"2012 LNG Export Study" my comments

LNG exports mean more fracking and the European Union did an exhaustive research on the long terms risk associated with fracking and has deemed the process just too risky.

<http://ec.europa.eu/environment/integration/energy/pdf/fracking%20study.pdf>

In addition recent science pronounces that the greenhouse gas emissions in the form of CH<sub>4</sub> may be as high as 9% , a danger we cannot afford if we are to have a future similar to what we have known.

<http://www.nature.com/news/methane-leaks-erode-green-credentials-of-natural-gas-1.12123#/>

Furthermore there are many costs that are not being pictured in, one is the tragic consequences to communities where fracking is taking place, impacts to their quality of life, impaired water, air pollution, impacts to property values, and serious undeniable impacts to the health of those living near gas production.

[http://en.wikipedia.org/wiki/List\\_of\\_pipeline\\_accidents\\_in\\_the\\_United\\_States\\_in\\_the\\_21st\\_Century](http://en.wikipedia.org/wiki/List_of_pipeline_accidents_in_the_United_States_in_the_21st_Century)

Other danger that I hope you include into the 2012 LNG Export Study"are LNG accidents, LNG explosions, LNG tanker risks, LNG fires, LNG vulnerability to terrorist attack, LNG tankers - facility - pipeline vulnerabilities, and many LNG accident and safety concerns.

<http://www.timrileylaw.com/LNG.htm>

Enormous and vulnerable LNG tankers, carrying billions of gallons of natural gas, will arrive and dock dangerously close to populated communities to offload their hazardous LNG, posing an imminent risk of danger and widespread devastation.

To sum up, LNG is ripe with risk and danger ,it is not going to bring prosperity to the US, it is a risk that we cannot afford, Jobs and prosperity can be had in being the world leader in innovation and research in green sustainable technologies. LNG is another fossil fuel, a finite resource that only postpones the inevitable.

Thank you, Jenny Lisak
