This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Heidi Homze

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. HYDRAULIC FRACTURING IS ONLY ONE OF MANY NEGATIVE IMPACTS TO THE ENVIRONMENT, HEALTH, AND LOCAL ECONOMIES IN MY STATE. FOR EXAMPLE, WHERE I LIVE IN DELTA COUNTY COLORADO, HUNTING, FISHING, AND WILDLIFE VIEWING CONTRIBUTE OVER \$40 MILLION PER YEAR TO OUR LOCAL ECONOMY. YET HABITAT DESTRUCTION AND FRAGMENTATION DUE TO OIL AND GAS DRILLING AND DEVELOPMENT HAVE BEEN SHOWN TO SEVERELY IMPACT ANIMAL POPULATIONS, RESULTING IN A LOSS OF REVENUES TO THE STATE AND LOCAL ECONOMIES. THE GOVERNMENT NEEDS TO ACCOUNT FOR THESE LOSSES AS WELL AS ALL THE OTHER NEGATIVE IMPACTS OF O&G DEVELOPMENT. WE WILL NOT STAND FOR BECOMING EVEN MORE OF AN ENERGY COLONY FOR THE BENEFIT OF HUGE CORPORATIONS AND THE REST OF THE WORLD ANY MORE THAN WE ALREADY ARE.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

An honest assessment of fracking and the damage it has done to local environments should give pause to anyone concerned with the future health of our nation. Please take a close look, then consider that gas companies will not even tell us exactly chemicals they are using saying this information is 'proprietary' in spite of the damage to real people and their livelihoods. Please take a close look and make a decision against these gas companies.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bob Kennedy

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carl Schaefer

Secretary Steven Chu

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Heather Savino

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kevin Kostiuk

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kathy Williams

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Moira Murphy

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lynn Glesne

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rex Ramsay

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The state of California is in the process of assessing information primarily from oil businesses and private land owners that may be involved in fracking. Very little time or availability is given to citizens of the state or of potential fracking locations for their (state citizens) informed responses publicly. Frankly, it looks like quite a bit of 'under the table' negotiations are going on to benefit the LNG development and gas exports possibilities and those closely related.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lin Penrose

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs

associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Contos

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Sincerely,

Alex Steinbrecher

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Pam Pawlak

Secretary Steven Chu

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

There are so many small communities that have already decided against allowing fracking in their local areas because so many people realize the dangers involved. I am surprised that the DOE has not yet looked at the bigger picture more carefully and responsibly. Please do open your consideration to more than the businesses standing to profit from this.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Alix Keast

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Janis Nori

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ricky Deodati

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tracy Cole

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Barry Curtis

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

With regard to proposals to export fracked gas:

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. We deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Moreover:

The original [perhaps disingenuous] excuses to begin poisoning our water & environmental security for the benefit of our energy security was for its use entirely domestically, here in the nation of our birth, to wean ourselves from dependency on foreign petrochemicals.

First and foremost, this energy source while perhaps 'cleaner' the refined liquid petroleum, is still fundamentally a major contributor to atmospheric greenhouse gases. The idea is to find at least carbon-neutral sources of power, or better, carbon-sequestering methods -- not more & more sources of fossil carbon our insensate forebears unwittingly locked away for us over the previous tens & hundreds of millions of years -- producing [wha'd'y'know] just the right atmosphere for Homo Sapiens to become Sapiens -- we should only hope. Claim your birthright. Sapiens mean wise. Be wise, here and in all things you regulate.

Fracking in all its forms is bad business, to the seventh generation.

But to consider exporting domestic fracked gas just accelerates the planetary suicide, genocide, patricide and every other -cide.

Please relegate this proposal to the roundfile where it belongs.

Your patriotic American citizen constituent, Jon Longworth

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eloise Marszalek

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Roberta Ansell

Secretary Steven Chu

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karen Collett

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Citizen health and environmental health is way more important than a company's financial growth which they may consider 'health.'

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karen Mayer

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Our communities are at stake, hence my concern. Public health and quality of life is of concern. Those of us who live on lands impacted by hydrolic fracturing are deeply concerned. We matter. I live in a region where our main industry is tourism and farming. These industries would be adversely impacted. There is a strong likely hood that toxins would get into the food supply impacting people living in cities dependant on that food. Please continue reading.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Judge Leverich

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Joel Strauss

Keep the gas that we have here in the USA; sell to local states and countries only (so, Canada and Mexico, Caribbean) and keep working on renewable resources!

