

Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

David Christensen

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Wise Skillman

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our

country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Andrew Salas

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

I also happen to be a government employee looking at coping with loss of wages (through furlough) because of mis-management of government income through frivolous spending. Creating more jobs allows the government to take a percentage in income taxes, in case you aren't aware the sort of wage earners we are talking about here are highly skilled in metal trades and earn high income. Then there is the systems effects for service industry partners adding casualty control, fire prevention, computer automation, security monitoring ,etc that benefit from developing facilities to handle the product. Please hear my concern, it is not a complaint-it's a plea to do what's best for all of us.

Sincerely,

Kipling Brumm

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Susan Ackeridge

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Allan Krenek

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Mary Hager

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Linda Rothenhoefer

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

richard frank

---

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

David Large

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

jack kennedy

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

JUDITH MARTIN

PO Box 1435

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

PO Box 59001

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Marvin Miller

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,

Dave Marino

5803 Adelaide Dr

-----Dear Mr. Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Bill Heckman

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make

the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Darryl Frank

-----  
Dear Secretary Chu,

Now that the Department of Energy (DOE) has released its study on the macroeconomic impacts of U.S. liquefied natural gas (LNG) exports, I believe it is imperative that your department quickly approve all pending export applications for non-free trade agreement countries. As you know, the analysis concluded that, "In all the scenarios analyzed in this study, NERA found that the U.S. would experience net economic benefits from increased LNG exports." This conclusion adds to a mountain of recent studies finding that the benefits of exporting LNG would exceed any associated costs.

Granting permit approval for increased U.S. exports of our abundant natural gas resources is an economic winner for the American people. Each project that is built would be a multi-billion dollar private sector investment in the U.S. economy that will create jobs, stimulate economic growth across many sectors including manufacturing, and reduce our trade deficit. Construction and operation of a single new LNG project could create as many as 48,000 new jobs in design, engineering, construction, and operation, which in turn translate into hundreds of millions of dollars in new wages for American workers. Additionally, total local, state, and federal tax revenue created by a single facility could exceed \$4.5 billion over the 30-year lifespan of an LNG export project.

It is also clear that the United States has an abundance of natural gas, which will allow us to seize the opportunity to increase exports while simultaneously increasing domestic use for power generation, manufacturing and transportation. Proven reserves of U.S. natural gas have increased dramatically in recent years, and experts now estimate that the United States has almost 100 years of supply at current levels of consumption. Given this abundance, the recent DOE macroeconomic study indicated that the United States can export gas without significant domestic price impacts, as the exported gas would largely come from increased U.S. gas production, creating more jobs and economic stimulus.

Furthermore, LNG exports are in the geopolitical and environmental interest of the United States. Becoming a reliable global supplier of natural gas will allow us to support our NATO allies in Europe with

a stable and reliable source of natural gas, as well as provide needed fuel for our long-time allies in Asia, such as Japan and Korea who depend on LNG imports. Similarly, the global environmental benefits of increased natural gas use cannot be understated. Natural gas emits roughly half the carbon dioxide emissions of coal when burned for electricity, and little to no emissions of sulfur dioxide, nitrogen oxides or particulate matter. The U.S. Energy Information Administration recently determined that we have reduced greenhouse gas (GHG) emissions in the United States to 1992 levels specifically because of the increased use of natural gas. By exporting LNG, the United States will be providing the world with access to a source of cleaner and reliable energy that can help reduce global GHG emissions.

It is clear that LNG exports to America's trading partners are in the public interest. Pending permit applications for LNG facilities should be approved without delay so we can take advantage of this unique American opportunity to create jobs, boost the economy, and reduce our trade deficit, all while continuing to expand domestic use of this clean-burning source of American energy.

Sincerely,

Laura Cooper

-----

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
JOHN CORMIER

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Khartoum Cauthen

Medina, OH 44256-9216

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Lorraine Leavitt

America and Canada have vast gas resources. The greatest danger to the global climate is no longer the developed world, who have flattened their energy use and cleaned their emissions.

