Subject: LNG Export Terminal Permit Requests

I urge you to deny requests for expansion of natural gas export terminals until the EPA is allowed to study and deal with the widespread negative environmental impact on our water and air caused by hydraulic fracturing. The fact that this industry has been exempted from regulation is a most egregious example of the public welfare being trumped by corporate profit. Clean water and air for millions of people, now and in the future, must remain our priority in civic decisions. Please, help turn us toward sustainable energy solutions for the benefit of our planet and all of its residents.
