The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Christine Sirias

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

It's bad enough that we allow fracking to contaminate our environment 'for the good of our country' (read: for the profits of the oil industry) when at least the gas stays within our borders. But to further enrich the greedy oil people by sending it abroad is unconscionable. This bid just proves what we always knew: that greed knows no bounds and the oil industry is interested ONLY in profits, not the good of our country.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Elisabeth Kepley

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Cathy Wituk

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

anne baglini

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Reanna Wade

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lorraine Mitchell

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Sepe

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Now, more than ever, it is important to do studies on the environmental impact of new industries such as 'fracking'. Companies that stand to benefit from this process should not be given more rights or leeway than the people who will be impacted (which is everyone in the long run). We haven't even recovered from the environmental disasters from previous permissive dirty energy efforts. No matter how we move to solve our energy needs, it will involve people changing life habits in some way. Let's take the time to go forward with the preservation of our environment and with a mind to teaching younger Americans how it is done.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

It is atrocious that U.S. companies export our natural resources for their profit at the expense of the lives of Americans!!!! We bear the burden in every way by the failure to reduce our own energy costs and in the irreparable damage to our land and water which is essentially equal to irreparable AND IRRESPONSIBLE damage to our lives and the lives of every living creature.

How can you let that happen? Search your God-given conscience with remembrance of the responsibility which has been entrusted to you.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Your current decision is clearly a corrupt attempt to enrich your handlers at the expense of the rest of humanity. It is well past the time to get serious about the future of our planet and not the financial enrichment of a few sociopaths.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Plance

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Veronica Restrepo

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Colleen Esra

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Menachem Shuchat

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

So much information about the harmful effects of fracking is already available to the public. There is simply too much risk with this extraction method. I urge you not to participate in the trade of fracked gas and do everything in your power to halt its production. As a nation, we should be investing more in renewable energy, not in harmful non-renewable sources, particularly when they use such harmful chemicals as fracking and carry such risk.

Thank you for your consideration of my opinion.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Wynne Geikenjoyner

I can see that if natural gas produced by fracking were to be exported it would lead to more fracking across the country. This is a terrible idea, not only would that be dangerous to export it would destroy any community that is involved. I know that here in Colorado there are several communities that can light their faucet water on fire! Even the animals on the properties are dieing from exposure to destructive carcinogens. Lastly this is not a concern to the DOE because the fracking companies dont have to abide to the Clean Water Act!!! STUPID is the only word for this!!!!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Allan Johnston

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Paul Turner

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Gerald Brady

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Peter Mayes

For those of us living over the Marcellus and Utica Shales, a decision to permit export of natural gas poses the threat of faster and more reckless fracking. It will represent federal absolution for the imperious and mendacious industry conduct that has been suppressing human concerns in America's rural communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Linda Falk

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Nancy Szymczak

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Noel M Beck

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Karen Gordon

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Aaron Spencer

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Bernadine Turner

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Don Smith

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kim Nielsen

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Being good for the LNG industry does not mean good for America and it's citizen's.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ross Aird

Katherine Doerr

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Not only do we, the people, NOT want this dirty coal anywhere near our neighborhoods, we don't want all the baggage it will bring. I'm sure China has ALL the coal they'd ever need right there in China, so why would we support more 'dirty' coal being excavated from Montana and Wyoming. Surely you've driven by Billings, MT??? Doesn't that say enough? Why do we need to be double-whammied? first the coal pollution being shipped through our neighborhoods, causing major traffic backups, causing more devastating noise in the Salish Sea for our endangered Southern Resident Killer Whales with more tankers, but then if/when China burns this coal, we get the dirty air back from them??? How would you feel if this was in your neighborhood?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Jill Hein

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Elizabeth Izzo

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Michalek

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Emilia Mello

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

We do not need to produce poison, opr ship it over seas, or use it here.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Matt Miller

-----  
Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Georgia Shankel

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I've seen many industry power plays in my more than 91 years. and I deplore the legacies such actions leave to our children, grandchildren and their successors. This NERA study fails in many respects to disclose the hazards to the environment, the public health concerns and the economic costs to our citizenry. It is high time to stand up to the wealthy lobbyists and recognize the vital concerns of our populace in rejecting the NERA report.

