

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tim Collins

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Is it true the DOE trusted a company with ties to the fossil fuel industry to conduct the study of whether hydrofracked gas should be exported? Surely, this is a joke!

Secretary Chu, I believe you come from UC Berkeley, as I do. Let us be real with one another. How can we, with future generations in mind all around the world, replace a kind of fossil fuel--coal--that pollutes the atmosphere and endangers the planet, with another--hydrofraced gas--that pollutes the water and endangers the very basis of life on earth?

Tell me it's a bad dream. Steer us away from the disaster we are heading into. No more fossil fuels of any kind -- not for energy, not for fertilizer, not for plastics!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Paterson

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Caroel Neary

---

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Christine Andrews

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Malorie Sneed

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sid Zeller

As the number of citizens opposed to fracking increases, and the number of court cases on fracking grows, this rush to permit the export of natural gas seems unwise. Measure all the costs. Measure the will of all the people, not just the will of special interests. And please keep the reality of climate change at the forefront of your thoughts as you redesign this study.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sandra Lindbergt

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Debbie Thorn

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The money from all the gas they could extract by fracking can NEVER make up for the criminal damage that gas will cause in several ways: 1) The chemicals they use to extract it from deep in the earth , near our water tables, will destroy our environment and contaminate our precious water table supplies for generations.It will also ruin and overuse water supplies that will then not be available in an area already suffering with water shortages, now and in the future. 2) The gas itself will be burned and increase the terrible damage to our planet and make it warm dangerously faster than even the scientists have previously predicted. 3) The subsidies to this industry are raping our ability to fully fund renewable and safe alternative energy sources and R&D. 4) Lastly, as we cling stupidly to a dying energy source which is killing us all, we are not adequately investing in the clean technologies we will later have to buy from the much smarter countries that have made the switch. Instead of exporting new , brilliant. innovative, clean technologies to the rest of the world, we will end up buying this from them, STILL DEPENDENT

UPON OTHER COUNTRIES FOR OUR ENERGY NEEDS. WE NEED TO WAKE UP AND TAKE A DIFFERENT, SMARTER PATH. Emphatically, Christmas Leubrie R.N.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anna Perry

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kylee Swigart

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jillian Forschner

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

WE NEED TO FIND WAYS TO DISCONTINUE THE USE OF FOSSIL FUELS, including natural gas. I saw first hand the the way the drillers/frackers man-handled the land owners in west-central Arkansas. They came in making many promises of low impact. They destroyed the roads, the loud, incessent sounds of the drilling processes were everywhere. There were numerable wells. It was not a pretty sight. WE ARE INTELLIGENT PEOPLE. WE NEED TO MOVE AWAY FROM FOSSIL FUELS. WE ARE COOKING THE PLANET AND SO MUCH OF THE PUSH IS FROM THE ADVANTAGES WE GIVE THE MEGA-OIL COMPANIES. WE NEED TO RE-THINK OUR ENERGY MANAGEMENT PLANS -- AND NOT GIVE IN TO THE OIL BIZNESS!! Please take back the Reigns -- BEFORE ITS TOO LATE.

Thank you for your consideration. Sincerely, Rebecca Waters -- Martindale, TX

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bret Daugherty

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Look, this industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Steven Hemstreet

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sherry McNeil

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Fracking destroys the land, the water and the health of the communities it touches. It has been proven that the practice of fracking is not properly regulated and not taking into account the mess that it leaves behind. I personally believe fracking should be put on hold until it is properly regulated and can be done in a safer way.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Woodfin & Carla Gregg

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rebecca Traub

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, all rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David LaVerne

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country.

To destroy our environment and health to benefit a group that consistently refuses to look at renewable energy, is preposterous.

Keep the liquefied gas in our country to benefit our citizens and reduce production, not increase it.

No impact study is needed. This is a no-brainer. If this group wants to make money with liquid gas, they need to go the countries the are planning to export this gas to, and frack them.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Doris Turner

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Judith Karp

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Alexis Langelotti

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics IN THE SHORT TERM FOR THOSE DIRECTLY PROFITTING. It does not address two staggering costs that utterly dwarf the short-term profits of fracking. One is permanent irreversible change to our very atmosphere. Second is depletion. Our descendants face catastrophic population collapse once we have burned through our fossil fuel treasure like wildfire. We must learn to exist without them before it is too late. In short, LEAVE IT IN THE GROUND.

The DOE has a responsibility to conduct a complete longterm environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. If full assessment is done, we will leave the gas in the ground. It would stay in the ground if we assessed the correct tax on it to cover global warming cost and the suffering and death that will accompany depletion.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bill Christian

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carolyn Martin

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jacqueline Tessman

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or wrongly dismisses the real costs to hard-working Americans and their communities: increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction caused by fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. We deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Perry Hutchison

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Whatever happened to the discussion about HOMEGROWN ENERGY? How does exporting natural gas benefit citizens of this country? The only benefit is to the energy companies. This 'good economics' is only good for the energy industry which does not want to be accountable for destroying the land, the water supply and people's health.