The problem which must be met now is the billions of people in Asia, South America and Africa who will need massive amounts of energy in the coming decades. Without access to cheap LNG, they will simply burn coal and other dirty energy sources. If the president really cares about global warming, he will support increased natural gas use worldwide. To date, he has done nothing but fight it!

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting will help my state, New Mexico, generate needed income to support our schools and other aspects of our economy which is important for a poor state like New Mexico. Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Theresa Connaughton  
3 Roy Crawford Ln  
Santa Fe, NM 87505-4576

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Additionally, I do believe in exponentially increasing natural gas usage in our transportation sector as well! LNG/CNG burns approximately 40% cleaner than refined crude oil (gasoline). Another positive is that our terrific U.S.A.. would be far less dependent on foreign sources of fuel for our vital transportation sector. This also lends itself to 1) a more stable pricing structure which, as you may know, is one factor that "markets" absolutely endure themselves to and 2) greater national security as our economy and military would, again, be less dependent on external sources of energy.....and so it goes.

Sincerely,

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Rodica Novak

Fort Pierce, FL 34949-8337

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Richard Travers

Lake Mary, FL 32746-2545

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Nolan Williams

I live in western Colorado where there is an abundance of natural gas. Expanding drilling here and allowing the export of this extra natural gas would be a huge economic boost in my area of the country and all over the rest of the nation.

Sincerely,

Dear Secretary Chu:

As a student of economics and being in favor of improving the economic success of all the people in the USA, I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S. The US should encourage all exports, including energy, as the economic boat of all countries is lifted by greater availability of energy. Self imposed trade barriers results in unintended consequences, including the loss of an opportunity to improve the lives of the lowest economic level of this country.

Exporting LNG is an opportunity for America and should be encouraged, not restricted. Selling our plentiful resources with our trading partners around the world will reduce our country's trade deficit and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed. The Government need not tax citizens to then invest in the means of production, the necessary investment will come from the private sector and provide tax revenue, as opposed to tax increases to pay for government investment.

Exporting LNG is right for America and deserves support from the government.

Sincerely,  
Kurt Yockey

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Mark Moore  
4104 Merriman Loop  
Howell, MI 48843-5210

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Leonard DeGiglio

Terry Hull  
840 Church Ave  
Manhattan, KS 66502-4410

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Edward Blaisdell

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Carolyn Merrill  
3636 W Whitten St

Chandler, AZ 85226-4989

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
paul cerny

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Allen Godin  
PO Box 1385

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
LANA ELMORE

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
John Toth

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Katherine Vindeola

Plus, Co2 is now down to .35 of 1% of the atmosphere and most is natural. Also, water makes up 96% of greenhouse gases. Therefore, Co2 is too small of a portion to affect Global Warming. Besides, plants need something to eat.

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
ted dinkelo

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Virginia Nelson

I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Duane Lee  
1235 N 2nd St  
Union, OR 97883-9209

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. I also assure you as an exploration geologist working in natural gas that the increased market for natural gas will not impact the growing supply of natural gas, other than to stabilize the market and allow gas producers to continue operating without being forced to hold back production artificially. This will translate into more jobs and more income for Americans.

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Gary Wagner

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
James Peoples

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Christian Bardo  
2633 Shenandoah Ave

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Andrew Harrod

Dear Secretary Steven Chu:

Dear Secretary Chu:

I have been personally involved in the LNG and Natural Gas industry, and I am an informed person regarding the benefits of the use of Natural Gas and LNG in supplying homes and businesses with energy to keep them warm, at a reduced cost, and to drive business and employment in this country and around the world.

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

It is time you and your cohorts take a real assessment of the benefits of natural resources and the tremendous strides that have been made in both the safety and economic benefit of the natural gas industry.

Secretary Chu, get on the bank-wagon and stop with the bullshit of following the progressive agenda to shut down the industries that make the world go around!!

Secretary Chu, it is time you become an adult and stop acting like a puppet just to secure a position and a paycheck.

