.

Also, this is America correct? Companies have the RIGHT to export plentiful NG. Facilities should be created to facilitate this right. America needs Jobs. Government needs revenue.

This economy NEEDS exports.

I'm tired of WAR to gain "energy security" America cannot afford constant conflict. Too many americans and foreign nationals in arab lands have died over Oil. Our current presence and military actions in the Middle EAst does little good for USA image in the rest of the world.

Move NG forward for American prosperity.

Sincerely,

Stephen Russell

Comments Study on LNG Exports

Dear Mr. Anderson,

Our country has a wonderful opportunity to take advantage of the tremendous supply of natural gas we have. These resources give us great opportunity to create jobs and expand our exports which has been an important goal of the the president.

A recent in depth study by the NERA support these views. I urge that the Department of Energy approve pending LNG export applications.

Sincerely,

Orville Mills

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

To reduce our national debt, it makes sense to immediately increase domestic natural gas production for both our own use and sell additional natural gas on the world market rather than import crude oil products. Natural gas is believed to have long-term reserves in the United States, and more natural gas fields are being located.

Present natural gas cost in US is nominally \$3 per thermie. This natural gas heat content is equivalent to an \$18 per barrel oil. That's much less than world price for a barrel of crude. The US can sell natural gas on the world market for perhaps \$15 - 20 per thermie which is the equivalent to \$90-120 value of a barrel of oil

The US can realize significant revenue while not paying for imported crude oil which contributes to our national debt.

Thank you for considering my views.

Sincerely,

Paul Eichamer

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

NERA Study on LNG Exports - Comments

Dear Mr. Anderson,

Greenhouse gasses are global and do not respect national boundaries. Therefore, exporting natural gasses will not only benefit our economy it will benefit global efforts to mitigate global warming.

Our indigenous resources and the evolution of proven technologies gives the United States has a tremendous opportunity to benefit its workers, its economy and the environment. Taking advantage of the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG) can be a game changer.

Opening new avenues of free trade would brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

peter schmergel

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

RANDY PERKEY

The NERA Study: LNG Exports

Dear Mr. Anderson,

I am a private citizen over the age of retirement. I have many years of experience in business and energy. I have participated in good times and bad times in the economic sense. My kids tell me I have wisdom based on my many years of experience. I would like to share some of it with you.

Our country works best when the government makes as few fiscal-business rules as possible. I recall when the Nixon administration initiated the regulation natural gas prices to "Protect the consumer." There is no doubt that this action had a devastating effect on the use of this natural resource. Because the price of natural gas could not adjust to the natural forces of supply and demand, our country suffered. Our natural gas supplies dwindled drastically low because there was little incentive to explore for this commodity. Later, President Carter had to make rules to discourage the use of natural gas. It took many tens of years to overcome this problem. We are finally there with the advent of new sources like gas from coal, gas from tight formations, and new drilling-fracturing techniques in shale rock. Now that there is an excess of supply of natural gas:

We could definitely offset our export-import imbalance through exports.

We could use natural gas as fuel for long haul trucking, eliminating oil imports.

Industry that uses natural gas as a feedstock is coming back.

Home heating costs have been substantially lowered.

The amount of CO₂ annually emitted to the atmosphere from USA sources has decreased to levels not seen since the 1990s. The reason is natural gas used to generate electricity emits substantially less CO₂ than coal. Because of this, our electrical generation has now approximately balanced between the use of coal (once over 50% of electrical generation) and natural gas.

Here are the main reasons I believe we should allow the export of substantial quantities of natural gas.

1. Our reserves of this viable product will continue to be substantial because the price of this product will find a sustainable level. If we don't allow significant exports, prices will stagnate and reserves will again decline.
 2. Our balance of export payments will finally be improved after many years of negativity.
 3. The amount of CO₂ emitted to the atmosphere will decrease worldwide because natural gas will displace the use of coal and diesel as the main electrical generating medium.
 4. Tens of thousands of USA workers will be employed to search for, prepare and deliver this product.
 5. More viable natural gas will offset energy exports by countries who hate America and use funds from vast energy resources to attack our freedom and the freedom of others throughout the world.
- Please contact me if I may be permitted to share my ideas with interested parties.

Sincerely,

Michael Pinnell

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Capt. Jack T. Stillman

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

America needs to develop its natural gas industry for domestic and export markets, and there is added benefit to the US and the world in having natural gas supplant coal, oil, and less environmentally acceptable fuels.