The time has come to go back to the drawing board and conduct a truly objective independent study of how LNG exports will impact our citizenry.

Sincerely,

It's time to go back the drawing board and conduct a truly independent

To what end will the Natural Gas Industry go to get more \$\$\$\$\$\$\$\$. They will go the complete destruction of our environment, our water and our air. Fracking and the ability for the government to overlook its destructive powers will allow big businesses to gain more moneys and destroy our health. NOW, they want to send natural gas over seas!!!! The Natural Gas Industry does NOT have to tell us what chemicals they are pumping into the ground. They do not tell how much fresh water they use to pump back into the ground. One day soon, there will not be an endless supply of clean water. The results of the contaminated water coming out of the ground is not monitored well and where is it taken. Our government overlooks these travesties that big Oil and Gas do to create a profit.

A free hand is not what these businesses want, now they want to send it overseas at the expense of our citizen's health. Please stop this destruction and please stop this extraction of Natural gas.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I thought that fracking for natural gas was the answer to our country securing it's energy independence. Now I find out that there's plans to export natural gas ! I like in upstate NY. And the pressure exerted by the gas industry to frack here gas been unrelenting. Not only will this contaminate our state's ground water, but the gas industry wants access to our state forests, parks, wildlife management areas and other public lands.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Connie Lovingood

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mark Pasquesi

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

The bottom line should never refer to a company's profits. It should refer to the true cost to the American people. Until this cost assessment is made by independent scientists, LNG exports should not ever be allowed. We have made far too many environmental mistakes in the past due to lack of scientific information. Please do not make any more such tragic mistakes.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

You folks need to protect life, or else all the money you big boys make will be buried with you. Won't have any family footsteps to pass on to.... They'll all be dead because of your stupid money grubbing greed. You have the money and power to make law.... Just change the technology and the sources for power. If you're going to stay rich, then you better stay alive to enjoy it... Make the change and be the good guys for once... You could be the heros of the world....

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rosemary Zerr

TODAY, IN THE MOJAVE DESERT NEAR THE NEVADA BORDER, ON OVER 5,000 ACRES, OVER 70,000 70 SQ. FT MIRRORS ARE REFLECTING SUNLIGHT ONTO FOUR GRIDS. WHEN GRIDS ARE FILLED WITH WATER, THE RESULTANT STEAM WILL POWER 140,000+ HOMES ( HEAT, LIGHT, ELECTRICITY, AIR CONDITIONING, POWER FOR ELECTRIC VEHICLES, WASHER AND DRYER, ETC. ). IN A RECENT NATIONAL GEOGRAPHIC , THERE WERE PLANS FOR A SEVERAL MILE DIAMETER OF PHOTO VOLTAIC CELLS THAT WOULD CAPTURE ENERGY FORM THE SUN AND TRANSPORT THE ENERGY VIA A CABLE TO PLANET EARTH. INFINITE REVIEW AND SPECULATION SUCH AS STATED ARE INDICATED FOR SUSTAINABLE AND NON-TOXIC SOURCE OF ENERGY. WE HAVE ALREADY DONE WRETCHED DAMAGE ( THE GULF OF MEXICO WAS SLICK WITH OIL FIFTY YEARS AGO. TODAY, IT IS COVERED WITH A FILM OF OIL )

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Krista Gobby

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Marilyn Zyzda

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Carol Roe

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A 'full environmental impact statement' for LNG exports must be conducted, including the impacts in fracked communities.

I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

NERA Economic Consulting is an 'industry-friendly group' which concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country.

The NERA Economic Consulting report completely ignores or unfairly dismisses: 1) the real costs to hard-working Americans and their communities which includes increased costs to heat our homes and businesses, 2) loss of jobs in industries most affected by LNG exports, 3) domestic manufacturing, and projected costs associated with environmental destruction due to fracking, and 4) healthcare costs for those affected by polluted air and water.