And, speaking as a scientist, the only data that should be submitted is data from completely unbiased research- Dr. Chu, you know better!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Christine Cooper

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karen Pedersen

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Achata Achata

Secretary Steven Chu

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Robert Taggart

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eileen Bryant

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Susan Stover

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Wilder Boule

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mitchell Cerrone

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The Sand Mining component of the international energy coalition is poised to destroy the environment and society of Southeast Minnesota in their quest for inexpensive propants to exploit US shale beds. Now there is talk about mining sand in our neighborhoods to ship to China for their fracking operations.

There is no long term benefit to the planet from further adding to the CO2 and methane load in our atmosphere . Why accerate the demise of life on our special little planet as a result of climate change.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Diane Carroll

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Fracking is a disaster to land, water, air and the people, plants and animals who rely on those resources. I have personally read numerous instances of massive cattle kills related to this process as well as people incurring deathly respiratory ailments and loss of farms, ranches, gardens etc related to this deadly practice. Oil and gas companies have a history of destroying our environment and passing the clean up costs on to taxpayers.

We hold you and your administration to high standards and will not accept studies fabricated by strong fossil fuel industry ties. We hold you to a higher standard than the guardians of the tobacco industry who purposely misled the people via PR campaigns and sham studies resulting in the deaths of many for the profits of a few.

The lives of innocent people are depending on your actions.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gay Hopper

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Will Yeager

Secretary Steven Chu

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Mr. Secretary,

I am a homeowner in the Catskills, right on top of the Marcellus shale. Not only are our land water & air under immediate & dire threat; so is our beautiful region's tourism industry & all the other industries fed by it. As if that weren't enough, as reported recently in the NY Times, the Catskills housing market is depressed while other areas are seeing a rise, specifically because people are awaiting Gov Cuomo's decision on allowing fracking in NY State. How dare our govt in Washington too rely on the fox to guard the henhouse??!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Kristen Lowry

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports. Please take into consideration the severity of drought in the Western States. These states have no excesswater to use for fracking, specifically when the use of water for fracking neglects and takes the water for farms. Fracking has been found to also effect the quality of water for home and business use, causing tap water to enflame when lit with a lighter, match or candle. Thus Fracking during severe times of drought endangers all access to clean water and to farmers/ ranchers who grow food and livestock for a living.

When natural resources are far below the average, fracking enterprises should be suspended in favor of quality of daily life.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Randi Levin

Secretary Steven Chu

Dear Secretary Chu,

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kevin Woodworth

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sandra Franz

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Salvador Moreno

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Fiona Nolan

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Devry Garity

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sheri Randolph

Niccole Toral

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Hedda Haning

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Candace Plemmons

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rusell Lombardo

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Stan Sheggeby

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Diane Eisenhower

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Beatriz Pallanes

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities. There will be increased costs to heat our homes and businesses. Jobs will be lost in industries most affected by LNG exports, e.g. domestic manufacturing. There are costs associated with environmental destruction due to fracking, e.g. healthcare costs for those affected by polluted air and water. The methane released during drilling and the carbon dioxide produced during liquidification will accelerate climate warming and sea level rise. Fracking fluids injected into the ground will ultimately leave a legacy of pollution and medical problems that future generations will have to deal with. LNG islands along our coasts will result in destruction of ocean habitats and impact whales and other ocean wildlife.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. Citizens need to know what the real costs will be when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

George Frame

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Fracking has caused a lot of damage to some areas. This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact

statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Donald Wright

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gretchen Kenney

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gigi-Change Penn

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paulette Tansey

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Jacqui Skill

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Exporting gas to the international market encourages fracking. Yet, there is no health assessment study on the impact of fracking on the people in the communities with fracking. The NYS's SGEIS regulations are a joke in terms of science. No published peer reviewed studies and no footnotes to support their positions. The authors of the economic study on which you are basing your decision to fast track LNG export terminals should be examined by an ethics committee because of their links to the gas industry. University of Buffalo and Penn State University are in the embarrassing position of having some of their professors under investigation by their own university ethics committees for publishing work tainted by industry bias and links of the calibre of the study you are acting upon. As a scientist, are you prepared to show how that study could pass an ethics committee. Your reputation is on line.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Addie Lucas

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Alfred & Sally Alcorn

Secretary Steven Chu

Dear Secretary Chu,

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Exporting LNG only increases the speed at which we burn fossil fuels and add carbon dioxide to the atmosphere. This is in addition to many other greenhouses gases emitted in the exploration, drilling, fracking and transportation of LNG. This speed up in consumption of fossil fuels is driven by greed and is completely ignorant of the costs to the environment, and to all inhabitants of this planet. This will only serve to hasten the demise of human life on earth.