Sincerely,  
Richard Waide  
4029 Rifle Creek Trl

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Additionally, exporting this resource will create an increase in demand that will result in more exploration and drilling. This will ultimately increase the supply of natural gas. Prices will be held in check because of the increase in supply. Without increasing the supply, prices will eventually increase. Exporting the natural gas is one of several options to increase the supply and keep prices from increasing. Your support in the export to natural gas in liquid form will ultimately benefit all Americans and improve the environment. The environment will be improved because the importing nations for our LNG will replace their coal and oil usage which will reduce air pollution and carbon in the atmosphere

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Ruby, SC 29741-8756

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
James Matson  
2524 S Yates St  
Denver, CO 80219-5617

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
louis tuorto

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Robert Hinson  
25027 Haverford Rd  
Spring, TX 77389-2940

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Terry Pryor  
817 Sycamore Creek Rd  
Allen, TX 75002-2248

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Dan Rykard

Dear Secretary Steven Chu:

Dear Secretary Chu:

The United States should be the number one supplier of energy to the world! Only the federal government prevents this. We know that it is possible to fully exploit all of our natural resources without significantly endangering the environment. And the benefits extend well beyond the obvious economic benefits. It could change our relationships with China, India, and other energy-hungry emerging economies.

Full-scale energy exploitation could also provide a very powerful tool to influence middle eastern nations such as Saudi Arabia. Imagine pressuring the Saudis to stop teaching hatred of Jews in their schools, or risk the consequences of sub-\$25 per barrel becoming the permanent price of oil! Ditto for Iran and other nations who blame their failures on the U.S. and Israel. And the influence could be effective with Russia, Venezuela and other nations who depend on high oil prices.

LNG is important, but is only a part of this situation. We need to allow the energy companies to do what they do best: find and extract as much energy resources as possible.

The rest of this letter consists of recommended wording:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Rita Riola  
4901 Green River Rd  
Corona, CA 92880-0627

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
George Cook  
506 Viewpoint Ct  
Seneca, SC 29672-2442

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I would like to see you speak with New York's Governor Andrew Cuomo to see will implement Natural Gas Regulations and issue permits to Drill Natural Gas in New York. His delays have hurt local landowners like myself as well as the unemployed while his state is in massive deficits at the same time as having the highest property and pretty much every other tax in the nation. Please tell him to quit stalling in the name of false information and help America become energy independent as well as self sufficient.

Sincerely,  
Vito Randazzo

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Cheryl Owen

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Gary WINTER  
179 Camry Ln  
Grayson, GA 30017-4231

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Leon Lowery  
Cemetery Ln.

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Janece Rieman  
4021 Pinehurst Ct  
Rapid City, 56602-5324

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
John Cornell

Note: I am lazy and so I am letting someone else speak for me. But that does not mean I do not agree with the above whole heartedly! It is foolish, given the powder keg that is the Middle East and the economic condition of this country not to utilize every resource to reduce the trade deficit, dependence on foreign energy and to create American jobs!

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Maureen Terhune  
205 Fred Allen Dr

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Preston O Bray  
5315 Silver Spur Ave  
Colorado Springs, CO 80915-2423

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sad to say I do not think this president is not interested in jobs. I think he likes for people to have to depend on the government.

Sincerely,  
Berniece Trudeau

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Jeff Hall  
2308 Sunset Ln

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,  
Sarita Williams

Dear Secretary Steven Chu:

Dear Secretary Chu:

I am an Energy Citizen, and I support the export of natural gas to strengthen America's economy and create jobs here at home. I was very pleased to learn that the Department of Energy's recent study of exporting liquefied natural gas (LNG) found that it will likely provide net economic benefit to the U.S.

Exporting LNG is an amazing opportunity for America and should be allowed without unnecessary restriction. Sharing our plentiful resources with our trading partners around the world will reduce our country's trade deficit. Producing more clean burning natural gas will also help reduce global greenhouse gas emissions and create tens of thousands of jobs here at home.

Minimizing or eliminating barriers to trade will drive investment in America's energy industry and make the best possible use of both the abundant resources we are so fortunate to have as well as the technology we have developed.

I urge you to stand by these findings and share them with other leaders in Washington and across the country. Exporting LNG is right for America and deserves support from the government. I am grateful for the hard work of your team at the Department of Energy.

Sincerely,