It's time to go back to the drawing board and conduct a truly independent study of how LNG exports will impact the environment, communities and people who live in our communities.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Henry Bjorkman

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I live downstream from extensive fracking activity, and both demand and deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Robert Gebert

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ann Van Hise

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

we really need to begin looking more at alternatives that the wealthy could invest in and still make money, but also maintain a better quality environment for all creatures on this planet. Not just humans. We need to start improving our land, water and air, not further poisoning all of it for the sake of share holders and board of directors.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

I am personally horrified with what has happened back east and now in ND with fracking. I do not want it starting anywhere else. We are contaminating our water aquifers. Water is becoming more and more a precious item. We would rather have clean water and soil than dirty gas. Then there is the increased greenhouse effect from the flaring oil wells that are another negative side effect of fracking. Please stop this slow form of suicide for our species and planet..

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Lee Udall Bennion

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Katherine Cookson

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Anna Goodhand-Allmand

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the long-term benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities to the fresh water. As a citizen, I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports (Oil or Gas). If the related actions of the DOE cannot be mitigated to a level of insignificance, then your action should be to error on the side of safety and deny.

The DOE is suppose to serve the needs of the American people, not exploit them. Alaska uses commons to export it's natural resources thereby compensating Alaskan citizens. How can the DOE support the exploitation of America by big oil and gas without due compensation? A true cost and benefit analysis must be done before any decision is made which will effect every American citizen and rob us of our natural resources. **DO NOT ALLOW THE EXPORTATION OF OUR NATURAL RESOURCES (Natural Gas/Oil) WITHOUT DUE COMPENSATION TO THE AMERICAN PEOPLE.**

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rudy Meyers

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Blanca Denieto

The USA needs a reserve of LGN for our nations use, NOT to a foreign competitor!!! America's energy interests are more important than corporate profiteering. If you think that you are part of the revolving door, then you should RESIGN NOW!! Just like some of your corporate leaning counterparts in the Obama administration.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kay Helms

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group concentrates on the business side of the issue--money to be made. But I'm most concerned about the environmental impact: we do enough damage to our land, water and air when prospecting for our own usage. We don't have to ruin the country so that other nations can use our energy. Besides, won't this raise the cost of energy for us?

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Rules must be in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Charlie Graham

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

Furthermore, no consideration is taken of externalized costs in fossil-fuel exploitation. Continual facilitation of fossil fuel extraction contributes mightily to the process of climate change whose economic, environmental and health costs affect us all. If we were made to pay the actual costs of

fossil-fuel development, we would soon discover we could not afford to exploit and facilitate the fossil-fuel path.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Randall Gloege

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

I come from Southern Nevada originally. I grew up in the 50's and 60's when the US Government lied to us about the safety of the nuclear testing. I have watched my family and friends die from the exposure to the materials in those tests. I won't sit back quietly, and let the US Government do it again, when it comes to the exposure of fracking chemicals, to the state of Colorado, especially the Western Slope. I am tired of the wealthy O\*G industry, getting away with lying in order to make their profits at any cost.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Mary Hughes

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Sonja Chan

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

Something like the fox and the hen house?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

John Hogben

-----  
Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michelle Pavcovich

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Terence Craig

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

In Colorado many people get their water from wells and I am worried that the fracking procedure will ruin the aquifers that provide that water. I have never read in a newspaper or online anywhere that someone or their company is able to prove fracking is safe or that our water will remain safe for future

generations - hundreds of years into the future. I don't think fracking is a positive step for our country and now, because someone states it is 'good economics' the gas will be exported and NOT kept for the people in the US? I think it is damaging enough that fracking has been permitted in populated areas. What happens to the water damaged in this procedure? We will have to risk our health, our environment and our future generations' resources to get this stuff exported? I think this is a bad choice. I also have yet to hear what happens to the damaged-beyond-repair-and-future-use of the water used in the fracking procedure.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests and our health, safety, environment, air, wildlife and wilderness, and continued availability of clean water before DOE authorizes any exports or hands out any more fracking permits anywhere in the USA.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Hj Withers

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Peggy Moye

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Grace Flanigan

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kathryn Miller

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

I am a Prof. Emerita of Physics from the U of WI - Madison, now living in Colorado, and was very pleased that you were offered and accepted being Sec. of Energy. I understand the damage done by tracking, as do you. Fracking harms the environment and pollutes water. Please stick to cleaner sources of energy for the sake of the whole planet!