Thank you for considering my views.

Sincerely,

Robert Prioleau

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Brooke Schedler

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand. It also seems obvious to me that exporting some gas can improve the price of gas somewhat and keep incentives up for drilling activity. The domestic prices for gas have been so minimal in recent years that many companies have essentially disengaged themselves from continuing exploration efforts.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Subramanian Manickam

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

It should not even be an argument among US citizens and the leadership of this nation - when it comes to making sales of US products (in this case natural gas) to outside nations. We can not let the special and limited interests define our economic future. Let the US natural gas go to buyers who are willing to pay the price to meet their needs. Thus:

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Gary Engling

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

In addition, there's a fundamental property rights issue at stake. Why should anyone's property be limited as to their ownership rights? We don't tell farmers they can't sell their corn, we don't tell Hollywood they can't license their movies overseas, we don't tell Detroit you can't export their cars, why would natural gas be treated differently?

Thank you for considering my views.

Sincerely,

Mark Dolecki

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Min Chang

Great Opportunity for the United States Citizens - NERA Study on LNG Exports

Dear Mr. Anderson,

Hello John,

Yes I am an employee of ExxonMobil and LNG Exports would have a beneficial impact for the company. But what I did want to share is my experiences as a US Citizen working for one of the last US oil companies over the last 34 years.

When I entered Mobil in 1978, we were an asset rich company. I worked in Exton Pa, Woodhaven Mi, Dearborn, Mi, Cicero, IL, Kansas City, KS, Shaumburg, IL and Fairfax VA. Today all of those assets are closed or nearly idled with the exception of Fairfax Virginia which will be closed in 2014 or 2015. Unfortunately, part of my job has been assisting projects that are divesting most of the US Downstream assets these last 10 years. Of course, divestment is the right decision financially as ExxonMobil prioritizes the Upstream business. And of course the divestments have gone to US regional distributors and wholesalers, who we continue to partner with.

But here is the point, one of the reasons I believe that I had a long and successful career was this exposure to operational work at these sites in the early and learning stages of my career. At 60 years of age, I was looking forward to passing my responsibilities on to another US citizen at time of my retirement. This will not happen for me. My work will go to a foreign national who has been afforded some of the same opportunities I had internationally. Yes, there are a few US citizens in this group, but the base has widened. While a separate subject, it is fair to point out the economics (tax) of US citizen deployment overseas is a disadvantage versus European, South American or Asia Pacific counterparts. So many US graduates with the college credentials and comparable skills will need to excell not equal those foreign candidates for selection.

My belief .. THIS WOULD NOT BE the "long term employment opportunity" situation for US citizens IF US Oil companies get the opportunity to expand LNG Exports. The assets and training and skill development opportunities would be local and provide US Citizens with early path in and later path to compete.

As a father of 7, grandfather to 9, I can tell you without bias that job opportunities ARE NOT what they were at the time of my entry into Mobil. More importantly, belief that a service economy is best for the US was a good ideas in the 80-90s but with expanded IT capabilities of today where US citizen must compete with lower cost international skills.. is not. PLEASE BE a LEADER and bring some manufacturing and operational jobs back home. Yes GREEN is nice but I do not intend on boarding a solar powered airplane soon.

Thank you for listening John. You are welcome to call me in the attached details if my thoughts are of interest or need clarity.

Yours Truly

Steve (Steve) E. Grove

Other supporting information....

Other Information..

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications. The U.S. needs to stop depending on foreign energy sources and bring jobs back into this country.

Thank you for considering my views.

Sincerely,

Leslie Pennington

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Greg Latcham

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Steve McFadden

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

As a retired mining engineer, I have a great appreciation for the natural resources with which the United States has been endowed. These resources have been a key element in enabling us to prosper, not only as an economic benefit when used within the US, but also when used as an export product.

The United States now has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Martha Walker

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Parag Gupte

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Rowena G White

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand. All forms of energy supplies are global commodities, priced globally, and ultimately distributed globally. For the United States to take a different position is pure folly, and catering to the paranoid pressure of a few special interest groups who are not educated on the global markets.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Comments on LNG Exports

Dear Mr. Anderson,

We have a growing opportunity to export natural gas as liquefied natural gas (LNG). This has been done successfully for years between Libya and Italy/Spain and could be so for the U.S.. The benefits to the U.S. economy include expanded investment, new jobs, and increasing government revenues.