This industry-friendly group only concludes that LNG export is good economics by on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Greg Sutherland

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Andrew Henderson

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Tuula Fischer

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Linda Winkler

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anthony Meoni

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Bello

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Eric Angelosanto

Secretary Steven Chu

Dear Secretary Chu,

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I know people who are normally social and community-minded. They are not the kind of people who are afraid of new ventures, and not fixated on environmental issues in a knee-jerk kind of way. They have already suffered from fracking - the heavy traffic, roads busted up, loss of a decent surround, and along with others, no longer drinking healthily. Help get this devastation properly evaluated and controlled!

Anna Burton MD

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Evelyn Adams

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Wiley Bolen

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Welker

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Industry backed experts in any field of study tends to slant the reports in favor of the industry. While it might be hard to find independent experts on Fracking, we need to try to do so BEFORE we go down the reckless path of explosive drilling using Fracking.

We need to eliminate or severely limit the use of Fracking until we understand all the real costs of doing so. Right now a large amount of our natural resources are being exported. I would like to see the industry scaled back to just what our country needs are until we know for sure what the true costs are and carefully weight whether this is a cost our county can afford to be paying. Allowing exports of a limited supply resource using questionable practices seems ridiculous to me.

Thanks,

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Beverly Wrench

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dr. Thomas Moulton

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carol Kastendieck

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country.

Fracking's biggest effects will not be economic but ecological. Let's look at that.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karin Winegar

Secretary Steven Chu

Economics should never trump environmental impacts, of which there are many when dealing with high-volume horizontal hydrofracturing. Our quality and quantity of life are both at risk, now and in the future.

Also, the industry tries to sell their agenda by claiming we can have energy independence in the U.S. Exporting the gas has nothing to do with energy independence!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Joseph H Evans

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Maureen Cleveland-Ryan

Secretary Steven Chu

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michael Schmidt

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Strasser

Secretary Steven Chu

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gordon Lackey

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sara Ostrov

Secretary Steven Chu

Dear Secretary Chu,

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Barbara Frances

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

MaryJane Duncan

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Darleen Cox

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Calvin Cole

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

With as many unanswered questions as there are relating to natural gas extraction by the process of 'fracking,' the American people in their great majority are ill-served by the unquestioned acceptance of an industry-friendly study which favors a 'more is better' approach. Come on Mr. Secretary, consider the source.

Sincerely yours, Edward G. Barry 27 Deer Cove Street Lynn, MA 01902

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Edward Barry

Secretary Steven Chu

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Timothy Shanahan

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dori Cole

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports. It is outrageous to even THINK about fracking for natural gas and THEN to export it!! IWe the land owners will not be profiting from this. It is just another ploy for the oil companies to exploit we the land owners while they gain more profits.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mildred Rodriguez

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Judy Mckinney

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

These projects need to have their financial aspects separated from their environmental impacts. Study the effects on local impacts and it's obviously bad for those anywhere near the wells and processing. Greed driven, not general well being of the people driven. Fracking is bad for America, which will be left with Superfund cleanups of a magnitude we haven't seen.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Judy Stankewicz

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sarah Jagdmann

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I hate the problem of the common American citizen being at the mercy of the big money making corporations. This is immoral, and should be the American way.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Marilela Bloom

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Sincerely,

Alexandra Pappano

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I am a Colorado resident whose state is being severely impacted by fracking. One recent example is that a storage tank of fracking waste water exploded and killed a worker. The broader problems associated w/ fracking (methane pollution of the environment, high water usage and pollution, earthquakes, etc) should be common knowledge to you. Although Colorado has begun research on the impact of fracking, the fracking process has been allowed to continue while the research is being conducted - how stupid is that? The irreversible damage will have been done by the time the research proves that fracking is not a good idea!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lisette Sweeney