Think about it: How would you like to be living next a fracking farm and watch your land value plummet?

Please do the right thing.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Although I am concerned about everything mentioned in this letter, my greatest concerns lie with the content of the last phrase in paragraph one. It is increasingly clear to me and my friends that the environmental and health costs to huge populations in this country as a result of fracking is being ignored by the administration and a false picture is being presented of the benefits of increased production of LNG and its export.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jeanne Anderson

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I hope we do not ruin our air and/or our water by fracking and then exporting natural gas. This is pennywise and pound foolish! Fracking needs much stronger regulations and disclosure laws. Until then, exporting should not be allowed.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Nicola Nelson

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Les Stern

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We only have one planet and we must take care of it. Money for industry or stockholders will not solve our energy problems. Creativity by the American people and small scale Hydro, solar and wind projects will! Please support alternative energy sources to roll back some of the Climate Change Crises.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Patrice Martin

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sharon Parker

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Edward Foreman

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ellen Brady

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Patrick Gray

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Marilyn Brand

---

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This report has more holes than a block of Swiss cheese, focusing on how the natural gas industry and the wealthiest people in our country will profit.

The report ignores the less easily quantified costs that will be borne by other members of society.

The costs to our citizens and communities -- resulting from air and water pollution, environmental destruction, lost jobs, climate disruption, and even increased energy costs -- are completely ignored or dismissed as unimportant to big business.

The industry-friendly group that produced the report concludes that LNG export is good economics only by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses,

the loss of jobs in industries most affected by LNG exports including domestic manufacturing, projected costs associated with environmental destruction due to fracking, and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American people. A full environmental impact statement for LNG exports should be conducted, including the impacts on fracked communities.

Americans deserve to know what the real costs to us will be when sending natural gas overseas, and rules should be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mike Strawn

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Penelope Johnstone

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jacqueline Lefler

And FINALLY, where is the assessment of the global weather impact of extracting and burning all that gas and its associated leakage (6-15%) on the atmosphere? We cannot encourage the continued development of this fossil fuel without compromising life as we know it. There should be an immediate moratorium on fracking and flaring to curb resource wasting. Then the extractive energy industry should be mandated to develop renewable energy sources with the proceeds derived from fossil fuels. We cannot afford to do otherwise.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John & Gloria Sefton

In my opinion, there is absolute NO reasonable justification for risking the hazards that fracking cause - whether or not the DOE wants to take a look at the complete picture. I encourage you to do the right thing by the average American citizen and not pander to the greedy desire of the oil industry.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Erin Clendening

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

I ask that the long-term effects of this decision be considered more. Natural gas obtained by fracking is still a source of CO2 when burned, although less than by burning coal. Most scientists believe that to combat global warming, we must reduce CO2 generation. While exporting NG may temporarily aid the US economy, it will contribute to the prospects of global warming that will eventually have a much greater economic impact, not only in the US, but throughout the world.

Therefore, I disapprove of any actions that aid fossil fuel production such as associated with the Keystone pipeline and believe that it will be much better in the long run to support non-CO2 producing technologies.

Sincerely,

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Stein

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sarah Kennedy

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Laurie Brunner

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Susan DuBois

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Janet Walley

Tameka Mcbath

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michelle Gobely

Concerning the economic impact of exporting LNG, we should ask how doing so advances our country's energy independence. The volatility of the energy sector is quite clear here in Oregon. Ports in our state that now want to build exporting capabilities were planning LNG importing facilities less than four years ago. We shouldn't support costly projects that offer so little real value to most people in such an unpredictable economic sector.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Secretary Chu,

The idea behind exporting has nothing to do with the energy independence fossil fuel cheerleaders cite as the reason to keep doing these risky things.

Exporting is evidence of energy excess, not independence. As such, we need to ask ourselves are we fouling our own nation only to feed the ravenous energy consumption of the world as a whole?

ALL fossil fuels deter development of sustainable alternative energy. Encouraging natural gas consumption is counterproductive and doing it using the secretive, grossly under-researched risky method of fracking to get it is exponentially worse.

Please do what you can to slow the use of natural gas. If it is widely adopted as proponents wish, the vast stores we're told about will be revealed as the relative pittance that it is.

Thank you,

Bill Jacobs Chair, MCDCC MD 8-10

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anthony Burton

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Katie T.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

There is no way that the pressure forced into the earth that is strong enough to literally crack the rock can be controlled. Ground water is being impacted and it will only get worse. When the water is undrinkable we've lost it all!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

graden west

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Everyone wants energy independence, low cost energy, job growth, increased competitive advantage, but it must be done responsibly. Additionally, the risks we take for energy independence should not be so the gas and coal can be sold to other countries. IT SHOULD BE EXCLUSIVELY FOR USE IN OUR COUNTRY, ONLY.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Shirley Rodriguez