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact

statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Arja Moy

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Caitlin Segal-Mains

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Dana Spencer

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Please do not ignore the science behind fracking. That is incredibly irresponsible and a disgrace to your position in the government of this fair country. I understand that our world is hungry for energy, and that fracking is cheap. But you above all people must understand that giving the industry and the petroleum investors this free pass is like surrendering over our public health to a shark. Don't kid the citizens of this country, yourself, or the future, who will all (with exception, maybe, to your spineless self) deeply regret the repercussions of this terrible report if it's allowed to go unchecked. The new report must be scrutinized like all good science, not glorified on account of it's profitability.

I trust you will not throw your countrymen and women to the lions.

Sincerely, Scott A Staskus

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Leigh Anne Keener

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Rose Rodriguez

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Ronald Carlson

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

LUISA Agostini

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Michaline Lepaule

-----

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

MORE IMPORTANTLY, THE CESSATION OF THE PROCUREMENT AND USE OF ALL DIRTY ENERGIES AND FOSSIL FUELS IS LONG OVERDUE. THERE ARE CONSEQUENCES FOR THE MISUSE OF THIS PLANET. NOW IS THE TIME FOR ALL GOVERNMENT ACTORS TO WORK TOWARD THE RESTORATION OF THIS WORLD TO ITS BEAUTIFUL, PRISTINE CONDITION BY IMMEDIATELY TRANSITIONING FROM FOSSIL FUELS TO NEW, CLEAN, GREEN ENERGY TECHNOLOGIES. ALL GOVERNMENT ACTORS ARE RESPONSIBLE FOR THEIR EFFORTS TOWARD THIS END.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Robert Jenks

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

Dear Secretary Chu: Let's create with industry's input reasonable regulations and strict enforcement thereof for the safe and clean retrieval of shale gas BUT do not allow for the export of any of our domestic natural gas. It is way past time for America to be 100% free of foreign oil and what GOP presidential primary candidate, Jon Huntsman, argued is the cost to taxpayers of at least \$9 per gallon of gasoline OVER the posted price at the pump to provide greedy Big Oil with Middle East security and secure terminals and shipping lanes despite Big Oil obscene profits and little or no tax payments. ENOUGH ALREADY!

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

David Dodson

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve

to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

H Ozeran

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be put in place to protect our interests before DOE authorizes any exports.

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Kathy Lochner

Secretary Steven Chu

Dear Secretary Chu,

The recent economic study on liquefied natural gas exports by NERA Economic Consulting is a flawed report that must be rejected by DOE.

This industry-friendly group only concludes that LNG export is good economics by focusing on all the money that would flow out of our pockets and go to the natural gas industry and the wealthiest people in our country. The report completely ignores or unfairly dismisses the real costs to hard-working Americans and their communities -- increased costs to heat our homes and businesses, the loss of jobs in industries most affected by LNG exports including domestic manufacturing, and projected costs associated with environmental destruction due to fracking and healthcare costs for those affected by polluted air and water.

The DOE has a responsibility to conduct a complete environmental and economic assessment of LNG exports to truly determine if it is to the benefit of the American public. A full environmental impact statement for LNG exports must be conducted, including the impacts in fracked communities. I deserve to know what the real costs will be to us when sending natural gas overseas. Additionally, rules must be

put in place to protect our interests before DOE authorizes any exports. As it stands in this proposal, America would take all the risks to the environment, communities, and any clean up of contaminated water or other disasters while big gas/oil profits and other countries get the benefits of gas from a stable country. If fracking can be done safely then keep it in the US. Isn't that the point of energy independence?

It's time to go back the drawing board and conduct a truly independent study of how LNG exports will impact our communities.

Sincerely,

Janice Hoffman