I support the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. Our balance of trade should shift favorably as well.

The NERA LNG export study gives a clear basis for the U.S. Department of Energy to move forward and approve LNG export applications.

Thank you.

Sincerely,

Hugh Huffman

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Richard Fowler

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Judy Wright

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

The large amount of gas is larger than the US can use and is keeping gas prices below a threshold that keeps drilling and production strong. If we do not allow export of LNG jobs, will be lost, royalties to land owners will be lost, government revenues will be lost, and economic growth will be at risk.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

Mr. Anderson, We have a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). This will create new jobs, and increase government revenues. It's a win-win for everyone. Just like exporting cars, agricultural products and chemicals, exporting natural gas will benefit us all.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear reason for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Bryce Jones

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Steve Filemyr

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

I Support Findings by the NERA Study on LNG Exports

Dear Mr. Anderson,

Since the United State has abundance of cheap natural gas, it makes sense to use it domestically as well as to export it. Both activities will create many needed domestic jobs.

The study by NERA, and its findings that America will benefit from LNG exports. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications. Please ignore political opponents who disregard the economic forecasts of benefits.

Thank you for considering my views.

Sincerely,

Sumol Padungchai

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I am a retiree from a major energy company and an avid supporter of the domestic industry. From the consumer side, I am happy with the inexpensive natural gas made possible by over development of these resources and given the current domestic market constraints. An obvious solution to the over supply is use as transportation fuel but this will take a long time to accomplish: in the meantime, there is under utilized development capacity that could provide much needed jobs and also support industry expansion and exports to help our trade balance. This abundant resource has the potential to revitalize our country and should be utilized to the fullest, both domestically and in trade.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

William Stafford

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

william borgsteadt

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

This will be my personal opinion not a form letter from others.

It my belief that the export of oil and gas throughout the world drives up the cost of our US gasoline and natural gas to the consumers. If we export a significant amount of oil and gas we then increase the demand pressure on the domestic oil and gas and the price here will become equal to the world market. I believe there should be some exports to support the oil and gas companies but not untill we drive the cost of the US oil and gas down to a reasonable level. We have always enjoyed gasoline prices at less than one half the cost seen in European countries and we should strive to keep it that way. That is one of the things that I believe gives the US a competitive edge in the world market.

Thank you for considering my views.

Sincerely,

Aubrey Dupree

The NERA Study: LNG Exports

Dear Mr. Anderson,

I am a private citizen over the age of retirement. I have many years of experience in business and energy. I have participated in good times and bad times in the economic sense. My kids tell me I have wisdom based on my many years of experience. I would like to share some of it with you.

Our country works best when the government makes as few fiscal-business rules as possible. I recall when the Nixon administration initiated the regulation natural gas prices to "Protect the consumer." There is no doubt that this action had a devastating effect on the use of this natural resource. Because the price of natural gas could not adjust to the natural forces of supply and demand, our country suffered. Our natural gas supplies dwindled drastically low because there was little incentive to explore for this commodity. Later, President Carter had to make rules to discourage the use of natural gas. It took many tens of years to overcome this problem. We are finally there with the advent of new sources like gas from coal, gas from tight formations, and new drilling-fracturing techniques in shale rock. Now that there is an excess of supply of natural gas:

We could definitely offset our export-import imbalance through exports.

We could use natural gas as fuel for long haul trucking, eliminating oil imports.

Industry that uses natural gas as a feedstock is coming back.

Home heating costs have been substantially lowered.

The amount of CO₂ annually emitted to the atmosphere from USA sources has decreased to levels not seen since the 1990s. The reason is natural gas used to generate electricity emits substantially less CO₂ than coal. Because of this, our electrical generation has now approximately balanced between the use of coal (once over 50% of electrical generation) and natural gas.

Here are the main reasons I believe we should allow the export of substantial quantities of natural gas.

1. Our reserves of this viable product will continue to be substantial because the price of this product will find a sustainable level. If we don't allow significant exports, prices will stagnate and reserves will again decline.
2. Our balance of export payments will finally be improved after many years of negativity.
3. The amount of CO₂ emitted to the atmosphere will decrease worldwide because natural gas will displace the use of coal and diesel as the main electrical generating medium.
4. Tens of thousands of USA workers will be employed to search for, prepare and deliver this product.
5. More viable natural gas will offset energy exports by countries who hate America and use funds from vast energy resources to attack our freedom and the freedom of others throughout the world.