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Danielle Mccorkle

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mario Mesa

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The American People's NATURAL GAS is NOT FOR EXPORT!! While they are being GOUGED AT THE PUMPS by the corrupt Republican OIL corporates with their 3x's too high-priced HIGHLY POLLUTANT gasoline! Then, on top of it all, the corrupt Republican OIL corporates want to STEAL, FRACTURE/DRILL, LIQUIFY & SHIP 'OUR VERY OWN' non-pollutant Natural Gas OVERSEAS under the FALSE PRETENSE that it will CREATE JOBS! \*\*\*\*\$\*\*\*\*! Nothing but MORE of their UNCONTROLLED CAPITALISTIC GREED! It can't happen and it better not happen! We should have been on 'OUR VERY OWN' NON-POLLUTANT Natural Gas for HOME & AUTOMOBILE a long, long while ago! And, by now, we should have ALREADY been CONVERTING to 100% non-pollutant MAGNETICALLY-DRIVEN ELECTRICAL ENERGY for BOTH HOME & AUTOMOBILE! We have 3 VIABLE patents by Howard Johnson in our U.S. Patent Office that have been there a long, long time! We ALREADY have the AC/DC technology to CONVERT over to this form of energy very quickly! It will eliminate ALL MASSIVE POWER OUTAGES because each system of this form of energy is TOTALLY INDEPENDENT of each other! And as far as JOBS ARE CONCERNED; just envision the possibilities for manufacturing, installation & maintenance by everyday workers! IT WOULD BE A BOON TO OUR COLLAPSED ECONOMY! Stop these THIEVES in their tracks, BEFORE IT IS TOO LATE!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lenore Lobel

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karen Shaw

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Donlon McGovern

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

I also think that the industrialized world needs to start feeling the pinch of limited fossil fuels. It's likely that many of the ways we now have for fossil fuels can be done in a more sustainable manner and we can start conserving. It's also likely that some application will be best supported using fossil fuels. We should not waste our fossil fuels now because they may be needed in the future.

Finally, evidence is supporting that our burning of fossil fuels is causing climate change. We should try to reduce the burning of fossil fuels by making them less abundant.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

George Dilg

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Amy Francis

The costs associated with environmental destruction and tracking are massive, as are the costs of the destruction on the health of people and the planet. If we must continue tracking - and it seems that all industry is indicating that that is the way - this gas should not be for export. We should provide gas only to this county to serve its needs.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Jenkins

---

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs

associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gwyneth Smith

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gayle Dufour

Jessie Root

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carolyn Williams

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lawrence Frey

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

James Crowden

In my community we hear 18-wheelers starting up at 3 a.m. when their drivers go to work. Listening to these trucks idle for 30 minutes at 3 a.m. is not helpful for the working folks awakened at this hour. In other communities whose water has been contaminated, a young mother says she spends the entire day hauling water for various household tasks; we seem to be regressing to the status of a 3rd world country.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Amanda Spalt

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

LNG Exports - Just more BS. The report dramatically fails to address the externality costs, of which there are many thanks to environmental exemptions granted to oil and gas in the last energy bill.

You can't truly evaluate the impact without consideration of these costs now forced upon the individuals and communities - destroyed water supplies, infrastructure, boom/bust communities, crime, and the public's health to name just a few.

Oh yes - don't forget the stealing of private property in the guise of eminent domain. Pipeline through your property? Well pads? even your minerals? No need to negotiate - just take it and offer peanuts.

You have your head so far up the \*\*\*\*\* that you think all that BS is sweet. Good for America ? It's just BS. Our future energy supplies are being exported by multi-national corporations to the highest bidder. Now how is that good for America's Future?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Alfred Tuttle

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Scotty Laird

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This 'illogical' industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I 'fully' deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jeb P. Brown

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Please do not let the energy needs of other nations and the financial profits for a few in this country override environmental and health concerns for the American people as a whole. Have not our natural gas reservoirs also been touted as a giant step towards America's energy independence? Shall we trade our future energy security for immediate profits for wealthy corporations and individuals?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bruce Kenny

Fracking is not occurring in the area I live, but that doesn't mean I'm not concerned about the environmental degradation it is causing. The Canadians are having to face the fact that reclaiming oil from the tar sands has had environmental costs. Let's not find ourselves 10 or 20 years down the road with a superfund site to clean up due to fracking.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michelle Trzecinski

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We should absolutely not be exporting natural gas ----- even if it were environmentally friendly, which it emphatically is not.

We should be exporting finished goods, to give people jobs, not raw materials.

We can import raw materials, if necessary, but should never export them.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Daniel Hitt

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Pete Zaidel

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

I live in an area that is being fracked. Our costs to roads, the wounds to the land, the problems with air quality in my area are only beginning. Who will make the road repairs? Who will reclaim the farming land ruined by water storage and roads through the fields to the fracking sites? Who will clean up our air?

Many of the fracking companies have major support components from out of the United States. Why should we pay the consequences environmentally for those companies to export what is claimed by the fracking companies to be a solution to extension of fossil fuels and a solution for high U.S. gas prices when the gas from fracking is going for export?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tina Barbieri

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Deanne Yeager

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Barbara Cicalese