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Douglas Higgs

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The argument goes that we frack for natural gas, decimate mountain ranges for coal, go after shale and tar sand deposits (all environmental disasters) in the name of making USA energy independent. (What a farce!) We should not be pursuing these dirty carbon based energies to begin with, much less exporting them at the expense of our lands and the health of the planet. I am outraged.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Allowing LNG exports will only accelerate high volume horizontal fracking when the process is clearly not safe and will result in more leakage and venting of methane, a very potent greenhouse gas, into the atmosphere. In addition, it is likely that exporting will also increase the cost of gas here which would

raise our costs of power production and manufacturing. It would make far more sense to harvest the gas we have slowly over time and allow it for use here which would lower manufacturing costs. The gas can be used to make products and allow this country to export the results of American labor rather than simply exporting a raw material. Environmentally and economically it makes far more sense to use the gas here and slow the air, ground, and water pollution caused by HVHF at the same time.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Weinkauf

Secretary Steven Chu

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Thomas Swimley

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

There are wind turbines that would be MUCH safer for the environment, why would anyone knowingly put poison in their children's water and food. But that is exactly what they are wanting us to do. GOD, gave us this earth to be SHEPARDS of to care for it to use it wisely. NOT destroy it with FRACKING. Please, love the earth and protect it as you would your children's lives from Murders and Rapist's. That is exactly what Fracking does Raping and Murdering the land. Our EARTH!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs

associated with environmental destruction due to fracking and health care costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Patricia Gonzales

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Danette Schau

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The report also ignored damage to local infrastructure - which the energy companies contractually shield themselves from, the fact that all methods for the plugging and capping of wells will not survive even a mild earthquake, the fact that the energy industry consistently misrepresents or outrightly lies about the negative consequences of its actions, and aggressively fights to avoid paying for the disasters it causes.

The energy industry must be closely regulated and the resources of this nation must be used by this nation in the coming age of resource scarcity.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rodger Parsons

Secretary Steven Chu

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lisa Gilling

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Grace Southern

Secretary Steven Chu

Rose Marie Martin

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

My neighbor has his PA property fracked, and his amish neighbor has his water now delivered to because of methane contamination.

As a nation, we cannot allow to pay such a price of environmental damage for the gas and export it to others.

It's hugely hypocritical.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Nicole Miller

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities: increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. Americans deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Bernard

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's like asking McDonald's if they have soy in their burgers, they take 6 weeks to reply and after compiling a pile of skewed data, they say 'no we don't have soy in our burgers' It's a commonly understood fact that they do, and that Monsanto will stop at nothing to keep soy in the burgers. Do your part to the American public and stop accepting misinformation because it makes it easier to balance your checkbook.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Maureen Mehler

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Joyce Flynn

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anne Morton

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bob Lawlor

Secretary Steven Chu

Dear Secretary Chu,

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sheri Hill

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Gary

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. Barry Adler

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I have worked for years in the gas industry, and I have little faith in its credibility. Please solicit other input on this matter, especially on historical impacts on communities near production areas, and the safety of the pipelines built. And something else that never appears to be considered is the strategic value of energy resources in time of war. Do we have to sell it all off now? What about energy independence and resources for future generations?

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Thanks for listening.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Richard Madole

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Andrea Martina

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and most importantly, projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including especially the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jon Rodin

Secretary Steven Chu

Dear Secretary Chu,

If natural gas produced in the US is so good for the US, why are the drilling companies pushing to liquify it and send it overseas. Exporting US produced natural gas won't hold the cost to the users down, the user cost will go up enriching the drilling companies and further harming the average tax payer. And at great cost to the environment in the US, a cost to be paid by all the US citizens. It's time we got serious about ending our fossil fuel addiction and moved systematically to renewable energy sources.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Miriam Bloom

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bill Johnson

Secretary Steven Chu

Dear Secretary Chu,

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

And, we need to do all we can to keep fossil carbon out of the atmosphere. Fracked gas leaks so much methane into the atmosphere - and LNG production and transport even more - that the climate cannot afford this.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Dimarco

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Mary Gold

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

There are many evidences that fracking pollutes underground water, which would in turn pollute residents' drink water supplies. An exporting business model would encourage profit at any cost, including residents' health from polluted drinking water. And sounds highly dangerous to me. Even worse, current laws do not require the fracking industry to disclose the ingredients of their fracking fluid, so there could be many pollutants that we are not even aware of, let alone planning how to control such pollution.

The DOE should investigate deeply and without bias the often neglected but very important costs of fracking, i.e., water pollution and health impact, before promoting a risky idea such as exporting natural gas.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Wenyu Jiang

Secretary Steven Chu

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ana R

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kendra Bickler

Secretary Steven Chu

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sam Simeone

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Deirdre Fritts

Secretary Steven Chu