Please contact me if I may be permitted to share my ideas with interested parties.

Sincerely,

Michael Pinnell

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Clint MacIntyre

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Stephen Cassiani

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

USA exporting LNG

Dear Mr. Anderson,

The USA is still a free enterprise nation as compared to most others. I support free enterprise and the USA. It makes sense to me for the USA to export LNG since we now have new and improved techniques for its extraction. It certainly will help or international balance of trade.

Thanks, for considering my opinion.

Sincerely,

Charles Lano

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

Dear Mr. Anderson,

I am writing to express my support for the study the DOE recently issued about exporting American LNG. I know that chemical companies have lobbied Congress and the President against this idea, but as a worker in the oil industry, I know how shortsighted that is. The supply of natural gas in unconventional resources in this country is vast, and once the price starts to rise even slightly, the production rate would quickly mount up to supply feedstock for chemicals as well as exports. Since the exported LNG can fetch \$9 per million BTU instead of \$2-4 here, it's crazy not to export it - since the supply in this country will immediately rise to make up for it, and those chemical companies will not lose their competitive edge.

I certainly hope every member of Congress and especially the President get copies of this report and use it to inform their votes on exporting LNG.

Thank you for considering my views.

Sincerely,

Scott Robinson

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Chris Gorman

These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Margaret Harper

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports which concluded that in all scenarios, LNG exports yielded positive gains for our economy and benefits increase as exports expand.

The U.S. Department of Energy should move forward in approving pending LNG export applications. The U.S. transition to major energy exports creates job, and at a time of uncertainty in the Middle East and North Africa redefines U.S. military commitments and is a key to our future as a Superpower.

Thank you for considering my views.

Sincerely,

Clifford Berntein

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

I would like to express my support for the export of LNG. This would be a significant and much needed boost to our economy. DOE experts have shown support this position in the NERA study.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. LNG Exports

Dear Mr. Anderson,

Allowing LNG exports will help jobs in the U.S., and will lower the global price of energy, which will reduce the windfall profits of foreign producers who subsidize terrorism. It is needed as much as we need approval of the Keystone pipeline.

Sincerely,

Richard Ruckstuhl

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Lisa Minghenelli

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Peter F. Healey

Export of LNG

Dear Mr. Anderson,

Export trade creates jobs and strengthens economies. Look at China, for example.

America must produce and export products to ensure our currency has value. We can not be an "internal services only" economy - we have to trade.

Due to technical advances made by private industry, LNG is available for trade, now and for the long term.

The DOE made similar conclusions in its market based analysis in an LNG exports study by NERA, which study was made in a more detailed manner.

Please consider my thoughts and support appropriate actions to facilitate, not hinder, LNG exports.

Sincerely,

Tom Pruitt

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

Comments on the NERA Study on LNG Exports

Dear Mr. Anderson,

Quote from the NERA LNG Export study:

"In all of these cases, benefits that come from [LNG] export expansion more than outweigh the losses from reduced capital and wage income to U.S. consumers, and hence LNG exports have net economic benefits in spite of higher domestic natural gas prices. This is exactly the outcome that economic theory describes when barriers to trade are removed."

Enough said - the NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

The United States has a tremendous opportunity to capitalize on the rapid growth in domestic natural gas supply by expanding natural gas use domestically and by exporting natural gas in the form of liquefied natural gas (LNG). Opening up new avenues of free trade brings benefits to the U.S. economy by expanding investment, creating new jobs, and increasing government revenues. These benefits apply to the nation's export of cars, agricultural products and chemicals - and would hold true for natural gas, as well.

I would like to express my support for the DOE's LNG exports study by NERA, and its findings that America will benefit from LNG exports. This comprehensive and rigorous study examined all sectors of the economy and incorporated a wide range of U.S. natural gas supply and demand outlooks. The study concluded that in all scenarios, LNG exports yielded positive gains for our economy. In fact, the study also found that the benefits increase as exports expand.

The NERA LNG export study provides a clear basis for the U.S. Department of Energy to move forward in approving pending LNG export applications.

Thank you for considering my views.

Sincerely,

Olivia Jenney
